# 1. Introduction

# 1.1. Scope

This document is aimed in providing an detailed specification and a comprehensive listing as a reference for the whole set of AT command

# 1.2. Audience

Readers of this document should be familiar with Telit modules and their ease of controlling by means of AT Commands.

# **1.3.** Contact Information, Support

For general contact, technical support, to report documentation errors and to order manuals, contact Telit Technical Support Center (TTSC) at:

TS-EMEA@telit.com TS-NORTHAMERICA@telit.com TS-LATINAMERICA@telit.com TS-APAC@telit.com

Alternatively, use:

http://www.telit.com/en/products/technical-support-center/contact.php

For detailed information about where you can buy the Telit modules or for recommendations on accessories and components visit:

http://www.telit.com

To register for product news and announcements or for product questions contact Telit Technical Support Center (TTSC).

Our aim is to make this guide as helpful as possible. Keep us informed of your comments and suggestions for improvements.

Telit appreciates feedback from the users of our information.

# 1.4. Document Organization

This document contains the following chapters:

<u>Chapter 1: "Introduction"</u> provides a scope for this document, target audience, contact and support information, and text conventions.

Chapter 2: "Overview" about the aim of this document and implementation suggestions.

Chapter 3: "AT Commands" The core of this reference guide.

# **1.5.** Text Conventions

<u>Danger – This information MUST be followed or catastrophic equipment failure or bodily</u> <u>injury may occur.</u>

0

Caution or Warning – Alerts the user to important points about integrating the module, if these points are not followed, the module and end user equipment may fail or malfunction.

Tip or Information – Provides advice and suggestions that may be useful when integrating the module.

All dates are in ISO 8601 format, i.e. YYYY-MM-DD.

# 2. Overview

# 2.1. About the document

This document is to describe all AT commands implemented on the Telit wireless modules listed on the Applicabilty Table.

#### NOTE:

Telit suggests all the system developers to use always the newer AT Commands Interface Style defined by AT#SELINT=2; and in case you are starting a new design we highly recommend you to use the newer AT Commands Interface Style defined by AT#SELINT=2 which gives you a possibility to include all Telit's new features and also all future implementations.

Moreover, Telit suggests to use the following settings to get the performance most customers are looking for:

#### AT#SMSMODE=1 AT#REGMODE=1

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

# **3.** AT COMMANDS

The Telit wireless module family can be controlled via the serial interface using the standard AT commands<sup>1</sup>. The Telit wireless module family is compliant with:

- 1. Hayes standard AT command set, in order to maintain the compatibility with existing SW programs.
- 2. 3GPP TS 27.007 specific AT command and GPRS specific commands.
- 3. 3GPP TS 27.005 specific AT commands for SMS (Short Message Service) and CBS (Cell Broadcast Service)
- 4. FAX Class 1 compatible commands

Moreover Telit wireless module family supports also Telit proprietary AT commands for special purposes.

The following is a description of how to use the AT commands with the Telit wireless module family.

# **3.1. Definitions**

The following syntactical definitions apply:

- <CR> Carriage return character, is the command line and result code terminator character, which value, in decimal ASCII between 0 and 255, is specified within parameter S3. The default value is 13.
- <LF> Linefeed character, is the character recognised as line feed character. Its value, in decimal ASCII between 0 and 255, is specified within parameter S4. The default value is 10. The line feed character is output after carriage return character if verbose result codes are used (V1 option used) otherwise, if numeric format result codes are used (V0 option used) it will not appear in the result codes.
- <...> Name enclosed in angle brackets is a syntactical element. They do not appear in the command line.
- [...] Optional subparameter of a command or an optional part of TA information response is enclosed in square brackets. Brackets themselves do not appear in the command line. When subparameter is not given in AT commands which have a Read command, new value equals to its previous value. In AT commands which do not store the values of any of their subparameters, and so have not a Read command, which are called *action type* commands, action should be done on the basis of the recommended default setting of the subparameter.

<sup>&</sup>lt;sup>1</sup> The AT is an ATTENTION command and is used as a prefix to other parameters in a string. The AT command combined with other parameters can be set up in the communications package or typed in manually as a command line instruction.combined with other parameters can be set up in the communications package or typed in manually as a command line command line instruction.

page 22 of 717

# **3.2.** AT Command Syntax

The syntax rules followed by Telit implementation of either Hayes AT commands, GSM commands and FAX commands are very similar to those of standard basic and extended AT commands. A special command (**#SELINT**, see §3.5.2.1.1) has been introduced in order to have an AT interface very close to the standard one.

There are two types of extended command:

- Parameter type commands. This type of commands may be "set" (to store a value or values for later use), "read" (to determine the current value or values stored), or "tested" (to determine ranges of values supported). Each of them has a test command (trailing =?) to give information about the type of its subparameters; they also have a Read command (trailing ?) to check the current values of subparameters.
- Action type commands. This type of command may be "executed" or "tested".
- "executed" to invoke a particular function of the equipment, which generally involves more than the simple storage of a value for later use
- "tested" to determine:

(if the command #SELINT=0 or #SELINT=1 has been issued, see §3.5.2.1.1) if subparameters are associated with the action, the ranges of subparameters values that are supported; if the command has no subparameters, issuing the correspondent Test command (trailing =?) raises the result code "ERROR".

Note: issuing the Read command (trailing ?) causes the command to be executed.

#### (if the command **#SELINT=2** has been issued, see §3.5.2.1.1)

whether or not the equipment implements the Action Command (in this case issuing the correspondent Test command - trailing =? - returns the **OK** result code), and, if subparameters are associated with the action, the ranges of subparameters values that are supported.

Action commands don't store the values of any of their possible subparameters.

#### Moreover:

• (for #SELINT=0 or #SELINT=1 only)

An enhanced test command (trailing =??) has been introduced to maintain backward compatibility for those commands whose subparameters changed the range of possible values from version to version.

• (for #SELINT=2 only)

The response to the Test Command (trailing =?) may be changed in the future by Telit to allow the description of new values/functionalities

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 23 of 717

• (for #SELINT=2 only)

If all the subparameters of a parameter type command +CMD are optional, issuing AT+CMD=<CR> causes the OK result code to be returned and the previous values of the omitted subparameters to be retained.

# **3.2.1.** String Type Parameters

A string, either enclosed between quotes or not, is considered to be a valid string type parameter input. According to V25.ter space characters are ignored on the command line and may be used freely for formatting purposes, unless they are embedded in numeric or quoted string constants; therefore a string containing a space character has to be enclosed between quotes to be considered a valid string type parameter (e.g. typing AT+COPS=1,0,"A1" is the same as typing AT+COPS=1,0,A1; typing AT+COPS=1,0,"A BB" is different from typing AT+COPS=1,0,A BB).

When **#SELINT=0 (or 1)** mode is selected, a string not enclosed between quotes is changed in upper case (e.g. **mickey** become **MICKEY**), while a string enclosed between quotes is case sensitive.

When **#SELINT=2** mode is selected, a string is always case sensitive.

A small set of commands requires always to write the input string parameters within quotes: this is explicitly reported in the specific descriptions.

# 3.2.2. Command Lines

A command line is made up of three elements: the **prefix**, the **body** and the **termination character**.

The **command line prefix** consists of the characters "**AT**" or "**at**", or, to repeat the execution of the previous command line, the characters "**A**/" or "**a**/" or **AT**#/ or **at**#/.

The **termination character** may be selected by a user option (parameter S3), the default being **<CR>**.

The basic structures of the command line are:

- ATCMD1<CR> where AT is the command line prefix, CMD1 is the body of a **basic** command (nb: the name of the command never begins with the character "+") and <CR> is the command line terminator character
- ATCMD2=10<CR> where 10 is a subparameter
- AT+CMD1;+CMD2=, ,10<CR> These are two examples of extended commands (nb: the name of the command always begins with the character "+"<sup>2</sup>). They are delimited with semicolon. In the second command the subparameter is omitted.

<sup>&</sup>lt;sup>2</sup> The set of **proprietary AT commands** differentiates from the standard one because the name of each of them begins with either "@", "#", "\$" or "\*". **Proprietary AT commands** follow the same syntax rules as **extended commands** 

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 24 of 717

- +CMD1?<CR> This is a Read command for checking current subparameter values
- +CMD1=?<CR> This is a test command for checking possible subparameter values

These commands might be performed in a single command line as shown below:

#### ATCMD1 CMD2=10+CMD1;+CMD2=, ,10;+CMD1?;+CMD1=?<CR>

anyway it is always preferable to separate into different command lines the basic commands and the extended commands; furthermore it is suggested to avoid placing several action commands in the same command line, because if one of them fails, then an error message is received but it is not possible to argue which one of them has failed the execution.

If command V1 is enabled (verbose responses codes) and all commands in a command line has been performed successfully, result code <CR><LF>OK<CR><LF> is sent from the TA to the TE, if subparameter values of a command are not accepted by the TA or command itself is invalid. command cannot be performed for some reason. result code or <CR><LF>ERROR<CR><LF> is sent and no subsequent commands in the command line are processed.

If command V0 is enabled (numeric responses codes), and all commands in a command line has been performed successfully, result code 0 < CR > is sent from the TA to the TE, if sub-parameter values of a command are not accepted by the TA or command itself is invalid, or command cannot be performed for some reason, result code 4 < CR > and no subsequent commands in the command line are processed.

In case of errors depending on ME operation, **ERROR** (or 4) response may be replaced by +CME ERROR: <err> or +CMS ERROR: <err>.

#### NOTE:

The command line buffer accepts a maximum of 400 characters. If this number is exceeded none of the commands will be executed and TA returns **ERROR**.

#### 3.2.2.1. ME Error Result Code - +CME ERROR: <err>

This is NOT a command, it is the error response to +**Cxxx 3GPP TS 27.007** commands. Syntax: +**CME ERROR: <err>** Parameter: **<err>** - error code can be either numeric or verbose (see +**CMEE**).The possible values of **<err>** are reported in the table:

#### 3.2.2.2. Message Service Failure Result Code - +CMS ERROR: <err>

This is NOT a command, it is the error response to +Cxxx 3GPP TS 27.005 commands.

#### Syntax: +CMS ERROR: <err>

Parameter: **<err> -** numeric error code.

The **<err>** values are reported in the table:

Numeric Format	Meaning	
0127	GSM 04.11 Annex E-2 values	
128255	3GPP TS 23.040 sub clause 9.2.3.22	
	values	
300	ME failure	
301	SMS service of ME reserved	
302	operation not allowed	
303	operation not supported	
304	invalid PDU mode parameter	
305	invalid text mode parameter	
310	SIM not inserted	
311	SIM PIN required	
312	PH-SIM PIN required	
313	SIM failure	
314	SIM busy	
315	SIM wrong	
316	SIM PUK required	
317	SIM PIN2 required

Numeric Format	Meaning
318	SIM PUK2 required
320	memory failure
321	invalid memory index
322	memory full
330	SMSC address unknown
331	no network service
332	network time-out
500	unknown error
512	FDN not allowed number

# **3.2.3.** Information Responses And Result Codes

The TA response, in case of verbose response format enabled, for the previous examples command line could be as shown below:

- information response to +CMD1?
   <CR><LF>+CMD1:2,1,10<CR><LF>
- information response to +CMD1=?

<CR><LF>+CMD1(0-2),(0,1),(0-15)<CR><LF>

• final result code <CR><LF>OK<CR><LF>

Moreover there are other two types of result codes:

- *result codes* that inform about progress of TA operation (e.g. connection establishment **CONNECT**)
- *result codes* that indicate occurrence of an event not directly associated with issuance of a command from TE (e.g. ring indication **RING**).

Here the basic result codes according to ITU-T V25Ter recommendation

Result Codes		
Numeric form	Verbose form	
0	OK	
	CONNECT	
1	or	
	CONNECT <text><sup>3</sup></text>	
2	RING	
3	NO CARRIER	
4	ERROR	
5	CONNECT 1200 <sup>4</sup>	

<sup>3</sup> For SELINT 0,1 <text> is only "300"; for SELINT 2 <text> can be"300", "1200", "2400", "4800", "9600", "14400" or "1200/75"

<sup>4</sup> Valid for SELINT 0,1 only

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

Result Codes		
6	NO DIALTONE	
7	BUSY	
8	NO ANSWER	
10	CONNECT 2400 <sup>4</sup>	
11	CONNECT 4800 <sup>4</sup>	
12	CONNECT 9600 <sup>4</sup>	
15	CONNECT 14400 <sup>4</sup>	
23	CONNECT 1200/75 <sup>4</sup>	

# 3.2.4. Command Response Time-Out

Every command issued to the Telit modules returns a result response, if response codes are enabled (default). The time needed to process the given command and return the response varies, depending on the command type. Commands that do not interact with the SIM or the network, and only involve internal setups or readings, have an immediate response. Commands that interact with the SIM or the network could take many seconds to send a response, depending on SIM configuration (e.g., number of contacts stored in the phonebook, number of stored SMS), or on the network the command may interact with.

In the table below are listed only the commands whose interaction with the SIM or the network could lead to long response timings. When not otherwise specified, timing is referred to set command.

For phonebook and SMS writing and reading related commands, timing is referred to commands issued after phonebook sorting is completed.

For DTMF sending and dialling commands timing is referred to module registered on network ("AT+CREG?" answer is "+CREG: 0,1" or "+CREG: 0,5").

For Python commands, timing is referred to commands issued with module in idle, flash memory not full and not fragmented, and after the first Python command. The first Python command to be issued causes a system initialization that could last a couple of minutes. Baud rate is fixed at 115200.

Command	Estimated maximum time to get response (Seconds)	
+COPS	30 (test command)	
+CLCK	25 (SS operation) 5 (FDN enabling/disabling)	
+CLAC	5	
+CPWD	15 (SS operation) 5 (PIN modification)

#DSCRIPT	120	

# 3.2.5. Command Issuing Timing

The chain Command -> Response shall always be respected and a new command must not be issued before the module has terminated all the sending of its response result code (whatever it may be).

This applies especially to applications that "sense" the **OK** text and therefore may send the next command before the complete code **<CR><LF>OK<CR><LF>** is sent by the module.

It is advisable anyway to wait for at least 20ms between the end of the reception of the response and the issue of the next AT command.

If the response codes are disabled and therefore the module does not report any response to the command, then at least the 20ms pause time shall be respected.

During command mode, due to hardware limitations, under severe CPU load the serial port can loose some characters if placed in autobauding at high speeds. Therefore if you encounter this problem fix the baud rate with **+IPR** command.

#### NOTE:

If URCs are enabled (e.g. #QSS, +CMTI, etc. ), it may happen that an URC is displayed between the AT string (e.g. AT+CREG?<CR>) entered and the AT answer (e.g. <CR><LF>+CREG:0,1<CR><LF><CR><LF>OK<CR><LF>). This may happen if only A or AT are sent to the AT port; it does not happen if AT+, AT#, AT\$, etc. are sent to the AT port.

# 3.3. Storage

# **3.3.1.** Factory Profile And User Profiles

The Telit wireless modules stores the values set by several commands in the internal non volatile memory (NVM), allowing to remember this setting even after power off. In the NVM these values are set either as **factory profile** or as **user profiles**: there are **two customizable user profiles** and **one factory profile** in the NVM of the device: by default the device will start with user profile 0 equal to factory profile.

For backward compatibility each profile is divided into two sections, one **base section** which was historically the one that was saved and restored in early releases of code, and the **extended section** which includes all the remaining values.

The **&W** command is used to save the actual values of **both sections** of profiles into the NVM user profile.

Commands &Y and &P are both used to set the profile to be loaded at startup. &Y instructs the device to load at startup only the **base section**. &P instructs the device to load at startup the full profile: **base + extended sections**.

The **&F** command resets to factory profile values only the command of the base section of profile, while the **&F1** resets to factory profile values the full set of base + extended section commands.

The values set by other commands are stored in NVM outside the profile: some of them are stored always, without issuing any &W, some other are stored issuing specific commands (+CSAS, #SLEDSAV, #VAUXSAV, #SKTSAV, #ESAV, #PSAV and \$GPSSAV); all of these values are read at power-up.

The values set by following commands are stored in the profile base section; if **#SELINT=2** they depend on the specific AT instance:

GSM DATA MODE	+CBST
AUTOBAUD	+IPR
COMMAND ECHO	Е
RESULT MESSAGES	Q
VERBOSE MESSAGES	V
EXTENDED MESSAGES	Х
FLOW CONTROL OPTIONS	&K, +IFC
DSR (C107) OPTIONS	&S
DTR (C108) OPTIONS	&D
RI (C125) OPTIONS	\R
POWER SAVING	+CFUN
DEFAULT PROFILE	&Y0
S REGISTERS	S0;S2;S3;S4;S5;S7;S12;S25;S30;S38
CHARACTER FORMAT	+ICF

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 35 of 717

The values set by following commands are stored in the profile extended section and, if the newer AT command interface style has been selected (see **#SELINT=2**), they depend on the specific AT instance (see **+CMUX**):

+FCLASS	+ILRR	+DR
+CSCS	+CR	+CRLP
+CRC	+CSNS	+CVHU
+CREG	+CLIP	+CLIR
+CCWA	+CUSD	+CAOC
+CSSN	+CIND	+CMER
+CPBS	+CMEE	+CGREG
+CGEREP	+CMGF	+CSDH
+CNMI	#QSS	#ACAL <sup>5</sup>
#TEMPMON <sup>6</sup>	#ACALEXT	#ECAM
#SMOV	#MWI	#NITZ
#SKIPESC	#E2ESC	#STIA
\$GPSNMUN	#CESTHLCK	#CFLO
+CSTF	+CSDF	+CTZU
+CAPD	+CCWE	+CSIL
+CTZR	#CFF	#CODECINFO
#CMEEMODE	#MMSSNH	

The values set by following commands are stored in the profile extended section and they don't depend on the specific AT instance (see +**CMUX**):

+CALM	+CRSL	+CMUT <sup>5</sup>
+CLVL <sup>5</sup>	+VTD	$+CSCB^7$
#CAP <sup>5</sup>	#SRS <sup>5</sup>	#SRP <sup>5</sup>
#STM <sup>5</sup>	#DVI	#E2SMSRI
#DAC	#CODEC	#E2SIVISICI #SHFEC <sup>5</sup>
-		
#HFMICG <sup>5</sup>	#HSMICG	#SHFSD <sup>5</sup>
#SPKMUT	#NITZ	#E2SLRI
#SIMDET	#TEMPMON <sup>6</sup>	#PSEL
#HFRECG	#HSRECG	#SHFAGC
#SHSAGC	#SHSEC	#SHSNR
#SHFNR	#SHSSD	#TSVOL
#CPUMODE	#DVIEXT	<b>#PSMRI</b>
#STTA	#SIDETG	

The values set by following commands are automatically stored in NVM, without issuing any storing command and independently from the profile (unique values), and are automatically restored at startup:

<sup>7</sup> +CSCB is still stored in the profile extended section only for backward compatibility issues: its actual storing and restoring are accomplished issuing +CSAS and +CRES

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved

page 36 of 717

<sup>&</sup>lt;sup>5</sup> If **#SELINT=2** they depend on the CMUX 0 instance only

<sup>&</sup>lt;sup>6</sup> It is partially stored in NVM, moreover only a part of it can depend on the specific CMUX instance; see command description.

80000ST10025a Rev. 24 - 2016-09-07

#SELINT	+COPS <sup>8</sup>	+CGCLASS
+CGDCONT	+CGQMIN	+CGQREQ
#REGMODE	<b>#PLMNODE</b>	#COPSMODE
#DIALMODE	#BND	#AUTOBND
#ENS	#SCFG	#JDR
#ENHSIM	#AUTOATT	#TXMONMODE
#TTY	#ICMP	#GSMCONT
#NWSCANTMR	#SMSMODE	#DNS
#TCPMAXDAT	<b>#TCPREASS</b>	#SWLEVEL
#CPASMODE	#FASTCCID	+CGSMS
#V24MODE	+CPLS	#SIMINCFG
#RS485		

The values set by following commands are stored in NVM on demand, issuing specific commands and independently from the profile:

+CSCA +CSMP +CSCB
-------------------

stored by +CSAS<sup>9</sup> command and restored by +CRES<sup>9</sup> command

#SLED	

stored by #SLEDSAV10 command

	#VAUX		
--	-------	--	--

stored by #VAUXSAV11 command

#USERID	#PASSW	#PKTSZ
#DSTO	#SKTTO	#SKTSET
#SKTCT		

stored by #SKTSAV command and automatically restored at startup; factory default valutes are restored by #SKTRST command

#ESMTP	#EADDR	#EUSER
#EPASSW		

stored by #ESAV command and automatically restored at startup; factory default valutes are restored by #ERST command.

\$GPSP	\$GPSD	\$GPSAT
\$GPSCON		

stored by \$GPSSAV command and automatically restored at startup; factory default valutes are restored by \$GPSRST command

#BIQUADIN	# BIQUADINEX	# BIQUADOUT
<b># BIQUADOUTEX</b>		

stored by #PSAV command and automatically restored at startup; factory default valutes are restored by #PRST command.

<sup>8</sup> It is partially stored in NVM; see command description.

<sup>9</sup> Both commands +**CSAS** (see §3.x.3.2.5) and +**CRES** (see §3.x.3.2.6) deal with non-volatile memory, intending for it either the NVM and the SIM storage.

<sup>10</sup> Valid for **#SELINT=2** only.

<sup>11</sup> Valid for **#SELINT=2** only.

AT Commands Reference Guide 80000ST10025a Rev. 24 – 2016-09-07

# **3.5.** AT Commands References

# **3.5.1.** Command Line General Format

#### 3.5.1.1. Command Line Prefixes

#### 3.5.1.1.1. Starting A Command Line - AT

AT - Starting A Comm	and Line	<b>SELINT 0 / 1 / 2</b>
	The prefix AT, or at, is a two-character abbreviation (ATtention	
	start a command line to be sent from TE to TA, with the only exc	ception of AT#/
	prefix	
Reference	3GPP TS 27.007	

#### 3.5.1.1.2. Last Command Automatic Repetition - A/

A/ - Last Command Au	itomatic Repetition	<mark>SELINT 0 / 1 / 2</mark>
A/	<ul> <li>A/ If the prefix A/ or a/ is issued, the MODULE immediately execute once again the body of the preceding command line. No editing is possible and no termination character is necessary. A command line may be repeated multiple times through this mechanism, if desired.</li> <li>If A/ is issued before any command line has been executed, the preceding command line is assumed to have been empty (that results in an OK result code).</li> <li>Note: this command works only at fixed IPR.</li> <li>Note: the custom prefix AT#/ has been defined: it causes the last command to be executed again too; but it doesn't need a fixed IPR.</li> </ul>	
Reference	V25ter	

#### 3.5.1.1.3. Repeat Last Command - AT#/

AT#/ - Repeat Last Co	mmand	<mark>SELINT 0 / 1 / 2</mark>
AT#/	The prefix is used to execute again the last received command.	

# **3.5.2.** General Configuration Commands

#### 3.5.2.1. AT Interface Backward Compatibility

There are some slight modifications amongst the AT interfaces of Telit products. In order to keep backward compatibility and on the same time to give the opportunity to the customer to get competitor compatibility, Telit modules offer the specific command **#SELINT** to switch the behaviour of the device and its AT command interface. It is up to the user to select the AT interface he prefers.

80000ST10025a Rev. 24 - 2016-09-07

# **3.5.2.1.1.** Select Interface Style - #SELINT

<b>#SELINT - Select Inte</b>	erface Style SELINT 0 / 1
AT#SELINT[= <v>]</v>	Set command sets the AT command interface style depending on parameter $\langle v \rangle$ .
	Parameter:
	<v> - AT command interface style</v>
	0 - switches the AT command interface of the products, to the GM862-GSM and GM862-GPRS interface style
	1 - switches the AT command interface of the products, to the GM862-PCS, PYTHON, QUAD-PY, TRIZIUM and GE863-QUAD, PY interface style
	2 - switches the AT command interface style of the product, to the new products like GE864, GC864 and the GPS products <sup>37</sup>
	Note: If parameter is omitted then the behaviour of Set command is the same as read command.
AT#SELINT?	Read command reports the current interface style.
AT#SELINT=?	Test command reports the available range of values for parameter <i><v></v></i> .
Note	It's suggested to reboot the module after every <b>#SELINT</b> setting.

#SELINT - Select Inte	rface Style	<mark>SELINT 2</mark>
AT#SELINT=[ <v>]</v>	Set command sets the AT command interface style depending or	n parameter <b><v></v></b> .
	Parameter:	
	<v> - AT command interface style</v>	
	0 - switches the AT command interface of the products, to the C GM862-GPRS interface style	GM862-GSM and
	1 - switches the AT command interface of the products, to the C PYTHON, QUAD-PY, TRIZIUM and GE863-QUAD, PY	
	<ul> <li>2 - switches the AT command interface style of the product, to the r like GE864, GC864 and the GPS products<sup>12</sup></li> </ul>	
	ince GL804, GC804 and the GL8 products	
AT#SELINT?	Read command reports the current interface style.	
AT#SELINT=?	Test command reports the available range of values for parameter	er <v>.</v>
Note	It's suggested to reboot the module after every #SELINT setting	ŗ.
Note	Issuing AT#SELINT= <v> when the 3GPP TS 27.010 multiplex</v>	ing protocol
	control channel has been enabled (see +CMUX) causes an ERR	<b>OR</b> result code to
	be returned.	
Note	Issuing AT#SELINT= <v> when the ENS functionality has been</v>	n previously
	enabled (see #ENS) causes an ERROR result code to be returne	d.
Note	Issuing AT#SELINT= <v> when the SMS Commands Operation</v>	n Mode has been
	previously enabled (see <u>#SMSMODE</u> ) causes an ERROR resul	t code to be
	returned.	

<sup>37</sup> Under the **#SELINT=2**, all the new functionalities like CMUX, SAP, Multisocket are available. Moreover, all the AT commands have been improved according to the ETSI specifications.

**AT Commands Reference Guide** 80000ST10025a Rev. 24 – 2016-09-07

# **3.5.3.** Hayes Compliant AT Commands

#### 3.5.3.1. Generic Modem Control

# 3.5.3.1.1. Set To Factory-Defined Configuration - &F

&F - Set To Factory-	Defined Configuration         SELINT 0 / 1 / 2
AT&F[ <value>]</value>	Execution command sets the configuration parameters to default values specified by manufacturer; it takes in consideration hardware configuration switches and other manufacturer-defined criteria.
	Parameter: <pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
	<ul> <li>0 - just the factory profile base section parameters are considered.</li> <li>1 - either the factory profile base section and the extended section are considered (full factory profile).</li> </ul>
	Note: if parameter <b><value></value></b> is omitted, the command has the same behaviour as <b>AT&amp;F0</b>
Reference	V25ter.

## 3.5.3.1.2. Soft Reset - Z

<mark>Z - Soft Reset</mark>	SELINT 0 / 1 / 2
ATZ[ <n>]</n>	Execution command loads the base section of the specified user profile and the extended section of the default factory profile.
	Parameter:
	<1>>
	01 - user profile number
	Note: any call in progress will be terminated.
	Note: if parameter $\langle n \rangle$ is omitted, the command has the same behaviour as <b>ATZ0</b> .
Reference	V25ter.

#### 3.5.3.1.3. Select Active Service Class - +FCLASS

+FCLASS - Select Ac	+FCLASS - Select Active Service Class	
AT+FCLASS= <n></n>	Set command sets the wireless module in specified connection voice), hence all the calls done afterwards will be data or	
	Parameter:	
	0 - data	
	1 - fax class 1	
	8 - voice	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 55 of 717

80000ST10025a Rev. 24 - 2016-09-07

+FCLASS - Select Active Service Class SELINT 0 / 1 / 2		
AT+FCLASS?	Read command returns the current configuration value of the parameter <b><n></n></b> .	
AT+FCLASS=?	<b>SS=?</b> Test command returns all supported values of the parameters <b><n></n></b> .	
Reference	3GPP TS 27.007	

#### 3.5.3.1.4. Default Reset Basic Profile Designation - &Y

&Y - Default Rese	t Basic Profile Designation SELINT 0/	<mark>1 / 2</mark>
AT&Y[ <n>]</n>	Execution command defines the basic profiles which will be loaded on startup.	
	Parameter: <n> 01 - profile (default is 0): the wireless module is able to store 2 complete configurations (see &amp;W).</n>	
	Note: differently from command <b>Z</b> < <b>n</b> >, which loads just once the desired profit the one chosen through command <b>&amp;Y</b> will be loaded on every startup. Note: if parameter is omitted, the command has the same behaviour as <b>AT&amp;Y</b>	-

# 3.5.3.1.5. Default Reset Full Profile Designation - &P

&P - Default Reset Full Profile Designation SELINT 0		<mark>SELINT 0 / 1 / 2</mark>
AT&P[ <n>]</n>	Execution command defines which full profile will be loaded on s	startup.
	Parameter: < <b>n&gt;</b> 01 – profile number: the wireless module is able to store 2 full of (see command &W).	configurations
	Note: differently from command <b>Z</b> < <b>n</b> >, which loads just once the the one chosen through command <b>&amp;P</b> will be loaded on every star	
	Note: if parameter is omitted, the command has the same behavior	ur as AT&P0
Reference	Telit Specifications	

# 3.5.3.1.6. Store Current Configuration - &W

&W - Store Curre	nt Configuration	<b>SELINT 0 / 1 / 2</b>
AT&W[ <n>]</n>	Execution command stores on profile <b><n></n></b> the complet	e configuration of the device.
	Parameter:	
	<n></n>	
	01 - profile	
	Note: if parameter is omitted, the command has the sar	ne behaviour of AT&W0.

80000ST10025a Rev. 24 - 2016-09-07

#### 3.5.3.1.7. Store Telephone Number - &Z

&Z - Store Telephone	Number In The Wireless Module Internal Phonebook         SELINT 0 / 1 / 2	
AT&Z <n>=<nr></nr></n>	Execution command stores in the record <b><n></n></b> the telephone number <b><nr></nr></b> . The records cannot be overwritten, they must be cleared before rewriting.	
	Parameters: < <b>n&gt;</b> - phonebook record < <b>nr&gt;</b> - telephone number (string type)	
	Note: the wireless module has a built in non volatile memory in which 10 telephone numbers of a maximum 24 digits can be stored	
	Note: to delete the record <b><n></n></b> the command <b>AT&amp;Z<n>=<cr></cr></n></b> must be issued.	
	Note: the records in the module memory can be viewed with the command &N, while the telephone number stored in the record $n$ can be dialed by giving the command <b>ATDS</b> =< $n$ >.	

#### 3.5.3.1.8. Display Stored Numbers - &N

<mark>&amp;N - Display Inte</mark>	rnal Phonebook Stored Numbers	<mark>SELINT 0 / 1 / 2</mark>	
AT&N[ <n>]</n>	Execution command returns the telephone number stored a internal memory.	Execution command returns the telephone number stored at the <b><n></n></b> position in the internal memory.	
	Parameter: <n> - phonebook record number</n>		
	Note: if parameter <b><n></n></b> is omitted then all the internal reco	ords are shown.	

#### 3.5.3.1.9. Manufacturer Identification - +GMI

+GMI - Manufacturer	Identification	<mark>SELINT 0 / 1 / 2</mark>
AT+GMI	Execution command returns the manufacturer identification.	
	Note: this is one of the commands whose output differs dependir <b>#SELINT</b> setting.	ng on the last
Reference	V.25ter	

#### 3.5.3.1.10. Model Identification - +GMM

+GMM - Model Identification SELINT 0 /		<b>SELINT 0 / 1 / 2</b>
AT+GMM	Execution command returns the model identification.	
Reference	V.25ter

80000ST10025a Rev. 24 - 2016-09-07

#### **3.5.3.1.11.** Revision Identification - +GMR

+GMR - Revision Identification S		<b>SELINT 0 / 1 / 2</b>
AT+GMR	Execution command returns the software revision identification.	
Reference	V.25ter	

#### 3.5.3.1.12. Capabilities List - +GCAP

+GCAP - Capabilities	List	<mark>SELINT 0 / 1 / 2</mark>
AT+GCAP	Execution command returns the equipment supported command set list.	
	Where:	
	+CGSM: GSM ETSI command set	
	+FCLASS: Fax command set	
	+DS: Data Service common modem command set	
	+MS: Mobile Specific command set	
Reference	V.25ter	

#### 3.5.3.1.13. Serial Number - +GSN

+GSN - Serial Number		<b>SELINT 0 / 1 / 2</b>
AT+GSN	Execution command returns the device board serial number.	
	Note: The number returned is not the IMSI, it is only the board n	umber
Reference	V.25ter	

#### 3.5.3.1.14. Display Configuration And Profile - &V

<mark>&amp;V - Display C</mark>	&V - Display Current Base Configuration And Profile SELINT 0	
AT&V	Execution command returns some of the base configuration parameters settings.	
	Note: this is one of the commands whose output dis #SELINT setting.	ffers depending on the last
	Note: the row of information about <b>CTS (C106) OPTI</b> only for compatibility reasons and represents only a dur	*

#### **3.5.3.1.15. Display Configuration And Profile - &V0**

&V0 - Display Curre	nt Configuration And Profile	<b>SELINT 0 / 1 / 2</b>
AT&V0	Execution command returns all the configuration parameters set Note: this command is the same as &V, it is included of	C
	compatibility.	ing for backwards

	Note: the row of information about <b>CTS (C106) OPTIONS</b> is ir only for compatibility reasons and represents only a dummy value	*

# 3.5.3.1.16. S Registers Display - &V1

&V1 - S Registe	rs Display SELINT 0 / 1 / 1	2
AT&V1	Execution command returns the value of the S registers in decimal and hexadecim	nal
	value in the format:	
	REG DEC HEX	
	<reg0> <dec> <hex></hex></dec></reg0>	
	<reg1> <dec> <hex></hex></dec></reg1>	
	where	
	< <b>reg</b> <i>n</i> > - <b>S</b> register number	
	000005	
	007	
	012	
	025	
	038	
	<dec> - current value in decimal notation</dec>	
	<hex> - current value in hexadecimal notation</hex>	

#### 3.5.3.1.17. Extended S Registers Display - &V3

&V3 - Extended	S Registers Display	<b>SELINT 0 / 1 / 2</b>
AT&V3	Execution command returns the value of the <b>S</b> value in the format:	registers in decimal and hexadecimal
	REGDECHEX <reg0><dec><hex></hex></dec></reg0>	
	<reg1> <dec> <hex></hex></dec></reg1>	
	where	
	< <b>reg</b> <i>n</i> > - <b>S</b> register number	
	000005	
	007	
	012	
	025	
	030	
	038	
	<dec> - current value in decimal notation</dec>	
	<hex> - current value in hexadecimal notation</hex>

#### 3.5.3.1.18. Display Last Connection Statistics - &V2

&V2 - Display Last Connection Statistics		SELINT 0 / 1 /	<mark>/ 2</mark>
AT&V2	Execution command returns the last connection statistics &	connection fail	ure
	reason.		

#### 3.5.3.1.19. Single Line Connect Message - \V

<b>W - Single Line Connect Message</b>		<mark>SELINT 0 / 1 / 2</mark>
AT\V <n></n>	Execution command set single line connect message.	
	Parameter:	
	<n></n>	
	0 - off	
	1 - on	

# 3.5.3.1.20. Country Of Installation - +GCI

+GCI - Country Of In	stallation	<b>SELINT 0 / 1 / 2</b>
AT+GCI= <code></code>	Set command selects the installation country code according to ITU-T.35 Annex A.	
	Parameter: <code></code>	
	59 - it currently supports only the Italy country code	
AT+GCI?	Read command reports the currently selected country code.	
AT+GCI=?	Test command reports the supported country codes.	
Reference	V25ter.	

#### **3.5.3.1.21.** Line Signal Level - %L

%L - Line Signal Leve		SELINT 0 / 1 / 2
AT%L	It has no effect and is included only for backward compatib	ility with landline
	modems	

# 3.5.3.1.22. Line Quality - %Q

%Q - Line Quality		<b>SELINT 0 / 1 / 2</b>
AT%Q	It has no effect and is included only for backward compatil	oility with landline
	modems

# 3.5.3.1.23. Speaker Loudness - L

L - Speaker Loudness		<mark>SELINT 0 / 1 / 2</mark>
ATL <n></n>	It has no effect and is included only for backward compatil	oility with landline
	modems	

#### **3.5.3.1.24.** Speaker Mode - M

<mark>M - Speaker Mode</mark>		<b>SELINT 0 / 1 / 2</b>
ATM <n></n>	It has no effect and is included only for backward compati- modems	bility with landline

#### 3.5.3.1.25. Master Reset - +CMAR

+CMAR – Master Reset	SELINT 0 / 1
AT+CMAR=< phone lock	This command requests the MT to reset user data. The user data in the
code>	phone will be reset to default values.
	Parameters: < phone lock code> - string type representing an 8 digits security code. It must be verified before performing the master reset.
	Note: issuing the command will cause an NVM formatting. After the formatting is completed the module will automatically reboot. It is strongly recommended to issue an AT+CFUN=4 command before starting to format NVM, in order to not interfere with the formatting process.
	Note: the command is available for SELINT 0 and 1 only in 10.00.xx3 release and onwards.
AT+CMAR=?	Test command tests for command existence.

+CMAR – Master Reset	SELINT 2
AT+CMAR=< phone lock code>	This command requests the MT to reset user data. The user data in the phone will be reset to default values.
	Parameters: < phone lock code> - string type representing an 8 digits security code. It must be verified before performing the master reset.
	Note: issuing the command will cause an NVM formatting. After the formatting is completed the module will automatically reboot. It is strongly recommended to issue an AT+CFUN=4 command before starting to format NVM, in order to not interfere with the formatting process.
AT+CMAR=?	Test command tests for command existence.

#### **3.5.3.2. DTE - Modem Interface Control**

#### **3.5.3.2.1.** Command Echo - E

# E - Command Echo SELINT 0 / 1 / 2 ATE[<n>] Set command enables/disables the command echo. Parameter: <n> 0 - disables command echo 0 - disables command echo 1 - enables command echo (factory default), hence command sent to the device are echoed back to the DTE before the response is given. Note: if parameter is omitted, the command has the same behaviour of ATE0 Reference V25ter

#### 3.5.3.2.2. Quiet Result Codes - Q

<b>Q - Quiet Result Code</b>	S	SELINT 0 / 1
ATQ[ <n>]</n>	Set command enables or disables the result codes.	
	Parameter:	
	$<\mathbf{n}>$	
	<ul> <li>0 - enables result codes (factory default)</li> <li>1 - every result code is replaced with a <cr></cr></li> </ul>	
	2 - disables result codes	
	2 - disables result codes	
	Note: After issuing either ATQ1 or ATQ2 every information te	ext transmitted in
	response to commands is not affected	
	Note: if parameter is omitted, the command has the same behav	iour as ATQ0
Example	After issuing ATQ1	
	AT+CGACT=?	
	+CGACT: (0-1) $a < cr > ends$ the response	
	After issuing ATQ2	
	AT+CGACT=?	
Reference	+CGACT: (0-1) nothing is appended to the response V25ter	
<b>Q - Quiet Result Code</b>		SELINT 2
ATQ[ <n>]</n>	Set command enables or disables the result codes.	
···· ×[ ··· ]		
	Parameter:	
	<1)>	
	0 - enables result codes (factory default)	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 62 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>Q - Quiet Result Codes</b>		SELINT 0 / 1
	1 - disables result codes	
	2 - disables result codes (only for backward compatibility)	
	Note: After issuing either <b>ATQ1</b> or <b>ATQ2</b> every information tex response to commands is not affected	t transmitted in
	Note: if parameter is omitted, the command has the same behavior	our of ATQ0
Example	After issuing ATQ1 or ATQ2	
	AT+CGACT=?	
	+CGACT: (0-1) nothing is appended to the response	
Reference	V25ter	

# 3.5.3.2.3. Response Format - V

<mark>V - Response Format</mark>		SELINT 0 / 1 / 2
ATV[ <n>]</n>	result codes and information respo	ents of the header and trailer transmitted with nses. It also determines if result codes are n alphanumeric form (see [§3.2.3 Information the table of result codes).
	Parameter:	
	< <u>n</u> >	
	0 - limited headers and trailers an	d numeric format of result codes
	information responses	<text><cr><lf></lf></cr></text>
	result codes	<numeric code=""><cr></cr></numeric>
	1 - full headers and trailers and vertice information responses	erbose format of result codes (factory default)
	information responses	<text><cr><lf></lf></cr></text>
	result codes	< <u>CR&gt;<lf></lf></u>
		<pre><verbose code=""><cr><lf></lf></cr></verbose></pre>
	Notes the start nontion of inform	ation responses is not offected by this setting
	Note: the <text> portion of inform</text>	ation responses is not affected by this setting.
		command has the same behaviour of ATV0

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 63 of 717

80000ST10025a Rev. 24 - 2016-09-07

3.5.3.2.4. Extended Result Codes - X

X - Extended Res	sult Codes SELINT 0 / 1 / 2
ATX[ <n>]</n>	Set command selects the result code messages subset used by the modem to inform the <b>DTE</b> of the result of the commands.
	<ul> <li>Parameter:</li> <li><n> - (factory default is 1)</n></li> <li>0 - on entering dial-mode CONNECT result code is given; OK, CONNECT, RING, NO CARRIER, ERROR, NO ANSWER result codes are enabled . Dial tone and busy detection (NO DIALTONE and BUSY result codes) are disabled.</li> <li>14 - on entering dial-mode CONNECT <text> result code is given; all the other result codes are enabled.</text></li> </ul>
	Note: If parameter is omitted, the command has the same behaviour of ATX0
Note	For complete control on <b>CONNECT</b> response message see also + <b>DR</b> command.
Reference	V25ter

## 3.5.3.2.5. Identification Information - I

I - Identification	Information SELINT 0 / 1 / 2
I - Identification ATI[ <n>]</n>	Execution command returns one or more lines of information text followed by a result code. Parameter: <n> 0 - numerical identifier 1 - module checksum 2 - checksum check result</n>
	<ul> <li>3 - manufacturer</li> <li>4 - product name</li> <li>5 - DOB version</li> <li>Note: this is one of the commands whose output differs depending on the last</li> <li>#SELINT setting.</li> <li>Note: if parameter is omitted, the command has the same behaviour of ATI0</li> </ul>
Reference	V25ter

#### **3.5.3.2.6.** Data Carrier Detect (DCD) Control - &C

&C - Data Carrier Detect (DCD) Control		<b>SELINT 0 / 1 / 2</b>
AT&C[ <n>]</n>	Set command controls the RS232 <b>DCD</b> output behaviour.	
	Parameter:	
	<n></n>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 64 of 717

80000ST10025a Rev. 24 - 2016-09-07

&C - Data Carrier Do	etect (DCD) Control	<mark>SELINT 0 / 1 / 2</mark>
	<ul> <li>0 - DCD remains high always.</li> <li>1 - DCD follows the Carrier detect status: if carrier is detected DCD is high, otherwise DCD is low. (factory default)</li> <li>2 - DCD off while disconnecting</li> </ul>	
	Note: if parameter is omitted, the command has the same behavi	iour of AT&C0
Reference	V25ter	

#### 3.5.3.2.7. Data Terminal Ready (DTR) Control - &D

&D - Data Termi	nal Ready (DTR) Control SELINT 0 / 1
AT&D[ <n>]</n>	Set command controls the Module behaviour to the RS232 <b>DTR</b> transitions.
	Parameter:
	<n></n>
	0 - device ignores <b>DTR</b> transitions (factory default)
	1 - when the MODULE is connected, the <b>High</b> to <b>Low</b> transition of <b>DTR</b> pin sets the device in command mode, the current connection is NOT closed
	<ul> <li>2 - when the MODULE is connected, the High to Low transition of DTR pin sets the device in command mode and the current connection is closed</li> <li>3 - device ignores DTR transitions</li> </ul>
	4 - C108/1 operation is disabled
	5 - C108/1 operation is enabled; same behaviour as for $=2$
	Note: if a connection has been set up issuing either <b>#SKTD</b> or <b>#SKTOP</b> , then <b>AT&amp;D1</b> has the same effect as <b>AT&amp;D2</b> .
	Note: if <b>AT&amp;D2</b> has been issued and the <b>DTR</b> has been tied <b>low</b> , autoanswering is inhibited and it is possible to answer only issuing command <b>ATA</b> . Note: if parameter is omitted, the command has the same behaviour as <b>AT&amp;D0</b>
Reference	V25ter

&D - Data Termiı	nal Ready (DTR) Control SELINT 2
AT&D[ <n>]</n>	Set command controls the Module behaviour to the RS232 <b>DTR</b> transitions.
	Parameter:
	<n></n>
	<ul> <li>0 - device ignores DTR transitions (factory default); if +CVHU current setting is different from 2 then every setting AT&amp;D0 is equivalent to AT&amp;D5</li> <li>1 - when the MODULE is connected, the High to Low transition of DTR pin sets the device in command mode, the current connection is NOT closed; if +CVHU current setting is different from 2 then issuing AT&amp;D1 is equivalent to</li> </ul>
	AT&D5
	2 - when the MODULE is connected, the <b>High</b> to <b>Low</b> transition of <b>DTR</b> pin sets the device in command mode and the current connection is closed; if + <b>CVHU</b> current setting is <b>different from 2</b> then issuing <b>AT&amp;D2</b> is equivalent to

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 65 of 717

80000ST10025a Rev. 24 - 2016-09-07

&D - Data Termi	nal Ready (DTR) Control	SELINT 2
	<ul> <li>AT&amp;D5</li> <li>3 - device ignores DTR transitions; if +CVHU current setting is different from 2 then issuing AT&amp;D3 is equivalent to AT&amp;D5</li> <li>4 - C108/1 operation is disabled; if +CVHU current setting is different from 2 then issuing AT&amp;D4 is equivalent to AT&amp;D5</li> <li>5 - C108/1 operation is enabled; same behaviour as for <n>=2</n></li> </ul> Note: if a connection has been set up issuing either #SKTD or #SKTOP, then AT&D1 has the same effect as AT&D2. If a connection has been set up issuing AT#SD then AT&D1 and AT&D2 have different effect, as described above.	
	Note: if <b>AT&amp;D2</b> has been issued and the <b>DTR</b> has been inhibited and it is possible to answer only issuing comma Note: if parameter is omitted, the command has the same	and ATA.
Reference	V25ter	

#### 3.5.3.2.8. Standard Flow Control - \Q

<b>\Q - Standard Flo</b>	w Control SELINT 0 / 1 / 2
AT\Q[ <n>]</n>	Set command controls the RS232 flow control behaviour.
	Parameter:
	<n></n>
	0 - no flow control
	1 - software bi-directional with filtering (XON/XOFF)
	2 - hardware mono-directional flow control (only CTS active)
	3 - hardware bi-directional flow control (both <b>RTS/CTS</b> active) (factory default)
	Note: if parameter is omitted, the command has the same behaviour as AT\Q0
	Note: Hardware flow control (AT\Q3) is not active in command mode.
	Note: \ <b>Q's</b> settings are functionally a subset of <b>&amp;K</b> 's ones.
Reference	V25ter

# 3.5.3.2.9. Flow Control - &K

&K - Flow Control		<mark>SELINT 0 / 1 / 2</mark>
AT&K[ <n>]</n>	Set command controls the RS232 flow control behaviour.	
	Parameter:	
	<n></n>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 66 of 717

80000ST10025a Rev. 24 - 2016-09-07

&K - Flow Control		SELINT 0 / 1 / 2
	0 - no flow control	
	1 - hardware mono-directional flow control (only <b>CTS</b> active)	
	2 - software mono-directional flow control (XON/XOFF)	
	3 - hardware bi-directional flow control (both RTS/CTS active	) (factory default)
	4 - software bi-directional with filtering (XON/XOFF)	· · · · ·
	5 - pass through: software bi-directional without filtering (XON	N/XOFF)
	6 - both hardware bi-directional flow control (both <b>RTS/CTS</b> a bi-directional flow control ( <b>XON/XOFF</b> ) with filtering	
	Note: if parameter is omitted, the command has the same behavi	our as AT&K0
	Note: <b>&amp;K</b> has no Read Command. To verify the current setting check the settings of the active profile issuing <b>AT&amp;V</b> .	of <b>&amp;K</b> , simply
	Note: Hardware flow control (AT&K3) is not active in comman	d mode.

# 3.5.3.2.10. Data Set Ready (DSR) Control - &S

&S - Data Set Rea	ndy (DSR) Control SELINT 0 / 1 / 2
AT&S[ <n>]</n>	Set command controls the RS232 <b>DSR</b> pin behaviour.
	Parameter:
	<n></n>
	0 - always <b>High</b>
	1 - follows the GSM traffic channel indication.
	2 - High when connected
	3 - <b>High</b> when device is ready to receive commands (factory default).
	Note: if option 1 is selected then <b>DSR</b> is tied <b>High</b> when the device receives from the network the GSM traffic channel indication.
	Note: in power saving mode the <b>DSR</b> pin is always tied <b>Low</b> .
	Note: if parameter is omitted, the command has the same behaviour of AT&S0
	Note: If Selint=2 is selected, and option 1 and 2 are active, <b>DSR</b> will not tied <b>High</b> in case of GSM voice connection

# 3.5.3.2.11. Ring (RI) Control - \R

<b>\R - Ring (RI) Control</b>		<mark>SELINT 0 / 1 / 2</mark>
AT\R[ <n>]</n>	Set command controls the <b>RING</b> output pin behaviour.	
	Parameter:	
	<n></n>	
	0 - <b>RING</b> on during ringing and further connection	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 67 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>\R - Ring (RI) Control</b>		<b>SELINT 0 / 1 / 2</b>
	1 - <b>RING</b> on during ringing (factory default)	
	2 - <b>RING</b> follows the ring signal	
	Note: to check the ring option status use the <b>&amp;V</b> command.	
	Note: if parameter is omitted, the command has the same behavi	our of AT\R0

#### **3.5.3.2.12.** Fixed DTE Interface Rate - +IPR

+IPR - Fixed DTE	Interface Rate SELINT 0 / 1
AT+IPR= <rate></rate>	Set command specifies the DTE speed at which the device accepts commands
	during command mode operations; it may be used to fix the DTE-DCE interface
	speed.
	Parameter:
	<rate></rate>
	0
	300
	1200
	2400
	4800
	9600
	19200
	38400
	57600
	115200
	If <b><rate></rate></b> is set to 0, then automatic speed detection is enabled and also character
	format (see +ICF) is set to auto-detect. (default)
	If <b><rate></rate></b> is specified and not 0, <b>DTE-DCE</b> speed is fixed at that speed,
	hence no speed auto-detection (autobauding) is enabled.
	Note: While in autobauding mode the 300 baud rate is not supported.
AT+IPR?	Read command returns the current value of + <b>IPR</b> parameter.
AT+IPR=?	Test command returns the supported serial port speed list.
Reference	V25ter

+IPR - Fixed DTE Interface Rate SELINT 2		
AT+IPR= <rate></rate>	Set command specifies the <b>DTE</b> speed at which the dev during command mode operations; it may be used to fix speed.	
	Parameter: < <b>rate&gt;</b> 0 (default; not supported for 13.00.xxx SW version) 300

#### **3.5.3.2.13.** DTE-Modem Local Flow Control - +IFC

+IFC - DTE-Modem L	ocal Flow Control	SELINT 0 / 1 / 2
AT+IFC= <by_te>,</by_te>	Set command selects the flow control behaviour of the serial p	ort in both directions:
<by_ta></by_ta>	from <b>DTE</b> to <b>modem</b> ( <b><by_ta></by_ta></b> option) and from <b>modem</b> to <b>DTE</b> ( <b><by_te></by_te></b> )	
	Parameters: <by_te> - flow control option for the data received by DTE 0 - flow control None 1 - XON/XOFF filtered 2 - C105 (RTS) (factory default) 3 - XON/XOFF not filtered <by_ta> - flow control option for the data sent by modem 0 - flow control None</by_ta></by_te>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 69 of 717

80000ST10025a Rev. 24 - 2016-09-07

+IFC - DTE-Moo	lem Local Flow Control	SELINT 0 / 1 / 2
	1 - XON/XOFF	
	2 - C106 (CTS) (factory default)	
	Note: Hardware flow control (AT+IFC=2,2) is not ad	ctive in command mode.
	Note: This command is equivalent to <b>&amp;K</b> command.	
AT+IFC?	Read command returns active flow control settings.	
	Note: If flow control behavior has been set with AT&	Kn command
	with the parameter that is not allowed by <b>AT+IFC</b> the command <b>AT+IFC</b> ? will return:	he read
	+IFC: 0,0	
AT+IFC=?	Test command returns all supported values of the par	ameters <b><by_te></by_te></b> and
	<by_ta>.</by_ta>	
Reference	V25ter	

# 3.5.3.2.14. DTE-Modem Local Rate Reporting - +ILRR

+ILRR - DTE-Modem	Local Rate Reporting	<b>SELINT 0 / 1 / 2</b>
AT+ILRR= <n></n>	Set command controls whether or not the <b>+ILRR: <rate></rate></b> inform transmitted from the <b>modem</b> (module) to the <b>DTE</b> . Parameter: < <b>n&gt;</b> 0 - local port speed rate reporting disabled (factory default) 1 - local port speed rate reporting enabled Note: If <b>AT+IPR=0</b> (in autobauding) local port speed reported w	
	Note: this information if enabled is sent upon connection.	
AT+ILRR?	Read command returns active setting of <b><n></n></b> .	
AT+ILRR=?	Test command returns all supported values of the parameter <n></n>	>
Reference	V25ter	

# 3.5.3.2.15. DTE-Modem Character Framing - +ICF

+ICF - DTE-Modem	Character Framing	<b>SELINT 0 / 1 / 2</b>
AT+ICF= <format> [,<parity>]Set command defines the asynchronous character framing to be used whe autobauding is disabled.</parity></format>		be used when
	<ul> <li>Parameters:</li> <li><format> - determines the number of bits in the data bits, the bit, and the number of stop bits in the start-stop fr</format></li> <li>0 - autodetection (not available for 13.00.xxx SW releases)</li> <li>1 - 8 Data, 2 Stop</li> </ul>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 70 of 717

80000ST10025a Rev. 24 - 2016-09-07

+ICF - DTE-Mod	lem Character Framing	<b>SELINT 0 / 1 / 2</b>	
	2 - 8 Data, 1 Parity, 1 Stop		
	3 - 8 Data, 1 Stop		
	5 - 7 Data, 1 Parity, 1 Stop		
	<b>parity</b> - determines how the parity bit is generated and checked, if present; setting this subparameter is mandatory and has a meaning only if <b>format</b> > subparameter is either 2 or 5 (for 13.00.xxx SW releases meaningless <b>format</b> > values are not allowed).		
	0 - Odd		
	1 - Even	a . 1 .	
AT+ICF?	Read command returns current settings for subparameters <		
	If current setting of subparameter <b><format></format></b> is neither 2 nor	5, the current setting of	
	subparameter <b><parity></parity></b> will always represented as 0.	<b>1 1</b>	
AT+ICF=?		Test command returns the ranges of values for the parameters <b><format></format></b> and	
D . f	<pre> <pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre></pre>

#### 3.5.3.3. Call Control

#### 3.5.3.3.1. Dial - D

	I-D
<mark>D – Dial</mark>	SELINT 0 / 1
ATD <number>[;]</number>	Execution command starts a call to the phone number given as parameter. If ";" is present, a VOICE call to the given number is performed, regardless of the current value of the connection mode set by +FCLASS command.
	Parameter: < <b>number</b> > - phone number to be dialed
	Note: type of call (data, fax or voice) depends on last +FCLASS setting.
	Note: the numbers accepted are 0-9 and *,#,"A", "B", "C", "D","+".
ATD> <str>[;]</str>	Note: for backwards compatibility with landline modems modifiers"T", "P", "R", ",", "W", "!", "@" are accepted but have no effect.Issues a call to phone number which corresponding alphanumeric field is <str>all available memories will be searched for the correct entry.</str>
	If ";" is present a <b>voice</b> call is performed.
	Parameter: <b>str&gt;</b> - alphanumeric field corresponding to phone number; it must be enclosed in quotation marks.
	Note: parameter <b><str></str></b> is case sensitive.
	Note: used character set should be the one selected with command Select TE character set +CSCS.
ATD> <mem><n>[;]</n></mem>	Issues a call to phone number in phonebook memory storage <b><mem></mem></b> , entry location <b><n></n></b> (available memories may be queried with <b>AT+CPBS=?</b> ). If ";" is present a <b>voice</b> call is performed.
	Parameters: <b>mem&gt;</b> - phonebook memory storage SM - SIM phonebook
	FD - SIM fixed dialling-phonebook LD - SIM last-dialling-phonebook MC - device missed (unanswered received) calls list
	<ul> <li>RC - ME received calls list</li> <li><n> - entry location; it should be in the range of locations available in the memory used.</n></li> </ul>
ATD> <n>[;]</n>	Issues a call to phone number in entry location $\langle n \rangle$ of the active phonebook

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

80000ST10025a Rev. 24 – 2016-09-07

<mark>D – Dial</mark>	SELINT 0/1
	memory storage (see +CPBS).
	If ";" is present a voice call is performed.
	Parameter:
	<n> - active phonebook memory storage entry location; it should be in the range</n>
	of locations available in the active phonebook memory storage.
ATDL	Issues a call to the last number dialed.
ATDS= <nr>[;]</nr>	Issues a call to the number stored in the MODULE internal phonebook position
	number <b><nr></nr></b> .
	If ";" is present a VOICE call is performed.
	Parameter:
	$\langle nr \rangle$ - internal phonebook position to be called (See either &N and &Z)
ATD <number>I[;]</number>	Issues a call overwriting the CLIR supplementary service subscription default
ATD <number>i[;]</number>	value for this call
	If ";" is present a VOICE call is performed.
	in , is present a vorell can is performed.
	I - invocation, restrict CLI presentation
	i - suppression, allow CLI presentation
ATD <number>G[;]</number>	Issues a call checking the CUG supplementary service information for the current
ATD <number>g[;]</number>	call. Refer to +CCUG command.
	If "," is present a VOICE call is performed.
ATD* <gprs_sc></gprs_sc>	This command is specific of GPRS functionality and causes the MT to perform
[* <addr>][*[<l2p>]</l2p></addr>	whatever actions are necessary to establish communication between the TE and
[*[ <cid>]]]#</cid>	the external PDN.
	Parameters:
	<pre><gprs_sc> - GPRS Service Code, a digit string (value 99) which identifies a request to use the GPRS</gprs_sc></pre>
	<addr> - string that identifies the called party in the address space applicable to</addr>
	the PDP.
	<l2p> - a string which indicates the layer 2 protocol to be used (see +CGDATA</l2p>
	command). For communications software that does not support
	arbitrary characters in the dial string, the following numeric
	equivalents shall be used:
	1 - PPP
	<cid> - a digit which specifies a particular PDP context definition (see</cid>
	+CGDCONT command).
Example	To dial a number in SIM phonebook entry 6:
<b>^</b>	ATD>SM6
	OK
	<i>To have a voice call to the 6-th entry of active phonebook:</i>
	ATD>6; OK
	To call the entry with alphanumeric field "Name":

<mark>D – Dial</mark>	SELINT 2
	memory storage (see +CPBS).
	If ";" is present a <b>voice</b> call is performed.
	Parameter:
	<n> - active phonebook memory storage entry location; it should be in the range</n>
	of locations available in the active phonebook memory storage.
ATDL	Issues a call to the last number dialed.Issues a call to the number stored in the MODULE internal phonebook position
ATDS= <nr>[;]</nr>	number < <b>nr</b> >.
	If ";" is present a voice call is performed.
	in , is present a voice can is performed.
	Parameter:
	$\langle nr \rangle$ - internal phonebook position to be called (See commands &N and &Z)
ATD <number>I[;]</number>	Issues a call overwriting the CLIR supplementary service subscription default
ATD <number>i[;]</number>	value for this call
	If ";" is present a <b>voice</b> call is performed.
	I - invocation, restrict CLI presentation
	i - suppression, allow CLI presentation
ATD <number>G[;]</number>	Issues a call checking the CUG supplementary service information for the current
ATD <number>g[;]</number>	call. Refer to +CCUG command.
ATD* <gprs_sc></gprs_sc>	If ";" is present a <b>voice</b> call is performed. This command is specific of GPRS functionality and causes the <b>MT</b> to perform
[* <addr>][*[<l2p>]</l2p></addr>	whatever actions are necessary to establish communication between the TE and
[*[ <cid>]]]#</cid>	the external PDN.
	Parameters:
	<pre><gprs_sc> - GPRS Service Code, a digit string (value 99) which identifies a</gprs_sc></pre>
	request to use the GPRS
	<b><addr></addr></b> - string that identifies the called party in the address space applicable to
	the PDP.
	<l2p> - a string which indicates the layer 2 protocol to be used (see +CGDATA</l2p>
	command). For communications software that does not support
	arbitrary characters in the dial string, the following numeric equivalents shall be used:
	1 - PPP
	<cid> - a digit which specifies a particular PDP context definition (see</cid>
	+CGDCONT command).
Example	To dial a number in SIM phonebook entry 6:
I	ATD>SM6
	ОК
	To have a voice call to the 6-th entry of active phonebook:
	ATD>6;
	OK V
	To call the entry with alphanumeric field "Name":

+MS - Modulation Sele	ection	<mark>SELINT 0 / 1 / 2</mark>
AT+MS?	Read command returns the current value of <carrier>, <automo< th=""><th>de&gt;, <min_rate>,</min_rate></th></automo<></carrier>	de>, <min_rate>,</min_rate>
	<max_rate> parameters.</max_rate>	
AT+MS=?	Test command returns all supported values of the <carrier>, <a< th=""><th>utomode&gt;,</th></a<></carrier>	utomode>,
	<min_rate>, <max_rate> parameters.</max_rate></min_rate>	

# 3.5.3.4.2. Line Quality And Auto Retrain - %E

%E - Line Quality Monitor And Auto Retrain Or Fallback/Fallforward SELINT 0 / 1 / 2		
AT%E <n></n>	Execution command has no effect and is included only for backward compatibility	
	with landline modems.	

## 3.5.3.5. Compression Control

## 3.5.3.5.1. Data Compression - +DS

+DS - Data Compr	ession SELINT 0 / 1 /	2
AT+DS=[ <n>]</n>	Set command sets the V42 compression parameter.	
	Parameter:	
	<n></n>	
	0 - no compression, it is currently the only supported value; the command ha effect, and is included only for backward compatibility	s no
AT+DS?	Read command returns current value of the data compression parameter.	
AT+DS=?	Test command returns all supported values of the parameter <b><n></n></b>	
Reference	V25ter	

#### 3.5.3.5.2. Data Compression Reporting - +DR

+DR - Data Compressi	on Reporting SELINT 0 / 1 / 2	
AT+DR= <n></n>	Set command enables/disables the data compression reporting upon connection.	
	Parameter:	
	<n></n>	
	0 - data compression reporting disabled;	
	1 - data compression reporting enabled upon connection.	
	Note: if enabled, the following intermediate result code is transmitted before the	
	final result code:	
	+DR: <compression></compression>	
	(the only supported value for <b><compression></compression></b> is "NONE")	
AT+DR?	Read command returns current value of < <b>n</b> >.	
AT+DR=?	Test command returns all supported values of the parameter <b><n></n></b>

+DR - Data Compressi	on Reporting	<b>SELINT 0 / 1 / 2</b>
Reference	V25ter	

#### 3.5.3.6. S Parameters

Basic commands that begin with the letter "S" are known as "S-Parameters". The number following the "S" indicates the "parameter number" being referenced. If the number is not recognized as a valid parameter number, an ERROR result code is issued.

If no value is given for the sub parameter of an **S-Parameter**, an **ERROR** result code will be issued and the stored value left unchanged.

Reference: V25ter

#### 3.5.3.6.1. Number Of Rings To Auto Answer - S0

<mark>80 - Number Of Rin</mark>	gs To Auto Answer SELINT 0 / 1
ATS0[= <n>]</n>	Set command sets the number of rings required before device automatically answers an incoming call.
	Parameter:
	< <b>n</b> > - number of rings
	0 - auto answer disabled (factory default)
	1255 - number of rings required before automatic answer.
ATS0?	Read command returns the current value of <b>S0</b> parameter.
ATS0=?	Test command returns the range for <b><n></n></b> without command echo and parenthesis.
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s
Note	Automatically answer is not enabled if current instance is in online mode
Reference	V25ter

<mark>80 - Number Of Rin</mark>	igs To Auto Answer	<mark>SELINT 2</mark>
ATS0=[ <n>]</n>	Set command sets the number of rings required before device automatically answers an incoming call.	
	Parameter:	
	< <b>n</b> > - number of rings	
	0 - auto answer disabled (factory default)	
	1255 - number of rings required before automatic answe	er.
ATS0?	Read command returns the current value of S0 parameter	ſ.
Reference	V25ter

## 3.5.3.6.2. Ring Counter - S1

<b>S1 - Ring Counter</b>	SELINT 0 / 1
ATS1	S1 is incremented each time the device detects the ring signal of an incoming call S1 is cleared as soon as no ring occur.
	Note: the form <b>ATS1</b> has no effect.
ATS1?	Read command returns the value of S1 ring counter.
ATS1=?	Test command returns the range of values for <b>S1</b> ring counter without command echo and parenthesis.
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s

<b>S1 - Ring Counter</b>	SELINT 2
ATS1	<b>S1</b> is incremented each time the device detects the ring signal of an incoming call. <b>S1</b> is cleared as soon as no ring occur.
	Note: the form ATS1 has no effect.
ATS1?	Read command returns the value of this parameter.

# 3.5.3.6.3. Escape Character - S2

S2 - Escape Charac	ter SELINT 0 / 1	
ATS2[= <char>]</char>	Set command sets the ASCII character to be used as escape character.	
	Parameter:	
	<char> - escape character decimal ASCII</char>	
	0255 - factory default value is 43 (+).	
	Note: the escape sequence consists of three escape characters preceded and	
	followed by $n$ ms of idle (see S12 to set $n$ ).	
ATS2?	Read command returns the current value of S2 parameter.	
ATS2=?	Test command returns the range for <b><char></char></b> without command echo and parenthesis	
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s	

S2 - Escape Charact	ter SELINT
ATS2=[ <char>]</char>	Set command sets the ASCII character to be used as escape character.
	Parameter:
	<char> - escape character decimal ASCII</char>
	0255 - factory default value is 43 (+).
	Note: the escape sequence consists of three escape characters preceded and
	followed by <i>n</i> ms of idle (see S12 to set <i>n</i> ).
ATS2?	Read command returns the current value of S2 parameter.

S2 - Escape Character		SELINT 2
Note: the format of the numbers in output is always 3 digits, left-filled with 0s		filled with 0s

#### 3.5.3.6.4. Command Line Termination Character - S3

<b>S3 - Command Line T</b>	ermination Character SELINT 0 / 1		
ATS3[= <char>]</char>	Set command sets the value of the character either recognized by the device as command line terminator and generated by the device as part of the header, trailer and terminator for result codes and information text, along with <b>S4</b> parameter.		
	Parameter:		
	<char> - command line termination character (decimal ASCII)</char>		
	0127 - factory default value is 13 (ASCII CR)		
	Note: the "previous" value of <b>S3</b> is used to determine the command line termination character for entering the command line containing the <b>S3</b> setting command. However the result code issued shall use the "new" value of <b>S3</b> (as set during the processing of the command line).		
ATS3?	Read command returns the current value of <b>S3</b> parameter.		
ATS3=?	Test command returns the range for <b><char></char></b> without command echo and parenthesis.		
Note	For either Read and Test command the format of the numbers in output is always 3 digits, left-filled with 0s		
Reference	V25ter		

S3 - Command Line	63 - Command Line Termination CharacterSELINT 2		
ATS3=[ <char>]</char>	Set command sets the value of the character either recognized by the device as command line terminator and generated by the device as part of the header, trailer, and terminator for result codes and information text, along with <b>S4 parameter</b> .		
	Parameter:		
	<char> - command line termination character (decimal ASCII)</char>		
	0127 - factory default value is 13 (ASCII <b><cr></cr></b> )		
	Note: the "previous" value of <b>S3</b> is used to determine the command line termination character for entering the command line containing the <b>S3</b> setting command. However the result code issued shall use the "new" value of <b>S3</b> (as set during the processing of the command line)		
ATS3?	Read command returns the current value of <b>S3 parameter</b> .		
	Note: the format of the numbers in output is always 3 digits, left-filled with 0s

**AT Commands Reference Guide** 80000ST10025a Rev. 24 – 2016-09-07

# **3.5.4. 3GPP TS 27.007 AT Commands**

#### 3.5.4.1. General

#### 3.5.4.1.1. Request Manufacturer Identification - +CGMI

+CGMI - Request Manufacturer Identification SELINT 0 / 1		
AT+CGMI	Execution command returns the device manufacturer identific command echo. The output depends on the choice made command.	
AT+CGMI?	Read command has the same behaviour as Execution command	
Reference	3GPP TS 27.007	

+CGMI - Request Manufacturer Identification SELINT 2		
AT+CGMI	Execution command returns the device manufacturer identification code without command echo. The output depends on the choice made through <b>#SELINT</b> command.	
AT+CGMI=?	Test command returns <b>OK</b> result code.	
Reference	3GPP TS 27.007	

#### 3.5.4.1.2. Request Model Identification - +CGMM

+CGMM - Request Mo	odel Identification SELINT 0 / 1
AT+CGMM	Execution command returns the device model identification code without command echo.
Reference	3GPP TS 27.007

+CGMM - Request Model Identification SELINT 2		
AT+CGMM	Execution command returns the device model identification code without	
	command echo.	
AT+CGMM=?	Test command returns <b>OK</b> result code.	
Reference	3GPP TS 27.007	

#### **3.5.4.1.3.** Request Revision Identification - +CGMR

+CGMR - Request Rev	vision Identification	<mark>SELINT 0 / 1</mark>
AT+CGMR	Execution command returns device software revision number without comman	
	echo.	
AT+CGMR?	Read command has the same behaviour as Execution command	
Reference	3GPP TS 27.007	

+CGMR - Request Revision Identification SELINT 2		
AT+CGMR	Execution command returns device software revision number without command	
	echo.	
AT+CGMR=?	Test command returns <b>OK</b> result code.

## 3.5.4.1.4. Request Product Serial Number Identification - +CGSN

+CGSN - Request Prod	uct Serial Number Identification	SELINT 0 / 1
AT+CGSN	Execution command returns the product serial number, identified as the IMEI of	
	the mobile, without command echo.	
AT+CGSN?	Read command has the same behaviour as Execution command	
Reference	3GPP TS 27.007	

+CGSN - Request Proc	luct Serial Number Identification	SELINT 2
AT+CGSN	Execution command returns the product serial number, identified	l as the IMEI of
	the mobile, without command echo.	
AT+CGSN=?	Test command returns <b>OK</b> result code.	
Reference	3GPP TS 27.007	

#### 3.5.4.1.5. Select TE Character Set - +CSCS

+CSCS - Select TE Ch	aracter Set SELINT 0 / 1	
AT+CSCS	Set command sets the current character set used by the device.	
[= <chset>]</chset>		
	Parameter:	
	<chset> - character set</chset>	
	"IRA" - ITU-T.50	
	"8859-1" - ISO 8859 Latin 1	
	"PCCP437" - PC character set Code Page 437.	
	"UCS2" - 16-bit universal multiple-octet coded character set (ISO/IEC10646)	
	Note: If parameter is omitted then the behaviour of Set command is the same as	
	Read command.	
AT+CSCS?	Read command returns the current value of the active character set.	
AT+CSCS=?	Test command returns the supported values of the parameter <b><chset></chset></b> .	
	For compatibility with previous versions, Test command returns	
	+CSCS: ("IRA")	
	An enhanced version of Test command has been defined: <b>AT+CSCS=??</b> , that provides the complete range of values for <b><chset></chset></b> .	
AT+CSCS=??	Enhanced test command returns the supported values of the parameter <b><chset></chset></b>	
Reference	3GPP TS 27.007	

+CSCS - Select TI	E Character Set	SELINT 2
AT+CSCS=	Set command sets the current character set used by the device.	
[ <chset>]</chset>		
	Parameter:

# **3.5.4.1.7.** Multiplexing Mode - +CMUX

+CMUX - Multiplexing Mode	SELINT 2
AT+CMUX=	Set command is used to enable/disable the 3GPP TS 27.010 multiplexing
<mode></mode>	protocol control channel.
[, <subset></subset>	
[, <port_speed></port_speed>	Parameters:
[, <n1></n1>	<mode> multiplexer transparency mechanism</mode>
111	0 - basic option; it is currently the only supported value.
	<subset></subset>
	0 - UIH frames used only; it is currently the only supported value.
	<pre><port_speed></port_speed></pre>
	2 – 19200 bps
	3 – 38400 bps
	4 – 57600 bps
	5 - 115200 bps
	<n1> max frame size, it indicates the maximum lenght of the information field of CMUX frame (point 5.7.2 of 3GPP TS</n1>
	07.10)
	1 to MaxFrameSize
	Note: after entering the <i>Multiplexed Mode</i> an inactive timer of five
	seconds starts. If no CMUX control channel is established before this
	inactivity timer expires the engine returns to AT Command Mode
	Note: CMUX cannot work with the automatic speed detection; the speed must be set with AT+IPR= <rate> (before sending AT+CMUX) or using the 3<sup>rd</sup> parameter <b><port_speed></port_speed></b>. If the <b><port_speed></port_speed></b> parameter has been used, the speed will be changed after the OK (response to AT+CMUX). At the end of the CMUX session the IPR preserve the value set with <b><port_speed></port_speed></b>. To be sure that the firmware supports this feature, check it with the test command. Note: all the CMUX protocol parameters are fixed as defined in GSM07.10 and cannot be changed. The parameter <b><n1></n1></b> is not supported by all products or software version; to be sure check it with the test command. If <b><n1></n1></b> is not supported or not used it will be set to the default value. Note: the default max frame size is: <b>N1=127</b>; using this configuration, the largest allowed CMUX frame (including start and end flag) is 133 bytes long. <b>Note: to set a N1 greater then 127, it is mandatory to configure the</b></rate>
AT+CMUX?	module using the command AT#CPUMODE=3         Read command returns all the current values of the parameters in the
	format:

AT+CNUM	
	If the ENS functionality has not been previously enabled (see <u>#ENS</u> )
	Execution command returns the MSISDN (if the phone number of the device has been stored in the SIM card) in the format:
	+CNUM: <alpha>,<number>,<type></type></number></alpha>
	If the ENS functionality has been previously enabled (see <u>#ENS</u> )
	Execution command returns the MSISDN (if the phone number of the device has been stored in the SIM card) in the format:
	+CNUM: <alpha>,<number>,<type>[<cr><lf> +CNUM: <alpha>,<number>,<type>[]]</type></number></alpha></lf></cr></type></number></alpha>
	where: <b><alpha></alpha></b> - alphanumeric string associated to <b><number></number></b> ; used character set should be the one selected with <b>+CSCS</b> .
	<number> - string containing the phone number in the format <type> <type> - type of number: 129 - national numbering scheme</type></type></number>
	145 - international numbering scheme (contains the character "+").
	Note: in 13.00.xxx SW release the behaviour doesn't depend on ENS functionality and corresponds to the case when the ENS functionality is enabled.
AT+CNUM=?	Test command returns the <b>OK</b> result code

#### 3.5.4.3.2. Read Operator Names - +COPN

+COPN - Read Operator Names SELINT		SELINT 0/1
AT+COPN	Execution command returns the list of operator names from	n the ME in the format:
	+COPN: <numeric1>,<alpha1>[<cr><lf><cr><lf></lf></cr></lf></cr></alpha1></numeric1>	>
	+COPN: <numeric2>,<alpha2>[]]</alpha2></numeric2>	
	where:	
	<numericn> - string type, operator in numeric format (see</numericn>	+COPS)
	<alphan> - string type, operator in long alphanumeric form</alphan>	nat (see +COPS)
	Note: each operator code <b><numeric< b=""> hat has an alphanus</numeric<></b>	meric equivalent
	<alphan> in the ME memory is returned</alphan>	
Reference	3GPP TS 27.007	

+COPN - Read Op	erator Names	SELINT 2
AT+COPN	Execution command returns the list of operator names from	the <b>ME</b> in the format:
	+COPN: <numeric1>,<alpha1>[<cr><lf></lf></cr></alpha1></numeric1>	
	+COPN: <numeric2>,<alpha2>[]]</alpha2></numeric2>	
	where: < <b>numeric</b> <i>n</i> > - string type, operator in numeric format (see + < <b>alpha</b> <i>n</i> > - string type, operator in long alphanumeric format	
	Note: each operator code <b><numeric< b=""><i>n</i><b>&gt;</b> that has an alphanum <b><alphan></alphan></b> in the ME memory is returned</numeric<></b>	eric equivalent
AT+COPN=?	Test command returns the <b>OK</b> result code	
Reference	3GPP TS 27.007	

## 3.5.4.3.3. Network Registration Report - +CREG

+CREG - Network	+CREG - Network Registration Report SELINT 0 / 1		
AT+CREG[=	Set command enables/disables network registration reports depending on the		
[ <mode>]]</mode>	parameter <b><mode></mode></b> .		
	Parameter: <b>mode&gt;</b> 0 - disable network registration unsolicited result code (factory default) 1 - enable network registration unsolicited result code 2 - enable network registration unsolicited result code with network Cell identification data		
	If <b><mode>=1</mode></b> , network registration result code reports:		

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 102 of 717

80000ST10025a Rev. 24 – 2016-09-07

+CREG - Network	Registration Report SELINT 0 / 1
	+CREG: <stat></stat>
	<pre>where <stat> 0 - not registered, ME is not currently searching a new operator to register to 1 - registered, home network 2 - not registered, but ME is currently searching a new operator to register to 3 - registration denied 4 -unknown 5 - registered, roaming</stat></pre>
	If <b><mode>=2</mode></b> , network registration result code reports:
	+CREG: <stat>[,<lac>,<ci>]</ci></lac></stat>
	where: <b>Lac&gt;</b> - Local Area Code for the currently registered on cell <b>Ci&gt;</b> - Cell Id for the currently registered on cell
	Note: <b><lac></lac></b> and <b><ci></ci></b> are reported only if <b><mode>=2</mode></b> and the mobile is registered on some network cell.
	Note: issuing <b>AT+CREG<cr></cr></b> is the same as issuing the Read command.
	Note: issuing <b>AT+CREG=<cr></cr></b> is the same as issuing the command <b>AT+CREG=0<cr></cr></b> .
AT+CREG?	Read command reports the <b><mode></mode></b> and <b><stat></stat></b> parameter values in the format:
	+CREG: <mode>,<stat>[,<lac>,<ci>]</ci></lac></stat></mode>
	Note: <b><lac></lac></b> and <b><ci></ci></b> are reported only if <b><mode>=2</mode></b> and the mobile is registered on some network cell.
AT+CREG=?	Test command returns the range of supported <b><mode></mode></b>
Example	AT OK at+creg? +CREG: 0,2
	OK (the MODULE is in network searching state) at+creg? +CREG: 0,2
	OK at+creg? +CREG: 0,2
	OK at+creg? +CREG: 0,2

80000ST10025a Rev. 24 - 2016-09-07

CREG - Network Registration Report SELINT 2	
AT+CREG?	Read command reports the <b><mode></mode></b> and <b><stat></stat></b> parameter values in the format:
	+CREG: <mode>,<stat>[,<lac>,<ci>]</ci></lac></stat></mode>
	Note: <b><lac></lac></b> and <b><ci></ci></b> are reported only if <b><mode>=2</mode></b> and the mobile is registered on some network cell.
AT+CREG=?	Test command returns the range of supported <b><mode></mode></b>
Example	AT OK at+creg? +CREG: 0,2
	OK (the MODULE is in network searching state) at+creg? +CREG: 0,2
	OK at+creg? +CREG: 0,2
	OK at+creg? +CREG: 0,2 OK at+creg? +CREG: 0,1
	OK (the MODULE is registered) at+creg? +CREG: 0,1
	OK
Reference	3GPP TS 27.007
Note	There are situations in which the presentation of the URC controlled by +CREG is slightly different from ETSI specifications: e.g. it is possible to have an excessive presentation of the URC +CREG: 4. We identified this behaviour and decided to maintain it as default for backward compatibility issues. It is indeed possible to avoid it simply issuing AT#REGMODE=1 (see #REGMODE): this puts the Operation Mode of Registration Status Commands in 'Enhanced Registration Operation Mode' which is more formal.

# 3.5.4.3.4. Operator Selection - +COPS

+COPS - Operator Selection SELINT 0 / 1		
AT+COPS[=	Set command forces an attempt to select and register the GSM network operator.	
[ <mode></mode>	<b><mode></mode></b> parameter defines whether the operator selection is done automatically or	
[, <format></format>	it is forced by this command to operator <b><oper></oper></b> .	
[, <oper>]]]]</oper>	The operator <b><oper></oper></b> shall be given in format <b><format></format></b> .	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 105 of 717

80000ST10025a Rev. 24 - 2016-09-07

OPS - Operator S	election SELINT 0 / 1
	The behaviour of +COPS command depends on the last #COPSMODE setting.
	(#COPSMODE=0)
	Parameters:
	<mode></mode>
	<ul> <li>0 - automatic choice (the parameter <oper> will be ignored) (factory default)</oper></li> <li>1 - manual choice unlocked (network is kept as long as available, then it can be changed with some other suited networks to guarantee the service)</li> <li>2 - deregister from GSM network; the MODULE is kept unregistered until a +COPS with <mode>=0, 1, 4 or 5 is issued</mode></li> <li>3 - set only <format> parameter (the parameter <oper> will be ignored)</oper></format></li> <li>4 - manual/automatic (<oper> field shall be present); if manual selection fails, automatic mode (</oper></li> </ul>
	automatic mode ( <mode>=0) is entered</mode>
	5 - manual choice locked (network is kept fixed, if the chosen network is not available, then the mobile has no service)
	<format></format>
	0 - alphanumeric long form (max length 16 digits)
	1 - alphanumeric short form
	2 - Numeric 5 or 6 digits [country code (3) + network code (2 or 3)]
	<pre><oper>: network operator in format defined by <format> parameter.</format></oper></pre>
	(#COPSMODE=1)
	Parameters:
	<mode></mode>
	<ul> <li>0 - automatic choice (the parameter <oper> will be ignored) (default)</oper></li> <li>1 - manual choice (<oper> field shall be present)</oper></li> </ul>
	2 - deregister from GSM network; the MODULE is kept unregistered until a +COPS with <mode>=0, 1 or 4 is issued</mode>
	<ul> <li>3 - set only <format> parameter (the parameter <oper> will be ignored)</oper></format></li> <li>4 - manual/automatic (<oper> field shall be present); if manual selection fails, automatic mode (<mode>=0) is entered</mode></oper></li> </ul>
	<format></format>
	0 - alphanumeric long form (max length 16 digits)
	2 - Numeric 5 or 6 digits [country code (3) + network code (2 or 3)]
	<oper>: network operator in format defined by <format> parameter.</format></oper>
	Note: <b><mode></mode></b> parameter setting is stored in NVM and available at next reboot, if it is not <b>3</b> (i.e.: set only <b><format></format></b> parameter).

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

80000ST10025a Rev. 24 - 2016-09-07

+COPS - Operator Selection SELINT 0 / 1	
	Note: if <b><mode>=1</mode></b> or 4 (or 5 if <b>#COPSMODE=0</b> ), the selected network is stored in NVM too and is available at next reboot (this will happen even with a new SIM inserted)
	Note: <b><format></format></b> parameter setting is never stored in NVM
	Note: issuing <b>AT+COPS<cr></cr></b> is the same as issuing the Read command.
	Note: issuing <b>AT+COPS=<cr></cr></b> is the same as issuing the command <b>AT+COPS=0<cr></cr></b> .
AT+COPS?	Read command returns current value of <b><mode></mode></b> , <b><format></format></b> and <b><oper></oper></b> in format <b><format></format></b> ; if no operator is selected, <b><format></format></b> and <b><oper></oper></b> are omitted
	+COPS: <mode>[, <format>, <oper>]</oper></format></mode>
AT+COPS=?	Test command returns a list of quadruplets, each representing an operator present in the network.
	The behaviour of Test command depends on the last <b>#COPSMODE</b> setting.
	(#COPSMODE=0)
	The command outputs as many rows as the number of quadruplets, each of them in the format:
	+COPS: ( <stat> ,<oper (in="" <format="">=0)&gt;,"", <oper (in="" <format="">=2)&gt;)</oper></oper></stat>
	where <stat> - operator availability</stat>
	0 - unknown
	1 - available 2 - current
	3 - forbidden
	(#COPSMODE=1)
	The quadruplets in the list are separated by commas:
	+COPS: [list of supported ( <stat> ,<oper (in="" <format="">=0)&gt;,, <oper (in="" <format="">=2)&gt; )s][,,(list of supported <mode>s),</mode></oper></oper></stat>
	(list of supported <format>s)]</format>
	where
	< <b>stat&gt;</b> - operator availability
	0 - unknown
	1 - available 2 - current

# 3.5.4.4.2. Set Phone Functionality - +CFUN

+CFUN - Set Phone	Functionality	SELINT 0 / 1
AT+CFUN= <fun></fun>	Set command selects the level of functionality in the ME.	
	Parameter:	
	<fun> - is the power saving function mode</fun>	
	0 - minimum functionality, NON-CYCLIC SLEEP mode: in th	
	interface is not accessible. Consequently, once you have set	-
	not send further characters. Otherwise these characters remain	*
	buffer and may delay the output of an unsolicited result code	
	event, or rising <b>RTS</b> line, stops power saving and takes the M	AE back to full
	functionality level <b><fun>=1</fun></b> .	
	1 - mobile full functionality with power saving disabled (factor	y default)
	2 - disable TX	
	4 - disable either TX and RX	
	5 - mobile full functionality with power saving enabled	
	Note: issuing AT+CFUN=4 actually causes the module to perfo	rm either a network
	deregistration and a SIM deactivation.

	An enhanced version of Test command has been defined: <b>AT+C</b> provides the complete range of values for <b><fun></fun></b> .	<b>CFUN=??</b> , that
AT+CFUN=??	Enhanced test command returns the list of supported values for ·	<fun></fun>
Reference	3GPP TS 27.007	

+CFUN - Set Phone Functionali	ty SELINT 2
AT+CFUN=	Set command selects the level of functionality in the ME.
[ <fun>[,<rst>]]</rst></fun>	
	Parameters:
	<fun> - is the power saving function mode</fun>
	0 - minimum functionality, NON-CYCLIC SLEEP mode: in this mode,
	the AT interface is not accessible. Consequently, once you have set <b><fun></fun></b>
	level 0, do not send further characters. Otherwise these characters remain
	in the input buffer and may delay the output of an unsolicited result code.
	The first wake-up event, or toggling <b>RTS</b> line, stops power saving and
	takes the ME back to full functionality level <b><fun>=1</fun></b> .
	1 - mobile full functionality with power saving disabled (factory default)
	2 - disable TX
	4 - disable both TX and RX
	5 - mobile full functionality with power saving enabled
	7 - CYCLIC SLEEP mode: in this mode, the serial interface is
	periodically enabled while CTS is active. If characters are recognized on

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 136 of 717

80000ST10025a Rev. 24 - 2016-09-07

the serial interface, the ME stays active for 2 seconds after the last character was sent or received. ME exits SLEEP mode only, if AT+CFUN=1 is entered 9 – just as 0 but with different wake-up events (see SW User Guide)
The following two values are supported only for 10.01.xxx, 16.01.xxx and 13.00.xxx SW versions, starting respectively from 10.01.xx1, 16.01.xx1 and 13.00.xx7. 10 – disable both TX and RX with power saving enabled 11- disable both TX and RX and automatically the module goes in power saving. The AT interface is not accessible. Consequently, once you have set <b><fun></fun></b> level 11, it do not send further characters. Toggling <b>RTS</b> line, stops power saving and takes the ME back awake. In order to restore full functionality, the user must send +CFUN command with <b><fun>=1</fun></b> <b>The module sleeps about 20 seconds, verifies the RTS state and then it returns to sleep.</b>
<pre><rst> - reset flag 0 - do not reset the ME before setting it to <fun> functionality level 1 - reset the device. The device is fully functional after the reset. This value is available only for <fun> = 1. The parameter <rst> is not supported by all products or software versions; to be sure check it with the test command.</rst></fun></fun></rst></pre>
Note: issuing <b>AT+CFUN=4[,0]</b> (or 10[,0], 11[,0]) actually causes the module to perform either a network deregistration and a SIM deactivation.
Note: if power saving enabled, it reduces the power consumption during the idle time, thus allowing a longer standby time with a given battery capacity.
Note: to place the module in power saving mode, set the <b><fun></fun></b> parameter at value = 5 or = 10 and the line <b>DTR</b> (RS232) must be set to <b>OFF</b> . Once in power saving, the <b>CTS</b> line switch to the <b>OFF</b> status to signal that the module is really in power saving condition. During the power saving condition, before sending any <b>AT</b> command on the serial line, the <b>DTR</b> must be set to <b>ON</b> (0V) to exit from power saving and it must be waited for the <b>CTS</b> (RS232) line to go in <b>ON</b> status. Until the <b>DTR</b> line is <b>ON</b> , the module will not return back in the power saving condition.
Note: the power saving function does not affect the network behaviour of the MODULE, even during the power save condition the module remains registered on the network and reachable for incoming calls or SMS. If a call incomes during the power save, then the module will wake up and proceed normally with the unsolicited incoming call code

## 3.5.4.4.12. Alarm Management - +CALA

+CALA - Alarm Mana	gement SELINT 0 / 1
AT+CALA[=	Set command stores in the internal Real Time Clock an alarm time with respective
<time>[,<n>[,<type></type></n></time>	settings. It is possible to set up a recurrent alarm for one or more days in the week.
[, <text>[,<recurr></recurr></text>	Currently just one alarm can be set.
[, <silent>]]]]]</silent>	
	When the RTC time reaches the alarm time then the alarm starts, the behaviour of
	the MODULE depends upon the setting <b><type></type></b> and if the device was already <b>ON</b>
	at the moment when the alarm time had come.
	Parameters:
	<pre><time> - current alarm time as quoted string</time></pre>
	<ul> <li>"" - (empty string) deletes the current alarm and resets all the +CALA parameters to the "factory default" configuration</li> </ul>
	"hh:mm:ss±zz" - format to be used only when issuing +CALA with parameter <recurr> too.</recurr>
	"yy/MM/dd,hh:mm:ss±zz" - generic format: it's the same as defined for +CCLK (see)
	< <b>n</b> > - index of the alarm
	0 - The only value supported is 0.
	<type> - alarm behaviour type</type>
	0 - reserved for other equipment use.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 156 of 717

80000ST10025a Rev. 24 - 2016-09-07

ALA - Alarn	n Management SELINT 0 / 1
	1 - the MODULE simply wakes up fully operative as if the <b>ON/OFF</b> button had
	been pressed. If the device is already <b>ON</b> at the alarm time, then it does nothing
	(default).
	2 - the MODULE wakes up in "alarm mode" if at the alarm time it was off,
	otherwise it remains fully operative. In both cases the MODULE issues an
	unsolicited code every 3s:
	+CALA: <text></text>
	where <b><text></text></b> is the <b>+CALA</b> optional parameter previously set.
	The device keeps on sending the unsolicited code every 3s until a <b>#WAKE</b> or
	<b>#SHDN</b> command is received or a 90 seconds timer expires. If the device is in
	"alarm mode" and it does not receive the <b>#WAKE</b> command within 90 seconds
	then it shuts down.
	3 - the MODULE wakes up in "alarm mode" if at the alarm time it was off,
	otherwise it remains fully operative. In both cases the MODULE starts playing
	the alarm tone on the selected path for the ringer (see <b>#SRP</b> )
	The device keeps on playing the alarm tone until a <b>#WAKE</b> or <b>#SHDN</b>
	command is received or a 90 seconds timer expires. If the device is in "alarm
	mode" and it does not receive the <b>#WAKE</b> command within 90s then it shuts
	down.
	4 - the MODULE wakes up in "alarm mode" if at the alarm time it was off,
	otherwise it remains fully operative. In both cases the MODULE brings the pin
	GPIO6 high, provided its <direction> has been set to alarm output, and keeps</direction>
	it in this state until a <b>#WAKE</b> or <b>#SHDN</b> command is received or a 90 seconds
	timer expires. If the device is in "alarm mode" and it does not receive the
	<b>#WAKE</b> command within 90s then it shuts down.
	5 - the MODULE will make both the actions as for <b><type>=2</type></b> and <b><type>=3</type></b> .
	6 - the MODULE will make both the actions as for <b><type>=2</type></b> and <b><type>=4</type></b> .
	7 - the MODULE will make both the actions as for <b><type>=3</type></b> and <b><type>=4</type></b> .
	<text> - unsolicited alarm code text string. It has meaning only if <type> is equal to 2 or 5 or 6.</type></text>
	<recurr> - string type value indicating day of week for the alarm in one of the</recurr>
	following formats:
	"<17>[,<17>[,]]" - it sets a recurrent alarm for one or more days in the
	week; the digits 1 to 7 corresponds to the days in the week (Monday is 1).
	"0" - it sets a recurrent alarm for all days in the week.
	<silent> - integer type indicating if the alarm is silent or not.</silent>
	0 - the alarm will not be silent;
	1 - the alarm will be silent.
	During the "alarm mode" the device will not make any network scan and will not
	register to any network and therefore is not able to dial or receive any call or SMS,
	the only commands that can be issued to the MODULE in this state are the
	<b>#WAKE</b> and <b>#SHDN</b> , every other command must not be issued during this state.
	TWARE and #SHD1, every other command must not be issued during this state.

## AT Commands Reference Guide

80000ST10025a Rev. 24 - 2016-09-07

AT+CAPD=?	Test command reports the supported range of values for parameter <b><sec></sec></b>

#### 3.5.4.4.14. Setting date format - +CSDF

+CSDF – setting date format	SELINT 2
AT+CSDF=[ <mode> [,<auxmode>]]</auxmode></mode>	This command sets the date format of the date information presented to the user, which is specified by use of the <b><mode></mode></b> parameter. The <b><mode></mode></b> affects the date format on the phone display and doesn't affect the date format of the AT command serial interface, so it not used. The command also sets the date format of the TE-TA interface, which is specified by use of the <b><auxmode></auxmode></b> parameter (i.e., the <b><auxmode></auxmode></b> affects the <b><time></time></b> of AT+CCLK and AT+CALA). If the parameters are omitted then this sets the default value of <b><mode></mode></b> . Parameters: <b><mode>:</mode></b> 1 DD-MMM-YYYY (default) 2 DD-MM-YY 3 MM/DD/YY 4 DD/MM/YY 5 DD.MM.YY 6 YYMMDD 7 YY-MM-DD <b><auxmode>:</auxmode></b> 1 yy/MM/dd (default) 2 yyyy/MM/dd Note: The <b><time></time></b> format of +CCLK and +CALA is "yy/MM/dd,hh:mm:ss+zz" when <b><auxmode>=1</auxmode></b> and it is "yyyMM/dd,hh:mm:ss+zz" when <b><auxmode>=2</auxmode></b> .
AT+CSDF?	Read command reports the currently selected <b><mode></mode></b> and <b><auxmode></auxmode></b> in the format: +CSDF: <b><mode></mode></b> , <b><auxmode></auxmode></b>
AT+CSDF=?	Test command reports the supported range of values for parameters <mode> and <auxmode></auxmode></mode>

### **3.5.4.4.15.** Setting time format - +CSTF

+CSTF – setting time format

SELINT 2

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

80000ST10025a Rev. 24 - 2016-09-07

AT+CSTF=[ <mode>]</mode>	This command sets the time format of the time information presented to the user, which is specified by use of the <b><mode></mode></b> parameter. The <b><mode></mode></b> affects the time format on the phone display and doesn't affect the time format of the AT command serial interface, so it not actually not used. Parameters: <b><mode>:</mode></b> 1 HH:MM (24 hour clock; default) 2 HH:MM a.m./p.m.
AT+CSTF?	Read command reports the currently selected <mode> in the format: +CSTF: <mode></mode></mode>
AT+CSTF=?	Test command reports the supported range of values for parameter <mode></mode>

## 3.5.4.4.16. Time Zone reporting - +CTZR

+CTZR – Time Zone reporting	SELINT 2
AT+CTZR= <onoff></onoff>	This command enables and disables the time zone change event reporting. If the reporting is enabled the MT returns the unsolicited result code +CTZV: <tz> whenever the time zone is changed. Parameters: <onoff>: 0 Disable time zone change event reporting (default) 1 Enable time zone change event reporting</onoff></tz>
AT+CTZR?	Read command reports the currently selected <b><onoff></onoff></b> in the format: +CTZR: <b><onoff></onoff></b>
AT+CTZR=?	Test command reports the supported range of values for parameter <onoff></onoff>

#### **3.5.4.4.17.** Automatic Time Zone update - +CTZU

+CTZU – automatic Time Zon	e update SELINT 2
AT+CTZU= <onoff></onoff>	This command enables and disables automatic time zone update via NITZ.
	Parameters:
	<onoff>:</onoff>
	0 Disable automatic time zone update via NITZ (default)
	1 Enable automatic time zone update via NITZ

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 162 of 717

80000ST10025a Rev. 24 - 2016-09-07

AT+CTZU?	Note: despite of the name, the command AT+CTZU=1 enables automatic update of the date and time set by AT+CCLK command (not only time zone). This happens when a Network Identity and Time Zone (NITZ) message is sent by the network. This command is the ETSI standard equivalent of Telit custom command AT#NITZ=1. If command AT+CTZU=1, or AT#NITZ=1 (or both) has been issued, NITZ message will cause a date and time update. Read command reports the currently selected <b><onoff></onoff></b> in the format: + <b>CTZU: <onoff></onoff></b>
AT+CTZU=?	Test command reports the supported range of values for parameter <b><onoff></onoff></b>

#### 3.5.4.4.18. Restricted SIM Access - +CRSM

+CRSM - Restricted	SIM Access SELINT 0 / 1 / 2
AT+CRSM=	Execution command transmits to the <b>ME</b> the SIM <b><command/></b> and its required
<command/>	parameters. ME handles internally all SIM-ME interface locking and file selection
[, <fileid></fileid>	routines. As response to the command, ME sends the actual SIM information
[, <p1>,<p2>,<p3></p3></p2></p1>	parameters and response data.
[, <data>]]]</data>	Demonsterne
	Parameters:
	<command/> - command passed on by the ME to the SIM
	176 - READ BINARY
	178 - READ RECORD
	192 - GET RESPONSE
	214 - UPDATE BINARY
	220 - UPDATE RECORD
	242 - STATUS
	<fileid> - identifier of an elementary data file on SIM. Mandatory for every command except STATUS.</fileid>
	<p1>,<p2>,<p3> - parameter passed on by the ME to the SIM; they are mandatory for every command except GET RESPONSE and STATUS 0255</p3></p2></p1>
	<data> - information to be read/written to the SIM (hexadecimal character format).</data>
	The response of the command is in the format:
	+CRSM: <sw1>,<sw2>[,<response>]</response></sw2></sw1>
	where: <b><sw1>,<sw2></sw2></sw1></b> - information from the SIM about the execution of the actual command either on successful or on failed execution.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 163 of 717

80000ST10025a Rev. 24 - 2016-09-07

+CRSM - Restricte	d SIM Access SELINT 0 / 1 / 2
	<pre><response> - on a successful completion of the command previously issued it gives</response></pre>
	Note: this command requires PIN authentication. However commands READ BINARY and READ RECORD can be issued before PIN authentication and if the SIM is blocked (after three failed PIN authentication attempts) to access the contents of the Elementary Files.
	Note: use only decimal numbers for parameters <b><command/></b> , <b><fileid></fileid></b> , <b><p1></p1></b> , <b><p2></p2></b> and <b><p3></p3></b> .
AT+CRSM=?	Test command returns the <b>OK</b> result code
Reference	3GPP TS 27.007, GSM 11.11

### 3.5.4.4.19. Alert Sound Mode - +CALM

+CALM - Alert Sound	Mode	<mark>SELINT 0 / 1</mark>
AT+CALM[=	Set command is used to select the general alert sound mode of the	ne device.
<mode>]</mode>		
	Parameter:	
	<mode></mode>	
	0 - normal mode	
	<ul><li>1 - silent mode; no sound will be generated by the device, exce</li><li>2 - stealth mode; no sound will be generated by the device</li></ul>	pt for alarm sound
	Note: if silent mode is selected then incoming calls will not produce but only the unsolicited messages <b>RING</b> or <b>+CRING</b> .	duce alerting sounds
	Note: If parameter is omitted then the behaviour of Set comm Read command.	hand is the same as
AT+CALM?	Read command returns the current value of parameter <b><mode></mode></b> .

80000ST10025a Rev. 24 - 2016-09-07

+CSVM – Set Voice Mail Number	SELINT 2
AT+CSVM= <mode>[,<number>[,<type &gt;]]</type </number></mode>	The number to the voice mail server is set with this command. The parameters <b><number></number></b> and <b><type></type></b> can be left out if the parameter <b><mode></mode></b> is set to 0.
	Parameters: <b>mode&gt;</b> 0 – disable the voice mail number 1 – enable the voice mail number (factory default) <b>number&gt;</b> - string type phone number of format specified by
	<type> <type> - type of address octet in integer format 129 - unknown type of number and ISDN/Telephony numbering plan 145 - international type of number and ISDN/Telephony numbering plan (contains the character "+")</type></type>
	Note: Set command only checks for parameters values validity; it does not any actual write to SIM to update voice mail number.
AT+CSVM?	Read command returns the currently selected voice mail number and the status (i.e. enabled/disabled) in the format +CSVM: <mode>,<number>,<type></type></number></mode>
AT+CSVM=?	Test command reports the range for the parameters <b><mode></mode></b> and <b><type></type></b> .

## 3.5.4.4.33. Open Logical Channel - +CCHO

+CCHO - Open Logical Ch	annel SELINT 2
AT+CCHO= <dfname></dfname>	Execution of the command causes the MT to return <b><sessionid></sessionid></b> to allow the TE to identify a channel that is being allocated by the currently selected UICC, which is attached to ME. The currently selected UICC will open a new logical channel; select the application identified by the <b><dfname></dfname></b> received with this command and return a session Id as the response. The ME shall restrict the communication between the TE and the UICC to this logical channel. This <b><sessionid></sessionid></b> is to be used when sending commands with Restricted UICC Logical Channel access +CRLA or Generic UICC Logical Channel access +CGLA commands.
	Parameter: <b><dfname></dfname></b> : all selectable applications in the UICC are referenced by a DF name coded on 1 to 16 bytes

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 177 of 717

#### AT Commands Reference Guide 80000ST10025a Rev. 24 – 2016-09-07

	The response of the command is in the format: +CCHO: < sessionid >
	where: < <b>sessionid</b> > integer type; a session Id to be used in order to target a specific application on the smart card (e.g. (U)SIM, WIM, ISIM) using logical channels mechanism
	See 3GPP TS 31.101 for more information about defined values.
	Error case: + <i>CME ERROR: <err></err></i> possible <err> values (numeric format followed by verbose format): 3 operation not allowed (<i>operation mode is not allowed by the ME</i>) 4 operation not supported (<i>wrong format or parameters of the command</i>) 13 SIM failure (<i>SIM response SW1 SW2 status byte Error</i>) 15 SIM wrong (<i>SIM response SW1 SW2 status byte Error</i>) 100 unknown (<i>generic error</i>)</err>
	Note: The logical channel number is contained in the CLASS byte of an APDU command, thus implicitly contained in all APDU commands sent to a UICC. In this case it will be up to the MT to manage the logical channel part of the APDU CLASS byte and to ensure that the chosen logical channel is relevant to the <sessionid> indicated in the AT command. See 3GPP TS 31.101 for further information on logical channels in APDU commands protocol.</sessionid>
AT+CCHO=?	Test command returns the <b>OK</b> result code.

## 3.5.4.4.34. Close Logical Channel - +CCHC

+CCHC – Close Logical Cha	nnel SELINT 2
AT+CCHC= <sessionid></sessionid>	This command asks the ME to close a communication session with the active UICC. The ME shall close the previously opened logical channel. The TE will no longer be able to send commands on this logical channel. The UICC will close the logical channel when receiving this command. Parameter: <sessionid> : integer type; a session Id to be used in order to target a specific application on the smart card (e.g. (U)SIM, WIM, ISIM) using logical channels mechanism.</sessionid>
	<ul> <li>Error case:</li> <li>+<i>CME ERROR: <err></err></i></li> <li>possible <err> values (numeric format followed by verbose format):</err></li> <li>3 operation not allowed (<i>operation mode is not allowed by the ME</i>)</li> <li>4 operation not supported (<i>wrong format or parameters of the command</i>)</li> </ul>

+CMEE - Report M	Iobile Equipment Error SELINT 2
AT+CMEE=[ <n>]</n>	Set command enables/disables the report of result code:
	+CME ERROR: <err></err>
	as an indication of an error relating to the +Cxxx commands issued.
	When enabled, device related errors cause the +CME ERROR: <err> final result code instead of the default ERROR final result code. ERROR is anyway returned normally when the error message is related to syntax, invalid parameters, or DTE functionality.</err>
	Parameter: <n> - enable flag 0 - disable +CME ERROR:<err> reports, use only ERROR report. 1 - enable +CME ERROR:<err> reports, with <err> in numeric format 2 - enable +CME ERROR: <err> reports, with <err> in verbose format</err></err></err></err></err></n>
AT+CMEE?	Read command returns the current value of subparameter <n>: +CMEE: <n></n></n>
AT+CMEE=?	Test command returns the range of values for subparameter <b><n></n></b>
Note	+CMEE has no effect on the final result code +CMS
Reference	3GPP TS 27.007

## 3.5.4.5.2. Set CMEE mode - #CMEEMODE

<b>#CMEEMODE –</b> Set CMEE m	ode SELINT 2
AT#CMEEMODE= <mode></mode>	This command allows to extend the set of error codes reported by CMEE to the GPRS related error codes.
	Parameters: <b><mode>:</mode></b> 0 – disable support of GPRS related error codes by AT+CMEE ( default )
	<ul><li>1 – enable support of GPRS related error codes by AT+CMEE</li><li>This parameter is stored in the user profile</li></ul>
AT#CMEEMODE?	Read command reports the currently selected < <b>mode</b> > in the format: #CMEEMODE: <mode></mode>
AT#CMEEMODE =?	Test command reports the supported range of values for parameter < mode >

AT Commands Reference Guide 80000ST10025a Rev. 24 – 2016-09-07

#### 3.5.4.6. Voice Control

#### **3.5.4.6.1. DTMF** Tones Transmission - +VTS

+VTS - DTMF Ton	es Transmission	LINT 0 / 1
AT+VTS=	Execution command allows the transmission of DTMF tones.	
<pre><dtmfstring></dtmfstring></pre>	Execution command anows the transmission of D Twit tones.	
[,duration]	Parameters:	
[,.uuration]	<ul> <li><dtmfstring> - string of <dtmf>s, i.e. ASCII characters in the set (0 it allows the user to send a sequence of DTMF tones, each of th duration that was defined through +VTD command.</dtmf></dtmfstring></li> <li><duration> - duration of a tone in 1/100 sec.; this parameter can be if the length of first parameter is just one ASCII character</duration></li> <li>0 - a single DTMF tone will be transmitted for a duration depending network, no matter what the current +VTD setting is.</li> <li>1255 - a single DTMF tone will be transmitted for a time <duration +vtd="" current="" is.<="" li="" matter="" multiples),="" no="" setting="" the="" what=""> <li>Note: this commands operates in voice mode only (see +FCLASS).</li> <li>Note: the character P does not correspond to any DTMF tone, but it if</li> </duration></li></ul>	hem with a specified only g on the on> (in 10 ms is interpreted as
	a pause of 3 seconds between the preceding and succeeding DTMF s	string elements
AT+VTS=?	For compatibility with previous versions, Test command returns +VTS: (),(),() An enhanced version of Test command has been defined: AT+VTS=	=?? that
	provides the correct range of values for <b><dtmf></dtmf></b> .	
AT+VTS=??	Test command provides the list of supported <b><dtmf>s</dtmf></b> and the list of <b><duration>s</duration></b> in the format:	supported
	(list of supported <dtmf>s)[,(list of supported <duration>s)]</duration></dtmf>	
Reference	3GPP TS 27.007 and TIA IS-101	

<mark>+VTS - DTMF To</mark>	nes Transmission SELINT 2	
AT+VTS=	Execution command allows the transmission of DTMF tones.	
<dtmfstring></dtmfstring>		
[,duration]	Parameters:	
	<pre><dtmfstring> - string of <dtmf>s, i.e. ASCII characters in the set (0-9),</dtmf></dtmfstring></pre>	
	#,*,(A-D),P; it allows the user to send a sequence of DTMF tones, each of	
	them with a duration that was defined through +VTD command.	
	<b>duration&gt;</b> - duration of a tone in 1/100 sec.; this parameter can be specified or	ıly
	if the length of first parameter is just one ASCII character	
	0 - a single DTMF tone will be transmitted for a duration depending on the	
	network, no matter what the current +VTD setting is.	
	1255 - a single DTMF tone will be transmitted for a time <duration> (in 10 r</duration>	ns
	multiples), no matter what the current +VTD setting is.

80000ST10025a Rev. 24 - 2016-09-07

+VTS - DTMF To	ones Transmission	SELINT 2
	Note: this commands operates in voice mode only (see	e +FCLASS).
	Note: the character P does not correspond to any DTMF tone, but it is in a pause of 3 seconds between the preceding and succeeding DTMF strin	
AT+VTS=?	Test command provides the list of supported <b><dtmf>s</dtmf></b> and the list of supported <b><duration>s</duration></b> in the format:	
Reference	(list of supported <dtmf>s)[,(list of supported <dura 3GPP TS 27.007 and TIA IS-101</dura </dtmf>	ation>s)]

#### **3.5.4.6.2.** Tone Duration - +VTD

+VTD - Tone Duration	<b>SELINT 0 / 1</b>	
AT+VTD[=	Set command sets the length of tones transmitted with +VTS command.	
<duration>]</duration>		
	Parameter:	
	<duration> - duration of a tone</duration>	
	0 - the duration of every single tone is dependent on the network (factory default)	
	1255 - duration of every single tone in $1/10$ sec.	
	Note: If parameter is omitted the behavior of Set command is the same as Read command.	
AT+VTD?	Read command reports the current Tone Duration, in the format:	
	<duration></duration>	
AT+VTD=?	Test command provides the list of supported <b><duration>s</duration></b> in the format:	
	(list of supported <duration>s)</duration>	
Reference	3GPP TS 27.007 and TIA IS-101	

+VTD - Tone Duration	SELINT 2	
AT+VTD=	Set command sets the length of tones transmitted with +VTS command.	
<duration></duration>		
	Parameter:	
	<duration> - duration of a tone</duration>	
	0 - the duration of every single tone is dependent on the network (factory default)	
	1255 - duration of every single tone in 1/10 sec.	
AT+VTD?	Read command reports the current Tone Duration, in the format:	
	<duration></duration>	
AT+VTD=?	Test command provides the list of supported <b><duration>s</duration></b> in the format:	
	(list of supported <duration>s)</duration>

#### 3.5.4.7. Commands For GPRS

#### 3.5.4.7.1. GPRS Mobile Station Class - +CGCLASS

+CGCLASS - GPRS	Mobile Station Class         SELINT 0 / 1	
AT+CGCLASS Set command sets the GPRS class according to <class> parameter.</class>		
[= <class>]</class>		
	Parameter:	
	<class> - GPRS class</class>	
	"B" - GSM/GPRS (factory default)	
	"CG" - class C in GPRS only mode (GPRS only)	
	"CC" - class C in circuit switched only mode (GSM only)	
	Note: the setting is saved in NVM (and available on following reboot).	
	Note: if parameter <b><class></class></b> is omitted, then the behaviour of Set command is the same as Read command.	
AT+CGCLASS?	Read command returns the current value of the GPRS class in the format:	
	+CGLASS: <class></class>	
AT+CGCLASS=?	Test command reports the range for the parameter <b><class></class></b>	

+CGCLASS - GPRS	mobile station class SELINT 2	
AT+CGCLASS= [ <class>]</class>	Set command sets the GPRS class according to <b><class></class></b> parameter.	
	Parameter: <b><class></class></b> - GPRS class "B" - GSM/GPRS (factory default) "CG" - class C in GPRS only mode (GPRS only) "CC" - class C in circuit switched only mode (GSM only)	
	Note: the setting is saved in NVM (and available on following reboot).	
AT+CGCLASS?	Read command returns the current value of the GPRS class in the format: +CGLASS: <class></class>	
AT+CGCLASS=?	Test command reports the range for the parameter <b><class></class></b>	

## 3.5.4.7.2. GPRS Attach Or Detach - +CGATT

+CGATT - GPRS A	attach Or Detach	SELINT 0 / 1	
AT+CGATT[=	Execution command is used to attach the terminal to, o	Execution command is used to attach the terminal to, or detach the terminal from,	
<state>]</state>	the GPRS service depending on the parameter <b><state></state></b> .		
	Parameter: <state attachment<="" gprs="" of="" td=""></state>		
0 - detached

## 3.5.4.7.3. GPRS Event Reporting - +CGEREP

+CGEREP - GPRS I	Event Reporting	SELINT 2
AT+CGEREP= [ <mode>[,<bfr>]]</bfr></mode>		
	Parameters: <b>mode</b> - controls the processing of <b>URCs</b> specifie 0 - Buffer unsolicited result codes in the <b>TA</b> . If <b>TA</b>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 185 of 717

80000ST10025a Rev. 24 - 2016-09-07

+CGEREP - GPRS		SELINT 2
	oldest one can be discarded. No codes are forwarded	ed to the <b>TE</b> .
	1 - Discard unsolicited result codes when <b>TA-TE</b> link	is reserved (e.g. in on-line
	data mode); otherwise forward them directly to the	< <b>e</b>
	2 - Buffer unsolicited result codes in the TA when TA-	
	on-line data mode) and flush them to the TE when	
	available; otherwise forward them directly to the T	
	   	de > 1 or 2 is entered:
	0 - TA buffer of unsolicited result codes defined within	n this command is cleared
	when <b><mode>=1</mode></b> or <b>2</b> is entered.	
	1 - TA buffer of unsolicited result codes defined within	n this command is flushed to
	the TE when <b><mode>=1</mode></b> or <b>2</b> is entered (OK respo	
	· · · ·	sinse shan be given before
	flushing the codes)	
	Unsolicited Result Codes	
	The following unsolicited result codes and the correspon	nding events are defined:
	+CGEV: REJECT <pdp type="">, <pdp addr=""></pdp></pdp>	
	A network request for PDP context activation occu	rred when the <b>TA</b> was
	unable to report it to the TE with a +CRING unso	
	automatically rejected	ficited result code and was
	automatically rejected	
	+CGEV: NW REACT <pdp_type>, <pdp_addr>, [&lt;</pdp_addr></pdp_type>	<cid>l</cid>
	The network has requested a context reactivation.	
		The selds that was used to
	reactivate the context is provided if known to <b>TA</b>	
	+CGEV: NW DEACT <pdp_type>, <pdp_addr>, [&lt;</pdp_addr></pdp_type>	<cid>l</cid>
	The network has forced a context deactivation. The	
		c <cid> that was used to</cid>
	activate the context is provided if known to <b>TA</b>	
	+CGEV: ME DEACT <pdp_type>, <pdp_addr>, [&lt;</pdp_addr></pdp_type>	(cid>)
	The mobile equipment has forced a context deactiv	
	used to activate the context is provided if known to	
	+CGEV: NW DETACH	
	The network has forced a GPRS detach. This impli	ies that all active contexts
	have been deactivated. These are not reported sepa	liatery
	+CGEV: ME DETACH	
	The mobile equipment has forced a GPRS detach.	This implies that all active
	contexts have been deactivated. These are not repo	
	contexts have been deactivated. These are not repo	nicu separatery
	+CGEV: ME CLASS <class></class>	
	The mobile equipment has forced a change of MS	class. The highest available
	class is reported (see +CGCLASS)	enuss. The ingliest available
	Class is reported (See TOOLASS)	
T+CGEREP?	Read command returns the current <mode> and <bfr> so</bfr></mode>	ettings in the format

80000ST10025a Rev. 24 - 2016-09-07

+CGREG - GPRS I	Network Registration Status SELINT 2
	<ci>- cell ID in hexadecimal format.</ci>
	Note: <b><lac></lac></b> and <b><ci></ci></b> are reported only if <b><mode>=2</mode></b> and the mobile is registered on some network cell.
AT+CGREG?	Read command returns the status of result code presentation mode < <b>n</b> > and the integer < <b>stat</b> > which shows whether the network has currently indicated the registration of the terminal in the format:
	+CGREG: <n>,<stat>[,<lac>,<ci>]</ci></lac></stat></n>
	Note: <b><lac></lac></b> and <b><ci></ci></b> are reported only if <b><mode>=2</mode></b> and the mobile is registered on some network cell.
AT+CGREG=?	Test command returns supported values for parameter <b><n></n></b>
Reference	3GPP TS 27.007

#### **3.5.4.7.5. Define PDP Context - +CGDCONT**

+CGDCONT - Define	PDP Context SELINT 0 / 1
AT+CGDCONT[=	Set command specifies PDP context parameter values for a PDP context identified
[ <cid></cid>	by the (local) context identification parameter, <b><cid></cid></b>
[, <pdp_type></pdp_type>	
[, <apn></apn>	Parameters:
[, <pdp_addr></pdp_addr>	<cid> - (PDP Context Identifier) numeric parameter which specifies a particular</cid>
[, <d_comp></d_comp>	PDP context definition.
[, <h_comp></h_comp>	1max - where the value of max is returned by the Test command
[, <pd1></pd1>	<pdp_type> - (Packet Data Protocol type) a string parameter which specifies the</pdp_type>
[,[,pdN]]]]]]]]]	type of packet data protocol
	"IP" - Internet Protocol
	<apn> - (Access Point Name) a string parameter which is a logical name that is</apn>
	used to select the GGSN or the external packet data network. If the value
	is empty ("") or omitted, then the subscription value will be requested.
	<b><pdp_addr></pdp_addr></b> - a string parameter that identifies the terminal in the address space
	applicable to the PDP. The allocated address may be read using the
	+CGPADDR command.
	<d_comp> - numeric parameter that controls PDP data compression</d_comp>
	0 - off (default if value is omitted)
	1 - on
	<h_comp> - numeric parameter that controls PDP header compression</h_comp>
	0 - off (default if value is omitted)
	1 - on
	<pd1>, …, <pdn> - zero to N string parameters whose meanings are specific to the</pdn></pd1>
	<pdp_type></pdp_type>
	Note: a special form of the Set command, +CGDCONT= <cid>, causes the values</cid>
	for context number <b><cid></cid></b> to become undefined.

**AT Commands Reference Guide** 80000ST10025a Rev. 24 – 2016-09-07

## 3.5.4.8. Commands For Battery Charger

# **3.5.4.8.1.** Battery Charge - +CBC

+CBC - Battery Charge SELINT 0 / 1		SELINT 0/1
AT+CBC	Execution command returns the current Battery Charge status in +CBC: <bcs>,<bcl> where: <bcs> - battery charge status 0 - ME is powered by the battery 1 - ME has a battery connected, and charger pin is being powe 2 - ME does not have a battery connected 3 - Recognized power fault, calls inhibited <bcl> - battery charge level, only if <bcs>=0 0 - battery is exhausted, or ME does not have a battery connect 25 - battery charge remained is estimated to be 25% 50 - battery charge remained is estimated to be 50% 75 - battery charge remained is estimated to be 75% 100 - battery is fully charged. Note: <bcs>=1 indicates that the battery charger supply is insert</bcs></bcs></bcl></bcs></bcl></bcs>	n the format: ered ted ted and the battery
	<ul> <li>is being recharged if necessary with it. Supply for ME operation from VBATT pins.</li> <li>Note: without battery/power connected on VBATT pins or durin unit is not working, therefore values   bcs&gt;=2 and   bcs&gt;=3 will</li> <li>Note: <bcl> indicates battery charge level only if battery is contained.</bcl></li> </ul>	ng a power fault the l never appear.
	is not connected	
AT+CBC?	Read command has the same effect as Execution command.	
AT+CBC=?	Test command returns parameter values supported as a compound For compatibility with previous versions, Test command returns +CBC: (0-2),(0-100)	
	An enhanced version of Test command has been defined: provides the complete range of values for <b><bcs></bcs></b> and <b><bcl></bcl></b> . Note: although <b>+CBC</b> is an execution command, ETSI 07.0	
	command to be defined.	requires the rest
AT+CBC=??	Enhanced test command returns the complete range of values for	or <b><bcs></bcs></b> and <b><bcl></bcl></b> :
	+CBC: (0-3),(0-100)	
Example	AT+CBC +CBC: 0,75	

80000ST10025a Rev. 24 - 2016-09-07

+CBC - Battery Charg	e SI	<mark>ELINT 0 / 1</mark>
	ОК	
Note	The <b>ME</b> does not make differences between being powered by a power supply on the VBATT pins, so it is not possible to distinguis two cases.	
Reference	3GPP TS 27.007	

+ CBC - Battery Charge SELINT 2	
AT+CBC	Execution command returns the current Battery Charge status in the format:
	+CBC: <bcs>,<bcl></bcl></bcs>
	where:
	<b><bcs></bcs></b> - battery status
	0 - ME is powered by the battery
	1 - ME has a battery connected, and charger pin is being powered
	2 - ME does not have a battery connected
	3 - Recognized power fault, calls inhibited
	 <b>bcl&gt;</b> - battery charge level, only if <b>bcs&gt;=0</b>
	0 - battery is exhausted, or <b>ME</b> does not have a battery connected
	<ul><li>25 - battery charge remained is estimated to be 25%</li><li>50 - battery charge remained is estimated to be 50%</li></ul>
	75 - battery charge remained is estimated to be 50%
	100 - battery is fully charged.
	Note: <b><bcs></bcs></b> =1 indicates that the battery charger supply is inserted and the battery is being recharged if necessary with it. Supply for <b>ME</b> operations is taken anyway from <b>VBATT</b> pins.
	Note: without battery/power connected on <b>VBATT</b> pins or during a power fault the unit is not working, therefore values <b><bcs>=2</bcs></b> and <b><bcs>=3</bcs></b> will never appear.
	Note: <bcl> indicates battery charge level only if battery is connected and charger is not connected</bcl>
AT+CBC=?	Test command returns parameter values supported as a compound value.
	+CBC: (0-3),(0-100)
	Note: although +CBC is an execution command, ETSI 07.07 requires the Test
<b>D</b> 1	command to be defined.
Example	AT+CBC +CBC: 0,75
	OK
Note	The ME does not make differences between being powered by a battery or by a
	power supply on the VBATT pins, so it is not possible to distinguish between these
D.C	two cases.

# 3.5.5. 3GPP TS 27.005 AT Commands for SMS and CBS

## **3.5.5.1.** General Configuration

#### 3.5.5.1.1. Select Message Service - +CSMS

+CSMS - Select M	essage Service SELINT 0	<mark>/ 1</mark>
AT+CSMS	Set command selects messaging service <service>. It returns the types of me</service>	
[= <service>]</service>	supported by the ME:	C
	Parameter:	
	<pre><service> 0 - The syntax of SMS AT commands is compatible with GSM 27.005 (     default)</service></pre>	factory
	Set command returns current service setting along with the types of me supported by the ME:	essages
	+CSMS: <service>,<mt>,<mo>,<bm></bm></mo></mt></service>	
	where:	
	<mt> - mobile terminated messages support</mt>	
	0 - type not supported	
	1 - type supported <b>(mo)</b> - mobile originated messages support	
	0 - type not supported	
	1 - type supported	
	<pre>&gt;bm&gt; - broadcast type messages support</pre>	
	0 - type not supported	
	1 - type supported	
	Note: If parameter is omitted then the behavior of Set command is the same a command.	ıs Read
AT+CSMS?	Read command reports current service setting along with supported messag in the format:	e types
	+CSMS: <service>,<mt>,<mo>,<bm></bm></mo></mt></service>	
	where:	
	<service> - messaging service (see above)</service>	
	<mt> - mobile terminated messages support (see above)</mt>	
	<mo> - mobile originated messages support (see above)</mo>	
	<pre><bm> - broadcast type messages support (see above)</bm></pre>	
AT+CSMS=?	Test command reports a list of all services supported by the device. The sup	pported
D.C	value of the parameter <service>.</service>	
Reference	GSM 27.005; 3GPP TS 23.040; 3GPP TS 23.041	

80000ST10025a Rev. 24 - 2016-09-07

+CSMS - Select M	essage Service SELINT 2
AT+CSMS=	Set command selects messaging service <service>. It returns the types of messages</service>
<service></service>	supported by the ME:
	Parameter:
	<pre>service&gt;</pre>
	0 - The syntax of SMS AT commands is compatible with GSM 27.005 (factory
	default)
	Set command returns the types of messages supported by the <b>ME</b> :
	+CSMS: <mt>,<mo>,<bm></bm></mo></mt>
	where:
	<mt> - mobile terminated messages support</mt>
	0 - type not supported
	1 - type supported
	<mo> - mobile originated messages support</mo>
	0 - type not supported
	1 - type supported
	 <b>bm&gt;</b> - broadcast type messages support
	0 - type not supported 1 - type supported
AT+CSMS?	Read command reports current service setting along with supported message types
	in the format:
	in the format.
	+CSMS: <service>,<mt>,<mo>,<bm></bm></mo></mt></service>
	where:
	<service> - messaging service (see above)</service>
	<mt> - mobile terminated messages support (see above)</mt>
	<mo> - mobile originated messages support (see above)</mo>
	<pre><bm> - broadcast type messages support (see above)</bm></pre>
AT+CSMS=?	Test command reports the supported value of the parameter <b><service< b="">&gt;.</service<></b>

#### **3.5.5.1.2.** Preferred Message Storage - +CPMS

+CPMS - Preferre	ed Message Storage SELINT 0 / 1
AT+CPMS[=	Set command selects memory storages <memr>, <memw> and <mems> to be</mems></memw></memr>
<memr></memr>	used for reading, writing, sending and storing SMs.
[, <memw></memw>	
[, <mems>]]]</mems>	Parameters:
	<memr> - memory from which messages are read and deleted</memr>
	"SM" - SIM SMS memory storage
	"ME" - ME internal storage
	<memw> - memory to which writing and sending operations are made</memw>
	"SM" - SIM SMS memory storage

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 203 of 717

80000ST10025a Rev. 24 - 2016-09-07

+CPMS - Preferre	d Message Storage SELINT 0 / 1	
	<mems> - memory to which received SMs are preferred to be stored "SM" - SIM SMS memory storage</mems>	
	The command returns the memory storage status in the format:	
	+CPMS: <usedr>,<totalr>,<usedw>,<totalw>,<useds>,<totals></totals></useds></totalw></usedw></totalr></usedr>	
	<pre>where <usedr> - number of SMs stored into <memr> <totalr> - max number of SMs that <memr> can contain <usedw> - number of SMs stored into <memw> <totalw> max number of SMs that <memw> can contain <useds> - number of SMs stored into <mems> <totals> - max number of SMS that <mems> can contain</mems></totals></mems></useds></memw></totalw></memw></usedw></memr></totalr></memr></usedr></pre>	
	Note: The only supported memory storage for writing and sending SMs is the S internal memory "SM", so <b><memw>=<mems>=''SM''</mems></memw></b> .	SIM
	Note: the received class 0 SMS are stored in the "ME" memory regardless <b><mems></mems></b> setting and they are automatically deleted at power off.	the
	Note: If all parameters are omitted the behavior of Set command is the same Read command.	e as
AT+CPMS?	Read command reports the message storage status in the format:	
	+CPMS: <memr>,<usedr>,<totalr>,<memw>,<usedw>,<totalw>,<mems>,<useds>,<totals></totals></useds></mems></totalw></usedw></memw></totalr></usedr></memr>	
	where <b><memr></memr></b> , <b><memw></memw></b> and <b><mems></mems></b> are the selected storage memories reading, writing and storing respectively.	for
AT+CPMS=?	Test command reports the supported values for parameters <b><memr></memr></b> , <b><memw></memw></b>	and
Example	<pre><mems> AT+CPMS? +CPMS: "SM",5,10,"SM",5,10</mems></pre>	
	OK you have 5 out of 10 SMS SIM positions occupied	
Reference	GSM 27.005	

	+CPMS - Preferred Message Storage	<mark>SELINT 2</mark>
	Note: the behaviour of command +CPMS differs depending on whether or not the improve	ed SMS commands
	operation mode has been enabled (see <b>#SMSMODE</b> )	
H		

#### <mark>(#SMSMODE=0)</mark>

#	AT+CPMS=	Set command selects memory storages <memr>, <memw> and <mems> to</mems></memw></memr>
S	<memr></memr>	be used for reading, writing, sending and storing SMs.

#### 3.5.5.1.3. Message Format - +CMGF

+CMGF - Message l	Format SELINT 0 / 1
AT+CMGF[=	Set command selects the format of messages used with send, list, read and write
[ <mode>]]</mode>	commands.
	Parameter: <b><mode></mode></b> 0 - PDU mode, as defined in GSM 3.40 and GSM 3.41 (factory default) 1 - text mode Note: issuing <b>AT+CMGF<cr></cr></b> is the same as issuing the Read command.
	Note: issuing <b>AT+CMGF=<cr></cr></b> is the same as issuing the command <b>AT+CMGF=0<cr></cr></b> .
AT+CMGF?	Read command reports the current value of the parameter <b><mode></mode></b> .
AT+CMGF=?	Test command reports the supported value of <b><mode></mode></b> parameter.
Reference	GSM 27.005

+CMGF - Message	+CMGF - Message Format SELINT 2	
AT+CMGF= [ <mode>]</mode>	Set command selects the format of messages used with send, list, read and write commands.	
	Parameter: <b>mode&gt;</b> 0 - PDU mode, as defined in GSM 3.40 and GSM 3.41 (factory default) 1 - text mode	
AT+CMGF?	Read command reports the current value of the parameter <b><mode></mode></b> .	
AT+CMGF=?	Test command reports the supported value of <b><mode></mode></b> parameter.	
Reference	GSM 27.005	

## 3.5.5.2. Message Configuration

#### 3.5.5.2.1. Service Center Address - +CSCA

+CSCA - Service Center Address SELINT 0 / 1		
AT+CSCA[=	Set command sets the Service Center Address to be used for t	nobile originated SMS
<pre>[<number></number></pre>	transmissions.	-
[, <type>]]]</type>		
	Parameter:	
	<number> - SC phone number in the format defined by <typ< td=""><td>e&gt;</td></typ<></number>	e>
	<type> - the type of number</type>	
	129 - national numbering scheme	
	145 - international numbering scheme (contains the character	er "+")
	Note: to use the SM service, is mandatory to set a Service Co	enter Address at which

+CSCA - Service C	Center Address	<mark>SELINT 0 / 1</mark>
	service requests will be directed.	
	Note: in Text mode, this setting is used by send and we mode, setting is used by the same commands, but only SMSC address coded into the <b><pdu></pdu></b> parameter equals zero.	y when the length of the
	Note: the current settings are stored through +CSAS	
	Note: issuing <b>AT+CSCA<cr></cr></b> is the same as issuing the	Read command.
	Note: issuing AT+CSCA= <cr> causes an OK result cod</cr>	le to be issued.
AT+CSCA?	Read command reports the current value of the SCA in the	e format:
	+CSCA: <number>,<type></type></number>	
	Note: if SCA is not present the device reports an error me	ssage.
AT+ CSCA=?	Test command returns the <b>OK</b> result code.	
Reference	GSM 27.005	

+CSCA -Service C	enter Address SELINT 2
AT+CSCA=	Set command sets the Service Center Address to be used for mobile originated SMS
<number></number>	transmissions.
[, <type>]</type>	
	Parameter:
	<number> - SC phone number in the format defined by <type></type></number>
	<type> - the type of number</type>
	129 - national numbering scheme
	145 - international numbering scheme (contains the character "+")
	Note: to use the SM service, is mandatory to set a Service Center Address at which service requests will be directed.
	Note: in Text mode, this setting is used by send and write commands; in PDU mode, setting is used by the same commands, but only when the length of the SMSC address coded into the <b><pdu></pdu></b> parameter equals zero.
	Note: the current settings are stored through +CSAS
AT+CSCA?	Read command reports the current value of the SCA in the format:
	+CSCA: <number>,<type></type></number>
	Note: if SCA is not present the device reports an error message.
AT+CSCA=?	Test command returns the <b>OK</b> result code.

+CSI	+CSMP - Set Text Mode Parameters SELINT 2		
М	[, <vp></vp>		
S	[, <pid></pid>	Parameters:	
Μ	[, <dcs>]]]]</dcs>	<fo> - first octet of 3GPP TS 23.040 SMS-SUBMIT in integer format</fo>	
Ο	17 1111	(default 17, i.e. SMS-SUBMIT with validity period in relative format).	
D		As first octet of a PDU has the following bit field description (we'll	
Е		refer to bit[7]bit[6]bit[5]bit[4]bit[3]bit[2]bit[1]bit[0]):	
=		<b>bit</b> [1] <b>bit</b> [0]: Message Type Indicator, 2-bit field describing the message	
0		type: all the combinations are converted in [01] (default is [01]);	
		[00] - converted in [01]	
		[01] - SMS-SUBMIT	
		[10] - converted in [01]	
#		[11] - converted in [01]	
S		<b>bit</b> [2]: Reject Duplicates, 1-bit field: user is not responsible for setting	
M		this bit and, if any set, it will have no meaning (default is [0]);	
S		<b>bit</b> [4]bit[3]: Validity Period Format, 2-bit field indicating whether or	
M		not the Validity Period field is present (default is [10]):	
0		[00] - Validity Period field <i>not present</i>	
D		[01] - Validity Period field present in <i>enhanced format</i> : it is currently	
Ē		converted in [00], i.e. not present	
=		[10] - Validity Period field present in <i>relative format</i> , (i.e. integer type,	
0		see below)	
Ŭ		[11] - Validity Period field present in <i>absolute format</i> (i.e. quoted	
		time-string type); we strongly suggest to not use this format	
		because its implementation is currently under refinement	
#		<b>bit</b> [5]: Status Report Request, 1-bit field indicating the MS is requesting	
S		a status report (default is [0]);	
M		[0] - MS is not requesting a status report	
S		[1] - MS is requesting a status report	
M		<b>bit</b> [6]: User Data Header Indicator, 1-bit field: user is not responsible	
0		for setting this bit and, if any set, it will have no meaning (default	
D		is [0]);	
Ē		<b>bit</b> [7]: Reply Path, 1-bit field indicating the request for Reply Path	
=		(default is [0]);	
0		[0] - Reply Path not requested	
-		[1] - Reply Path requested	
		<pre><vp>- depending on <fo> setting: if <fo> asks for a Validity Period in</fo></fo></vp></pre>	
		<i>relative format</i> <b><vp></vp></b> shall be integer type (default 167, i.e. 24 hours);	
#		if <b><fo></fo></b> asks for a Validity Period in <i>absolute format</i> we strongly	
S		suggest to modify it in <i>relative format</i> , because the implementation of	
M		this topic is currently under refinement and it is currently not possible	
S		to set $\langle \mathbf{vp} \rangle$ with a quoted time string type.	
M		(for <i>relative format</i> only:)	
0		$0143 - (\langle vp \rangle + 1) \times 5 \text{ minutes};$	
Ď		144167 - 12 hours + (( <b><vp></vp></b> - 143) x 30 minutes);	
Ē		$168196 - ( - 166) \times 1 day;$	
=		197255 - ( <vp> - 192) x 1 week;</vp>	
	Ш	······································

#### 3.5.5.2.4. Select Cell Broadcast - +CSCB

+CSCB -Select Cell B	roadcast Message Types SELINT 0 / 1
AT+CSCB[=	Set command selects which types of Cell Broadcast Messages are to be received by
[ <mode></mode>	the device.
[, <mids></mids>	
[, <dcss>]]]]</dcss>	Parameter:
	<mode></mode>
	0 - the message types defined by <b><mids></mids></b> and <b><dcss></dcss></b> are accepted (factory default)
	1 - the message types defined by <b><mids></mids></b> and <b><dcss></dcss></b> are rejected
	<mids> - Message Identifiers, string type: all different possible combinations of the CBM message identifiers; default is empty string ("").</mids>
	<dcss> - Data Coding Schemes, string type: all different possible combinations of CBM data coding schemes; default is empty string ("").</dcss>
	Note: the current settings are stored through +CSAS
	Note: issuing <b>AT+CSCB<cr></cr></b> is the same as issuing the Read command.
	Note: issuing <b>AT+CSCB=<cr></cr></b> is the same as issuing the command <b>AT+CSCB=0<cr></cr></b> .
AT+CSCB?	Read command reports the current value of parameters <b><mode></mode></b> , <b><mids></mids></b> and <b><dcss></dcss></b> .
AT+CSCB=?	Test command returns the range of values for parameter <b><mode></mode></b> .
Example	AT+CSCB? +CSCB: 1,"",""
	OK AT+CSCB=0,"0,1,300-315,450","0-3" (all CBMs are accepted, none is rejected) OK
Reference	GSM 27.005, 3GPP TS 23.041, 3GPP TS 23.038.

+CSCB -Select Cell Broadcast Message Types SELINT 2	
AT+CSCB=	Set command selects which types of Cell Broadcast Messages are to be received by
[ <mode>[,<mids></mids></mode>	the device.
[, <dcss>]]]</dcss>	
	Parameters:
	<mode></mode>
	0 - the message types defined by <b><mids></mids></b> and <b><dcss></dcss></b> are accepted (factory default)
	1 - the message types defined by <b><mids></mids></b> and <b><dcss></dcss></b> are rejected
	<mids> - Message Identifiers, string type: all different possible combinations of the CBM message identifiers; default is empty string (""). <dcss> - Data Coding Schemes, string type: all different possible combinations of</dcss></mids>
	CBM data coding schemes; default is empty string ("").

80000ST10025a Rev. 24 - 2016-09-07

+CSCB -Select Cel	-CSCB -Select Cell Broadcast Message Types SELINT 2	
	Note: the current settings are stored through +CSAS	8
AT+CSCB?	Read command reports the current value of parame	ters <b><mode></mode></b> , <b><mids></mids></b> and
	<dcss>.</dcss>	
AT+CSCB=? Test command returns the range of values for parameter <mode>.</mode>		neter <b><mode></mode></b> .
Example	AT+CSCB? +CSCB: 1,"",""	
	OK AT+CSCB=0,"0,1,300-315,450","0-3" OK	ted, none is rejected)

#### 3.5.5.2.5. Save Settings - +CSAS

+CSAS - Save Settings	SELINT 0/1
AT+CSAS	Execution command saves settings which have been made by the +CSCA, +CSMP
[= <profile>]</profile>	and +CSCB commands in local non volatile memory.
	Parameter:
	<profile></profile>
	$\hat{0}$ - it saves the settings to NVM (factory default).
	1n - SIM profile number; the value of n depends on the SIM and its max is 3.
	Note: certain settings may not be supported by the SIM and therefore they are always saved to NVM, regardless the value of <b><profile></profile></b> .
	Note: If parameter is omitted the settings are saved in the non volatile memory.
	Note: +CSCB <mids> (Message Identifiers ) parameter can be saved to SIM only if the "Cell broadcast message identifier selection" file is present on the SIM itself. This file, if present, has storage for only a single set of data. Therefore, it is not possible to save different <mids> in different SIM profiles; <mids> value, once</mids></mids></mids>
	changed and saved, will be the same for all SIM profiles.
AT+CSAS?	Read command has the same effect as Execution command with parameter omitted.
AT+CSAS=?	Test command returns the possible range of values for the parameter <b><profile></profile></b> .
Reference	GSM 27.005

+CSAS - Save Settings	SELINT 2
AT+CSAS [= <profile>]</profile>	Execution command saves settings which have been made by the +CSCA, +CSMP and +CSCB commands in local non volatile memory.
	Parameter: <b><profile></profile></b> 0 - it saves the settings to NVM (factory default). 1n - SIM profile number; the value of n depends on the SIM and its max is 3.
	Note: certain settings may not be supported by the SIM and therefore they are

page 216 of 717

## 3.5.5.4. Message Sending And Writing

#### 3.5.5.4.1. Send Message - +CMGS

+CMGS - Send Messa	age SELINT 0 / 1
(PDU Mode)	(PDU Mode)
AT+CMGS=	Execution command sends to the network a message.
<length></length>	
_	Parameter:
	<li>length&gt; - length of the PDU to be sent in bytes (excluding the SMSC address)</li>
	octets).
	7164
	After command line is terminated with <b><cr></cr></b> , the device responds sending a four
	character sequence prompt:
	<cr><lf><greater_than><space> (IRA 13, 10, 62, 32)</space></greater_than></lf></cr>
	and waits for the specified number of bytes.
	Note: the <b>DCD</b> signal shall be in <b>ON</b> state while PDU is given.
	Note: the echoing of given characters back from the TA is controlled by echo
	command E
	Note: the PDU shall be hexadecimal format (each octet of the PDU is given as two
	IRA character long hexadecimal number) and given in one line.
	Note: when the length octet of the SMSC address (given in the PDU) equals zero,
	the SMSC address set with command +CSCA is used; in this case the SMSC Type-
	of-Address octet shall not be present in the PDU.
	To send the message issue <b>Ctrl-Z</b> char $(0x1A hex)$ .
	To exit without sending the message issue <b>ESC</b> char $(0x1B hex)$ .
	If message is successfully sent to the network, then the result is sent in the format:
	If message is successionly sent to the network, then the result is sent in the format.
	+CMGS: <mr></mr>
	where
	<mr> - message reference number.</mr>
	Note: if message sending fails for some reason, an error code is reported.
	Note: care must be taken to ensure that during the command execution, which may
	take several seconds, no other SIM interacting commands are issued.
(Text Mode)	(Text Mode)
()

80000ST10025a Rev. 24 - 2016-09-07

+CMGS - Send Messa	
AT+CMGS= <da></da>	Execution command sends to the network a message.
[, <toda>]</toda>	
	Parameters:
	<da> - destination address, string type.</da>
	<toda> - type of destination address</toda>
	129 - number in national format
	145 - number in international format (contains the "+")
	After command line is terminated with <b><cr></cr></b> , the device responds sending a four
	character sequence prompt:
	<cr><lf><greater_than><space> (IRA 13, 10, 62, 32)</space></greater_than></lf></cr>
	After this prompt text can be entered; the entered text should be formatted as follows:
	<ul> <li>- if current <dcs> (see +CSMP) indicates that GSM03.38 default alphabet is used and current <fo> (see +CSMP) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set, then ME/TA converts the entered text into GSM alphabet, according to GSM 27.005, Annex A; backspace can be used to delete last character and carriage returns can be used.</fo></dcs></li> <li>- if current <dcs> (see +CSMP) indicates that 8-bit or UCS2 data coding scheme is used or current <fo> (see +CSMP) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is set, the entered text should consist of two IRA character long hexadecimal numbers which ME/TA converts into 8-bit octet (e.g. the 'asterisk' will be entered as 2A (IRA50 and IRA65) and this will be converted to an octet with integer value 0x2A)</fo></dcs></li> </ul>
	Note: the <b>DCD</b> signal shall be in <b>ON</b> state while text is entered.
	Note: the echoing of entered characters back from the TA is controlled by echo command $\mathbf{E}$
	To cond the massage issue $Ctul Z$ ober $(0u1A here)$
	To send the message issue <b>Ctrl-Z</b> char (0x1A hex). To exit without sending the message issue <b>ESC</b> char (0x1B hex).
	If message is successfully sent to the network, then the result is sent in the format:
	+CMGS: <mr></mr>
	where
	<mr> - message reference number.</mr>
	Note: if message sending fails for some reason, an error code is reported.
	Note: care must be taken to ensure that during the command execution, which may take several seconds, no other SIM interacting commands are issued.

+CM	GW - Write Message T	o Memory	SELINT 2
		messages can only be stored with status 0 or 1.	
#			
S M S	(Text Mode) AT+CMGW[= <da> [,<toda></toda></da>	(Text Mode) Execution command writes in the <b><memw></memw></b> memory stor message.	rage a new
M	[, <stat>]]]</stat>		
O D E		<ul> <li>Parameters:</li> <li><da> - destination address, string type represented in the character set (see +CSCS).</da></li> </ul>	currently selected
= 1		<toda> - type of destination address. 129 - number in national format 145 - number in international format (contains the "+")</toda>	
# S		<pre><stat> - message status. "REC UNREAD" - new received message unread (defa messages) "BEC BEAD", received message read</stat></pre>	ult for DELIVER
M S M		"REC READ" - received message read "STO UNSENT" - message stored not yet sent (default messages) "STO SENT" - message stored already sent	for SUBMIT
O D E		After command line is terminated with <b><cr></cr></b> , the device	responds sending a
= 1		four character sequence prompt: <cr><lf><greater_than><space> (IRA 13, 10, 62, 3)</space></greater_than></lf></cr>	2)
#		After this prompt text can be entered; the entered text she follows:	ould be formatted as
S M S		<ul> <li>if current <dcs> (see +CSMP) indicates that GSM03.33 used and current <fo> (see +CSMP) indicates that 3GH User-Data-Header-Indication is not set:</fo></dcs></li> </ul>	*
M O D E =		<ul> <li>if TE character set other than "HEX" (reference of Character Set +CSCS): ME/TA converts the GSM 7 bit default alphabet according to TS27.005; backspace can be used to delete carriage returns can be used;</li> </ul>	e entered text into rules of Annex A in
1 # S		<ul> <li>if TE character set is "HEX": the entered tex two IRA character long hexadecimal numbe converts into the GSM 7 bit default alphabe (IRA 49 and 55) will be converted to charac default alphabet 23)).</li> </ul>	rs which ME/TA et characters. (e.g. 17
M S M O		after every <b><cr></cr></b> entered by the user the sequence <b><cr><lf><greather_than><space></space></greather_than></lf></cr></b> is sent to the T - if current <b><dcs></dcs></b> (see <b>+CSMP</b> ) indicates that 8-bit or U scheme is used or current <b><fo></fo></b> (see <b>+CSMP</b> ) indicates	CS2 data coding

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 264 of 717

80000ST10025a Rev. 24 - 2016-09-07

<mark>IGW - Write Messag</mark>		
	23.040 TP-User-Data-Header-Indication is set, the entered text should consist of two IRA character long hexadecimal numbers which ME/TA converts into 8-bit octet (e.g. the <b>'asterisk'</b> will be entered as <b>2A</b> ( <b>IRA</b> ) and <b>IRA65</b> ) and this will be converted to an octet with integer value <b>0x</b>	50
	Note: the <b>DCD</b> signal shall be in ON state while text is entered.	
	Note: the echoing of entered characters back from the TA is controlled by echo command $\mathbf{E}$	
	To write the message issue Ctrl-Z char (0x1A hex).	
	To exit without writing the message issue ESC char (0x1B hex).	
	If message is successfully written in the memory, then the result is sent in the format:	
	+CMGW: <index></index>	
	where: <index> - message location index in the memory <memw>.</memw></index>	
	If message storing fails for some reason, an error code is reported.	
	Note: care must be taken to ensure that during the command execution, no other SIM interacting commands are issued.	)
	Note: it is possible to save a concatenation of at most 10 SMs; the maxim number of chars depends on the <b><dcs></dcs></b> : 1530 chars if 3GPP TS 23.038 default alphabet is used, 1340 chars if 8-bit is used, 670 chars if UCS2 is used. If entered text is longer than this maximum value an error is raised.	um
	Note: in text mode, not only SUBMIT messages can be stored in SIM as p #SMSMODE=0, but also DELIVER messages.	ber
	The type of saved message depends upon the current <fo> parameter (see +CSMP). For a DELIVER message, current <vp> parameter (see +CSMI is used to set the message Service Centre Time Stamp <scts>, so it has to an absolute time string, e.g. "09/01/12,11:15:00+04".</scts></vp></fo>	
	SUBMIT messages can only be stored with status "STO UNSENT" or "S SENT"; DELIVER messages can only be stored with status "REC UNREAD" or "REC READ".	TC
AT+CMGW=?	Test command returns the <b>OK</b> result code.	
Reference	GSM 27.005	
Note	To avoid malfunctions is suggested to wait for the +CMGW: <index> or +CMS ERROR: <err> response before issuing further commands.</err></index>

80000ST10025a Rev. 24 – 2016-09-07

+FRM - Receive Data	Modulation	SELINT 2
AT+FRM=?Test command returns all supported values of the parameter <mod>.</mod>		od>.
Note: test command result is without command echo.		
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.6.2.5. Transmit Data With HDLC Framing - +FTH

+FTH - Transmit Data	With HDLC Framing	<b>SELINT 0 / 1 / 2</b>
AT+FTH= <mod></mod>	Execution command causes the module to transmit facsimile protocol and the modulation defined by the parameter <b><mod></mod></b> .	data using HDLC
	Parameter: <b>mod&gt;</b> - carrier modulation	
	3 - V21/300 bps	
AT+FTH=?	Test command returns all supported values of the parameter <b><mo< b=""> Note: test command result is without command echo.</mo<></b>	od>.
Reference	ITU T.31 and TIA/EIA-578-A specifications	

#### 3.5.6.2.6. Receive Data With HDLC Framing - +FRH

+FRH - Receive Data	With HDLC Framing	<b>SELINT 0 / 1 / 2</b>
AT+FRH= <mod></mod>	Execution command causes the module to receive facsimile protocol and the modulation defined by the parameter <b><mod></mod></b> . Parameter:	data using HDLC
	<mod> - carrier modulation</mod>	
	3 - V21/300 bps	
AT+FRH=?	Test command returns all supported values of the parameter <b><mo< b=""></mo<></b>	od>.
	Note: test command result is without command echo.	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

#### 3.5.6.3. Serial Port Control

#### 3.5.6.3.1. Select Flow Control - +FLO

+FLO - Select Flow (	Control Specified By Type	<mark>SELINT 0 / 1 / 2</mark>
AT+FLO= <type></type>	Set command selects the flow control behaviour of the serial port in both directions:	
	from <b>DTE</b> to <b>DTA</b> and from <b>DTA</b> to <b>DTE</b> .	
	Parameter:	
	<type> - flow control option for the data on the serial por</type>	t
	0 - flow control None	
	1 - flow control Software (XON-XOFF)	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 272 of 717

80000ST10025a Rev. 24 – 2016-09-07

+FLO - Select Flo	ow Control Specified By Type	<b>SELINT 0 / 1 / 2</b>
	2 - flow control Hardware (CTS-RTS) – (factory default)	
	Note: This command is a shortcut of the <b>+IFC</b> command.	
	Note: <b>+FLO's</b> settings are functionally a subset of <b>&amp;K's</b> ones.	
AT+FLO?	Read command returns the current value of parameter <b><type></type></b>	
	Note: If flow control behavior has been set with <b>AT&amp;Kn</b> command with the parameter that is not allowed by <b>AT+FLO</b> the read command <b>AT+FLO</b> ? will return:	
	+FLO: 0	
AT+FLO=?	Test command returns all supported values of the parameter <t< td=""><td>ype&gt;.</td></t<>	ype>.
	Note: test command result is without command echo.	
Reference	ITU T.31 and TIA/EIA-578-A specifications	

### 3.5.6.3.2. Serial Port Rate - +FPR

+FPR - Select Serial Po	ort Rate SELINT 0 / 1 / 2
AT+FPR= <rate></rate>	Set command selects the the serial port speed in both directions, from <b>DTE</b> to <b>DTA</b> and from <b>DTA</b> to <b>DTE</b> . When autobauding is selected, then the speed is detected automatically.
	Parameter: <b>rate&gt;</b> - serial port speed selection 0 - autobauding
	Note: it has no effect and is included only for backward compatibility with landline modems
AT+FPR?	Read command returns the current value of parameter <b><rate></rate></b>
AT+FPR=?	Test command returns all supported values of the parameters <b><rate></rate></b> . Note: test command result is without command echo.
Reference	ITU T.31 and TIA/EIA-578-A specifications

### **3.5.6.3.3.** Double Escape Character Replacement - +FDD

+FDD - Double Escap	e Character Replacement Control	<b>SELINT 0 / 1 / 2</b>
AT+FDD= <mode></mode>	Set command concerns the use of the <b><dle><sub></sub></dle></b> pair to escape characters ( <b>&lt;10h&gt;&lt;10h&gt;</b> ) in user data.	encode consecutive
	Parameter <mode> 0 - currently the only available value. The DCE decode of either <dle><dle> or discard. The DCE encode of</dle></dle></mode>

# 3.5.7. Custom AT Commands

#### **3.5.7.1.** General Configuration AT Commands

#### 3.5.7.1.1. Network Selection Menu Availability - +PACSP

+PACSP - Network Sel	lection Menu Availability	SELINT 2
AT+PACSP?	<b>PACSP?</b> Read command returns the current value of the <b><mode></mode></b> parameter in the <b>:</b>	
	+PACSP <mode></mode>	
	where:	
	<mode> - PLMN mode bit (in CSP file on the SIM)</mode>	
	0 - restriction of menu option for manual PLMN selection.	
	1 - no restriction of menu option for Manual PLMN selection.	
AT+PACSP=?	Test command returns the <b>OK</b> result code.	
Note	For all SW versions except 13.00.xxx, the command is available or	nly if the ENS
	functionality has been previously enabled (see <u>#ENS</u> ).	
	For 13.00.xxx SW version the command is always available, irresp	pective of ENS
	functionality setting.	

#### **3.5.7.1.2.** Manufacturer Identification - #CGMI

<b>#CGMI - Manufacture</b>	r Identification	<mark>SELINT 0 / 1</mark>
AT#CGMI	Execution command returns the device manufacturer identitic command echo. The output depends on the choice made command.	
AT#CGMI?	Read command has the same effect as the Execution command	

<b>#CGMI - Manufacture</b>	r Identification	<mark>SELINT 2</mark>
AT#CGMI	Execution command returns the device manufacturer identification code with	
	command echo. The output depends on the choice made through	#SELINT
	command.	
AT#CGMI=?	Test command returns the <b>OK</b> result code.	

#### 3.5.7.1.3. Model Identification - #CGMM

<b>#CGMM - Model Iden</b>	tification	<mark>SELINT 0 / 1</mark>
AT#CGMM	Execution command returns the device model identification co	ode with command
	echo.	
AT#CGMM?	Read command has the same effect as the Execution command	

<b>#CGMM - Model Iden</b>	tification	<mark>SELINT 2</mark>
AT#CGMM	Execution command returns the device model identification code	e with command

<b>#CGMM - Model Identification</b>		SELINT 2
	echo.	
AT#CGMM=?	Test command returns the <b>OK</b> result code.	

#### 3.5.7.1.4. Revision Identification - #CGMR

#CGMR - Revision Identification SELINT 0 / 1		<mark>SELINT 0 / 1</mark>
AT#CGMR	Execution command returns device software revision number with	th command echo.
AT#CGMR?	Read command has the same effect as the Execution command	

#CGMR - Revision Identification SELINT 2		SELINT 2
AT#CGMR	Execution command returns device software revision number with	command echo.
AT#CGMR=?	Test command returns the <b>OK</b> result code.	

#### 3.5.7.1.5. Product Serial Number Identification - #CGSN

<b>#CGSN - Product Seria</b>	Il Number Identification	<mark>SELINT 0 / 1</mark>
AT#CGSN	Execution command returns the product serial number, identified	l as the IMEI of the
	mobile, with command echo.	
AT#CGSN?	Read command has the same effect as the Execution command	

#CGSN - Product Serial Number IdentificationSELINT 2		
AT#CGSN	Execution command returns the product serial number, identified as the IMEI of the	
	mobile, with command echo.	
AT#CGSN=?	Test command returns the <b>OK</b> result code.	

#### 3.5.7.1.6. International Mobile Subscriber Identity (IMSI) - #CIMI

<b>#CIMI - International Mobile Subscriber Identity (IMSI)</b> SELINT 0 / 1			
AT#CIMI	Execution command returns the international mobile subscriber identity, identified		
	as the IMSI number, with command echo.		
AT#CIMI?	Read command has the same effect as the Execution command		

#CIMI - International Mobile Subscriber Identity (IMSI) SELINT 2			
AT#CIMI	Execution command returns the international mobile subscriber identity, identified		
	as the IMSI number, with command echo.		
AT#CIMI=?	Test command returns the <b>OK</b> result code.		

### **3.5.7.1.7. Read ICCID (Integrated Circuit Card Identification) - #CCID**

<b>#CCID - Read ICCID</b>		SELINT 2
AT#CCID	Execution command reads on SIM the ICCID (card identification	n number that
	provides a unique identification number for the SIM)	
AT#CCID=?	Test command returns the <b>OK</b> result code.

<b>#SMSMODE - SMS C</b>	Commands Operation Mode	<mark>SELINT 2</mark>
	QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS) 2 –when FDN are enabled, check for presence of SMS service centre address in the FDN phonebook; if not present, SMS cannot be sent	
AT#SMSMODE?	Read command reports whether the improved SMS commands operation mode is enabled or not, in the format: #SMSMODE: <mode> (<mode> described above)</mode></mode>	
AT#SMSMODE=?	Test command reports the supported range of values for parameter	
Note	The SMS commands affected by <b>#SMSMODE</b> are: <b>+CPMS</b> , <b>+C</b> <b>+CMGW</b> , <b>+CMGL</b> , <b>+CMGR</b> , <b>+CMGD</b> , <b>+CSMP</b>	NMI, +CMGS,

#### 3.5.7.1.13. PLMN List Selection - #PLMNMODE

<b>#PLMNMODE - PLM</b>	N List Selection	SELINT 0/1
AT#PLMNMODE=	Set command selects the list of PLMN names to be used currentl	
[ <plmnlist>]</plmnlist>		5
	Parameter:	
	<plmnlist> - list of PLMN names</plmnlist>	
	0 - PLMN names list, currently used in commands like +COPS	or <b>#MONI</b> , is
	fixed and depends upon currently selected interface (see #SE	LINT) (default for
	all products, except GE866-QUAD, GE865-QUAD, GE864-	DUAL V2,
	GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-C	
	DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD A	AUTO, GE910-
	QUAD V3 and GE910-GNSS)	
	1 - PLMN names list is not fixed and can be updated in newer s	
	(default for GE866-QUAD, GE865-QUAD, GE864-DUAL V	
	GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL8	
	GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and	
	GE910-GNSS)	
	Note: <plmnlist> parameter is saved in NVM</plmnlist>	
AT#PLMNMODE?	Read command reports whether the currently used list of PLMN	names is fixed or
	not, in the format:	
	<b>#PLMNMODE: <plmnlist></plmnlist></b>	
	( <plmnlist> described above)</plmnlist>	
AT#PLMNMODE=?	Test command returns the supported range of values for paramet	er <b><plmnlist></plmnlist></b> .

<b>#PLMNMODE – PLMN List Selection</b> SELINT		SELINT 2
AT#PLMNMODE=	Set command selects the list of PLMN nat	mes to be used currently
[ <plmnlist>]</plmnlist>		
	Parameter:	
	plmnlist> - list of PLMN names	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 282 of 717

80000ST10025a Rev. 24 - 2016-09-07

	0 - PLMN names list, currently used in commands like +COPS or #MONI, is fixed and depends upon currently selected interface (see #SELINT) (default for all products, except GE865-QUAD, GE864- DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-
	QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-
	QUAD V3 and GE910-GNSS) 1 - PLMN names list is not fixed and can be updated in newer software
	versions (default for GE865-QUAD, GE864-DUAL V2, GL865-DUAL,
	GL865-QUAD, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD V3 and GE910-
	GNSS)
	2 - PLMN names list is the same of 1, but updated with
	<b>#PLMNUPDATE</b> command.
	Note: <b><plmnlist></plmnlist></b> parameter is saved in NVM
AT#PLMNMODE?	Read command reports whether the currently used list of PLMN names is
	fixed or not, in the format:
	<b>#PLMNMODE: <plmnlist></plmnlist></b>
	( <plmnlist> described above)</plmnlist>
AT#PLMNMODE=?	Test command returns the supported range of values for parameter
	<plmnlist>.</plmnlist>

### 3.5.7.1.14. Update PLMN List - #PLMNUPDATE

<b>#PLMNUPDATE – Update PL</b>	MN List SELINT 2
	Set command adds a new entry or updates an existing entry of the module PLMN list. Parameter: < <b>action&gt;</b> - command action 0 - remove the entry with selected <mcc> and <mnc>. Parameter <plmnname> will be ignored 1 - update the entry with selected <mcc> and <mnc> if it is already present, otherwise add it. 2 - remove all entries. Parameters <mcc> and <mnc> are not used in this case.</mnc></mcc></mnc></mcc></plmnname></mnc></mcc>
	<mcc> - Mobile Country Code. String value, length 3 digits.<mnc> - Mobile Network Code. String value, min length 2 digits, max length 3 digits.<plmnname> - Name of the PLMN; string value, max length 30 characters.</plmnname></mnc></mcc>

AT#SHDN=?	Test command returns the OK result code.		

### **3.5.7.1.18.** Extended Reset - #Z

<mark>#Z – Extended reset</mark>		SELINT 2
AT#Z= <profile></profile>	Set command loads both base section and extended section of the profile stored with AT&W and selected with AT&P. Parameter <profile></profile>	ne specified user
	0 – user profile 0 1 – user profile 1	
AT#Z=?	Test command tests for command existence.	

### 3.5.7.1.19. Periodic Reset - #ENHRST

<b>#ENHRST – Periodic ReSeT</b>		SELINT 2
<mark>#ENHRST – Periodic ReSeT</mark> AT#ENHRST= <mod>,<dela y&gt;</dela </mod>	Parameters: <b>mod&gt;</b> 0 – disables the unit reset (factory default) 1 – enables the unit reset only for one time 2 – enables the periodic unit reset <b>delay&gt;</b> - time interval after that the unit reboots; nume	y> minutes. eric value in minutes
AT#ENHRST?	Note: the settings are saved automatically in NVM only is 2. Any change from 0 to 1 or from 1 to 0 is not stored Note: the particular case AT#ENHRST=1,0 causes the in reboot. In this case if AT#ENHRST=1,0 follows an AT of stores some parameters in NVM, it is recommended to in least 5 seconds before to issue AT#ENHRST=1,0, to per NVM storing. Read command reports the current parameter settings for command in the format:	in NVM mmediate module command that nsert a delay of at rmit the complete

<b>#ENHRST – Periodic F</b>	ReSeT SELINT 2
	# EHNRST: < mod >[, <delay>,<remaintime>]</remaintime></delay>
	<remaintime> - time remaining before next reset</remaintime>
AT#ENHRST=?	Test command reports supported range of values for parameters <b><mod></mod></b> and <b><delay></delay></b> .
Examples	AT#ENHRST=1,60
	Module reboots after 60 minutes
	AT#ENHRST=1,0
	Module reboots now
	AT#ENHRST=2,60
	Module reboots after 60 minutes and indefinitely after every following power on

#### 3.5.7.1.20. Fast shutdown configuration - #FASTSHDN

#FASTSHDN – Fast shutdown (	configuration SELINT 2
AT#FASTSHDN[=	Set the GPIO fast shutdown configuration.
<enable>[,<gpio>[,</gpio></enable>	
<spare>[,<spare>[,<spare>[,<s< td=""><td></td></s<></spare></spare></spare>	
pare>]]]]]	Parameters:
	<enable></enable>
	It is used to enable or disable the fast shutdown execution via GPIO:
	<b>0</b> - The fast shutdown execution via GPIO is disabled (default)
	1 - The fast shutdown execution via GPIO is enabled
	This parameter is stored in NVM.
	<gpio> It sets which Gpio execute the fast shdn. When the GPIO number configured with <gpio> goes from the High level to the low level and the <enable> is set to 1, the module execute immediately the fast shutdown.</enable></gpio></gpio>
	This parameter is stored in NVM.
	The format <b>AT#FASTSHDN</b> forces the module to execute immediately the fast shutdown.
	Note: it is necessary that the Gpio set whit <b><gpio></gpio></b> is used for the fast

80000ST10025a Rev. 24 – 2016-09-07

<b>#QTEMP - Query Tem</b>	perature Overflow	SELINT 2
	temperature working range of your module	
#QTEMP=?	Test command reports supported range of values for parameter <b><mode></mode></b> .	
Note	The device should not be operated out of its <i>temperature working range</i> , elsewhere proper functioning of the device is not ensured.	

#### **3.5.7.1.23.** Temperature Monitor - #TEMPMON

#TEMPMON - Temp	perature Monitor SELINT 2
AT#TEMPMON=	Set command sets the behaviour of the module internal temperature monitor.
<mod></mod>	
[, <urcmode></urcmode>	Parameters:
[, <action></action>	<mod></mod>
[, <hyst_time></hyst_time>	0 - sets the command parameters.
[, <gpio>]]]]</gpio>	1 - triggers the measurement of the module internal temperature, reporting the result in the format:
	#TEMPMEAS: <level>,<value></value></level>
	where:
	<li>evel&gt; - threshold level</li>
	-2 - extreme temperature lower bound (see Note)
	-1 - operating temperature lower bound (see Note) 0 - normal temperature
	1 - operating temperature upper bound (see Note)
	2 - extreme temperature upper bound (see Note)
	<value> - actual temperature expressed in Celsius degrees.</value>
	Setting of the following optional parameters has meaning only if <mod>=0</mod>
	<urc>wrcmode&gt; - URC presentation mode.</urc>
	0 - it disables the presentation of the temperature monitor URC
	1 - it enables the presentation of the temperature monitor URC, whenever the module internal temperature reaches either operating or extreme levels; the unsolicited message is in the format:
	#TEMPMEAS: <level>,<value></value></level>
	where: <level> and <value> are as before</value></level>
	<action> - sum of integers, each representing an action to be done whenever the module internal temperature reaches either operating or extreme levels (default is 0). If <action> is not zero, it is mandatory to set the</action></action>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 291 of 717

80000ST10025a Rev. 24 - 2016-09-07

	<hyst_time> parameter too.</hyst_time>
	07 - as a sum of:
	0 - no action
	1 - automatic shut-down when the temperature is beyond the extreme
	bounds
	<ul> <li>2 - RF TX circuits automatically disabled (using +CFUN=2) when operating temperature bounds are reached. When the temperature is back to normal the module is brought back to the previous state, before RF TX disabled.</li> <li>4 - the output pin <gpio> is tied HIGH when operating temperature bounds are reached; when the temperature is back to normal the output pin <gpio> is tied LOW. If this <action> is required, it is mandatory to</action></gpio></gpio></li> </ul>
	<pre>set the <gpio> parameter too. <hyst_time> - hysteresis time: all the actions happen only if the extreme or operating bounds are maintained at least for this period. This</hyst_time></gpio></pre>
	parameter is needed and required if <b><action></action></b> is not zero. 0255 - time in seconds
	<b>GPIO</b> - GPIO number. valid range is "any output pin" (see "Hardware User's Guide"). This parameter is needed and required only if <b>action&gt;=4</b> is required.
	Note: the URC presentation mode <b><urcmode></urcmode></b> is related to the current AT instance only (see <b>+cmux</b> ); last <b><urcmode></urcmode></b> settings are saved for every instance as extended profile parameters, thus it is possible to restore them either if the multiplexer control channel is released and set up, back and forth.
	Note: last <b><action></action></b> , <b><hyst_time></hyst_time></b> and <b><gpio></gpio></b> settings are saved in NVM too, but they are not related to the current CMUX instance only (see <b>+cmux</b> ).
AT#TEMPMON?	Read command reports the current parameter settings for <b>#TEMPMON</b> command in the format:
	#TEMPMON: <urcmode>,<action>[,<hyst_time>[,<gpio>]]</gpio></hyst_time></action></urcmode>
AT#TEMPMON=?	Test command reports the supported range of values for parameters <b><mod></mod></b> , <b><urcmode></urcmode></b> , <b><action></action></b> , <b><hyst_time></hyst_time></b> and <b><gpio></gpio></b>

#### 3.5.7.1.24. Temperature monitor configuration - #TEMPCFG

#TEMPCFG – Temperature monitor configuration SELINT 2			
AT#TEMPCFG= <tempexlowbound></tempexlowbound>	This parameter command manages the temperature range used by the TEMPMON command		
[, <tempoplowbound> [,<tempopupbound> [,<tempexupbound>]]]</tempexupbound></tempopupbound></tempoplowbound>	Parameters:		
	<tempexlowbound> - the extreme temperature lower limit</tempexlowbound>		
	<tempoplowbound> - the operating temperature lower limit</tempoplowbound>		
	<tempopupbound> - the operating temperature upper limit</tempopupbound>		
	<tempexupbound> - the extreme temperature upper limit</tempexupbound>		
	Note 1: The extreme temperature lower limit must not be lower than lower limit (see TEMPMON for temperature limits);		
	Note 2: the operating temperature lower limit must not be lower than the extreme temperature lower limit, nor lower than its minimum admitted value (see TEMPMON for temperature limits);		
	Note 3: the operating temperature upper limit must not be lower than the operating temperature lower limit, nor lower than its minimum admitted value (see TEMPMON for temperature limits);		
	Note 4: the extreme temperature upper limit must not be lower than the operating temperature upper limit		
	Note 5: The extreme temperature upper limit must not be higher than upper limit (see TEMPMON for temperature limits).		
	Note 5: the temperature set are saved in NvM, so at the next reboot the last temperature set is active instead of the factory default values.		
	Note 6: a factory reset restores the factory default values.		
AT#TEMPCFG?	read the currently active temperature range :		
	#TEMPCFG: <tempexlowbound>,</tempexlowbound>		
	<tempoplowbound>, <tempopupbound>,</tempopupbound></tempoplowbound>		
	<tempexupbound></tempexupbound>		
AT#TEMPCFG =?	Test command returns the supported range of <b><tempexlowbound></tempexlowbound></b> , <b><tempoplowbound></tempoplowbound></b> ,

80000ST10025a Rev. 24 - 2016-09-07

<tempexupbound> parameters.</tempexupbound>
//test the currently set values AT#TEMPCFG? #TEMPCFG: -30,-10,55,80
OK //set a new temperature range AT#TEMPCFG=-40,-15,55,85 OK
//read the currently set values AT#TEMPCFG? #TEMPCFG: -40,-15,55,85 OK

#### 3.5.7.1.25. Set General Purpose Output - #SGPO

#SGPO - Set Gene	ral Purpose Output SELINT 0 / 1
AT#SGPO[=	Set command sets the value of the general purpose output pin GPIO2.
[ <stat>]]</stat>	
	Parameter:
	<stat></stat>
	0 - output pin cleared to 0 (Low)
	1 - output pin set to 1 ( <b>High</b> )
	Note: the <b>GPIO2</b> is an OPEN COLLECTOR output, the command sets the transistor base level, hence the open collector output is negated: <b>AT#SGPO=0</b> sets the open collector output <b>High</b> <b>AT#SGPO=1</b> sets the open collector output <b>Low</b> A pull up resistor is required on pin <b>GPIO2</b> .
	Note: issuing <b>AT#SGPO<cr></cr></b> is the same as issuing the Read command.
	Note: issuing <b>AT#SGPO=<cr></cr></b> is the same as issuing the command <b>AT#SGPO=0<cr></cr></b> .
AT#SGPO?	Read command reports the <b>#SGPO</b> command setting, hence the opposite status of
	the open collector pin in the format:
	#SGPO: <stat>.</stat>
AT#SGPO=?	Test command reports the supported range of values of parameter <b><stat></stat></b> .

	Parameters: <b><pin></pin></b> defines which GPIO shall be used as ALARM pin instead of GPIO6/ALARM. For the <b><pin></pin></b> actual range check the "Hardware User Guide". Default value is 6.
	Note: the setting is saved in NVM Note: setting <b><pin></pin></b> equal to 0 disables the ALARM pin
AT#ALARMPIN?	Read command returns the current parameter settings for <b>#ALARMPIN</b> command in the format: <b>#ALARMPIN: <pin></pin></b>
AT#ALARMPIN=?	Test command reports the supported range of values for parameter <b><pin></pin></b> .

#### 3.5.7.1.29. STAT\_LED GPIO Setting - #SLED

<b>#SLED - STAT_LED</b>	GPIO Setting SELINT 2	
AT#SLED= <mode></mode>	Set command sets the behaviour of the STAT_LED GPIO	
[, <on_duration></on_duration>		
[, <off_duration>]]</off_duration>	Parameters:	
	<mode> - defines how the STAT_LED GPIO is handled</mode>	
	0 - GPIO tied Low (default for GE866-QUAD, GL865-DUAL, GL865-DUA	
	V3, GL865-QUAD V3 GL868-DUAL, GL868-DUAL V3, GL865-QUAD, G	E910-
	QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS)	
	1 - GPIO tied <b>High</b>	
	2 - GPIO handled by Module Software (factory default for all products exce	
	GE866-QUAD, GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3 GL86	
	DUAL, GL868-DUAL V3, GL865-QUAD, GE910-QUAD, GE910-QUAD A	AUTO,
	GE910-QUAD V3 and GE910-GNSS )	
	3 - GPIO is turned on and off alternatively, with period defined by the sum	
	<on_duration> + <off_duration></off_duration></on_duration>	
	<pre><on_duration> - duration of period in which STAT_LED GPIO is tied High</on_duration></pre>	while
	<mode>=3</mode>	
	1100 - in tenth of seconds (default is 10)	1 .1
	<pre><off_duration> - duration of period in which STAT_LED GPIO is tied Low <mode>=3</mode></off_duration></pre>	while
	1100 - in tenth of seconds (default is 10)	
	Note: values are saved in NVM by command #SLEDSAV	
	Note: at module boot the <b>STAT_LED</b> GPIO is always tied <b>High</b> and holds this	
	value until the first NVM reading.	
AT#SLED?	Read command returns the <b>STAT_LED</b> GPIO current setting, in the format:	
	#SLED: <mode>,<on_duration>,<off_duration></off_duration></on_duration></mode>	
AT#SLED=?	Test command returns the range of available values for parameters <b><mode></mode></b> ,	
	Test command returns the range of available values for parameters <b>mode</b> ,

#SLED - STAT_LED GPIO Setting	SELINT 2
<on_duration> and <off_duration>.</off_duration></on_duration>	

# 3.5.7.1.30. Save STAT\_LED GPIO Setting - #SLEDSAV

#SLEDSAV - Save S	#SLEDSAV - Save STAT_LED GPIO Setting SELINT 2	
AT#SLEDSAV	Execution command saves <b>STAT_LED</b> setting in NVM.	
	Note: if LED pin shares a user GPIO pin, <b>AT#GPIO=<pin></pin></b> , always higher priority than <b>AT#SLEDSAV</b> command, theref both commands, the <b>AT#SLED?</b> read command has no mean scenario. After system reboot the pin status is that stored by <b>AT#GPIO=<pin>,<mode>,<dir>,1.</dir></mode></pin></b> Customer must choose the scope of the pin: GPIO or LED.	fore if customer use
AT#SLED=?	Test command returns <b>OK</b> result code.	

# 3.5.7.1.31. Analog/Digital Converter Input - #ADC

<b>#ADC - Analog/Digital</b>	Converter Input SELINT 0 / 1
AT#ADC[= <adc>,<mode></mode></adc>	Execution command reads pin< <b>adc</b> > voltage, converted by ADC, and outputs it in the format:
[, <dir>]]</dir>	#ADC: <value></value>
	where: <value> - pin<adc> voltage, expressed in mV</adc></value>
	Parameters: <b>adc&gt;</b> - index of pin For the number of available ADCs see HW User Guide
	<mode> - required action 2 - query ADC value <dir> - direction; its interpretation is currently not implemented 0 - no effect.</dir></mode>
	If all parameters are omitted the command reports all pins voltage, converted by ADC, in the format:
	#ADC: <value>[<cr><lf>#ADC: <value>[]]</value></lf></cr></value>
	Note: The command returns the last valid measure.
AT#ADC?	Read command has the same effect as Execution command when all parameters are omitted.
AT#ADC=?	Test command reports the supported range of values of the command parameters <ade>, <mode> and <dir>.</dir></mode></ade>

80000ST10025a Rev. 24 - 2016-09-07

<b>#ADC - Read Anal</b>	og/Digital Converter input SELINT 2
AT#ADC=	Execution command reads pin <adc> voltage, converted by ADC, and outputs it in</adc>
[ <adc>,<mode></mode></adc>	the format:
[, <dir>]]</dir>	
	#ADC: <value></value>
	where:
	<value> - pin<adc> voltage, expressed in mV</adc></value>
	Parameters:
	<adc> - index of pin</adc>
	For the number of available ADCs see HW User Guide
	<mode> - required action</mode>
	2 - query ADC value
	<dir> - direction; its interpretation is currently not implemented 0 - no effect.</dir>
	Note: The command returns the last valid measure.
AT#ADC?	Read command reports all pins voltage, converted by ADC, in the format:
	#ADC: <value>[<cr><lf>#ADC: <value>[]]</value></lf></cr></value>
AT#ADC=?	Test command reports the supported range of values of the command parameters
	<adc>, <mode> and <dir>.</dir></mode></adc>

#### 3.5.7.1.32. Digital/Analog Converter Control - #DAC

<b>#DAC - Digital/Analog</b>	Converter Control SELINT 0 / 1
AT#DAC[=	Set command enables/disables the DAC_OUT pin.
<enable></enable>	
[, <value>]]</value>	Parameters:
	<enable> - enables/disables DAC output.</enable>
	0 - disables pin; it is in high impedance status (factory default)
	1 - enables pin; the corresponding output is driven
	<value> - scale factor of the integrated output voltage; it must be present if</value>
	<enable>=1</enable>
	01023 - 10 bit precision
	Note: integrated output voltage = MAX_VOLTAGE * value / 1023
	Note: if all parameters are omitted then the behaviour of Set command is the same as the Read command.
AT#DAC?	Read command reports whether the DAC_OUT pin is currently enabled or not,
	along with the integrated output voltage scale factor, in the format:
	#DAC: <enable>,<value></value></enable>
AT#DAC=?	Test command reports the range for the parameters <b><enable></enable></b> and <b><value></value></b> .

#### Auxiliary Voltage Output Control - #VAUX 3.5.7.1.33.

<b>#VAUX- Auxiliary </b>	Voltage Output Control SELINT 0 / 1
AT#VAUX[= <n>,</n>	Set command enables/disables the Auxiliary Voltage pins output.
<stat>]</stat>	
•	Parameters:
	<n> - VAUX pin index</n>
	1 - there is currently just one VAUX pin
	<stat></stat>
	0 - output off
	1 - output on
	2 - query current value of VAUX pin
	Note: when <b><stat>=2</stat></b> and command is successful, it returns:
	#VAUX: <value></value>
	where:
	<value> - power output status</value>
	0 - output off
	1 - output on
	Note: If all parameters are omitted the command has the same behaviour as Read command.
	Note: for the GPS product: if the Auxiliary Voltage pin output is disabled while GPS is powered on they'll both also be turned off.
	Note: for the CDS products of commonds CDSD CDSDS CDSDW control
	Note: for the GPS products, at commands \$GPSP, \$GPSPS, \$GPSWK control VAUX and can interfere with AT# command.
AT#VAUX?	
ΑΙ#νΑυλ:	Read command reports whether the Auxiliary Voltage pin output is current
	enabled or not, in the format:
	#VAUX: <value></value>
AT#VAUX=?	Test command reports the supported range of values for parameters <b><n></n></b> , <b><stat></stat></b> .
NOTE:	Command available only on GE864-QUAD and GC864-QUAD with SW 10.00.xx

<b>#VAUX- Auxiliar</b>	y Voltage Output Control	SELINT 2
AT#VAUX= [ <n>,<stat>]</stat></n>	Set command enables/disables the Auxiliary Voltage	pins output.
	Parameters: <n> - VAUX pin index 1 - there is currently just one VAUX pin</n>	
	<stat> 0 - output off 1 - output on</stat>	

Mod. 0809 2011-07 Rev.2

#V24 - V24 Output Pins Control		SELINT 2
	<staten> - AT commands serial port interface hardware pin state</staten>	2
AT#V24=?	Test command reports supported range of values for parameters	<pin> and <state>.</state></pin>

#### 3.5.7.1.38. **RF Transmission Monitor Mode - #TXMONMODE**

<b>#TXMONMODE – RF Transm</b>	ission Monitor Mode SELINT 2
AT#TXMONMODE=	Set <b>TXMON</b> pin behaviour.
<mode></mode>	
	Parameter:
	<mode></mode>
	<ul> <li>0 - TXMON pin goes high when a call is started and it drops down when the call is ended. It also goes high when a location update starts, and it drops down when the location update procedure stops. Finally it goes high during SMS transmission and receiving. Even if the TXMON in this case is set as GPIO in output, the read command AT#GPIO=5,2 returns #GPIO:2,0, as the GPIO is in alternate mode.</li> <li>1 - TXMON is set in alternate mode and the Timer unit controls its state. TXMON goes high before power ramps start raising and drops down after power ramps stop falling down. This behaviour is repeated for every transmission burst.</li> </ul>
	Note: if user sets GPIO 5 as input or output the TXMON does not follow the above behaviour.
	Note: if <b><mode></mode></b> is change during a call from 1 to 0, TXMON goes down. If it is restored to 1, TXMON behaves as usual, following the bursts.
AT#TXMONMODE?	Read command reports the <b><mode></mode></b> parameter set value, in the format:
	#TXMONMODE: <mode></mode>
AT#TXMONMODE =?	Test command reports the supported values for <b><mode></mode></b> parameter.

#### **3.5.7.1.39. Battery And Charger Status - #CBC**

#CBC- Battery	And Charger Status	<mark>SELINT 0 / 1</mark>
AT#CBC	Execution command returns the current Battery and Ch	harger state in the format:
	#CBC: <chargerstate>,<batteryvoltage></batteryvoltage></chargerstate>	
	where:	
	<chargerstate> - battery charger state</chargerstate>	
	0 - charger not connected	
	1 - charger connected and charging	
	2 - charger connected and charge completed

80000ST10025a Rev. 24 - 2016-09-07

#CBC- Battery And Charger Status		SELINT 0 / 1
	<batteryvoltage> - battery voltage in units of ten millivolts: it i voltage only if charger is not connected; if the charger is co depends on the charger voltage.</batteryvoltage>	2
AT#CBC?	Read command has the same meaning as Execution command.	
AT#CBC=?	Test command returns the <b>OK</b> result code.	

<b>#CBC- Battery And C</b>	harger Status	SELINT 2
AT#CBC	Execution command returns the current Battery and Charger state in the format:	
	#CBC: <chargerstate>,<batteryvoltage></batteryvoltage></chargerstate>	
	where:	
	<chargerstate> - battery charger state</chargerstate>	
	0 - charger not connected	
	1 - charger connected and charging	
	2 - charger connected and charge completed	
	<batteryvoltage> - battery voltage in units of ten millivolts: it is</batteryvoltage>	is the real battery
	voltage only if charger is not connected; if the charger is co	onnected this value
	depends on the charger voltage.	
AT#CBC=?	Test command returns the <b>OK</b> result code.	

#### 3.5.7.1.40. Fast Battery And Charger Status - #FASTCBC

<b>#FASTCBC – Fast Battery And</b>	l Charger Status SELINT 2
AT#FASTCBC	Execution command returns the current Battery and Charger state in the format: <b>#FASTCBC: <chargerstate>,<batteryvoltage></batteryvoltage></chargerstate></b> where: <b><chargerstate> -</chargerstate></b> battery charger state 0 - charger not connected 1 - charger connected and charging 2 - charger connected and charge completed <b><batteryvoltage> -</batteryvoltage></b> battery voltage in units of ten millivolts: it is the real battery voltage only if charger is not connected; if the charger is connected, this value depends on the charger voltage.
AT#FASTCBC?	Read command has the same meaning as Execution command.
AT#FASTCBC=?	Test command returns the <b>OK</b> result code.

## 3.5.7.1.41. GPRS Auto-Attach Property - #AUTOATT

## **#AUTOATT - Auto-Attach Property**

SELINT 0/1

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

80000ST10025a Rev. 24 - 2016-09-07

<b>#AUTOATT - Auto-A</b>	ttach Property SELINT 0 / 1	
AT#AUTOATT	Set command enables/disables the TE GPRS auto-attach property when the module	e
[= <auto>]</auto>	is in GPRS class B (see AT+CGCLASS).	
	Parameter:	
	<auto></auto>	
	0 - disables GPRS auto-attach property	
	1 - enables GPRS auto-attach property (factory default): after the command	
	<b>#AUTOATT=1</b> has been issued (and at every following startup) the terminal will automatically try to attach to the GPRS service.	
	Note: If parameter is omitted then the behaviour of Set command is the same as Read command.	
AT#AUTOATT?	Read command reports whether the auto-attach property is currently enabled or no	t,
	in the format:	
	#AUTOATT: <auto></auto>	
AT#AUTOATT=?	Test command reports available values for parameter <b><auto></auto></b> .	

<mark>#AUTOATT - Auto-A</mark>	ttach Property SELINT	<mark>2</mark>
AT#AUTOATT=	Set command enables/disables the TE GPRS auto-attach property.	
[ <auto>]</auto>		
	Parameter:	
	<auto></auto>	
	0 - disables GPRS auto-attach property	
	1 - enables GPRS auto-attach property (factory default): after the comman	d
	#AUTOATT=1 has been issued (and at every following startup) the ter	minal
	will automatically try to attach to the GPRS service.	
	2 - disables GPRS auto-attach property (available also for class "CG")	
AT#AUTOATT?	Read command reports whether the auto-attach property is currently enable	d or not,
	in the format:	
	#AUTOATT: <auto></auto>	
AT#AUTOATT=?	Test command reports available values for parameter <b><auto></auto></b> .	

#### 3.5.7.1.42. Multislot Class Control - #MSCLASS

#MSCLASS - Multis	lot Class Control SELINT 0
AT#MSCLASS[= <class>[,</class>	Set command sets the multislot class
<autoattach>]]</autoattach>	Parameters: <class> - multislot class; take care: class 7 is not supported. 16 - GPRS class 810 - GPRS class <autoattach> 0 - the new multislot class is enabled only at the next detach/attach or after</autoattach></class>

	seven cells in the neighbour list of the serving cell.	
	Execution command ( <b>AT#MONIZIP<cr></cr></b> ) reports GSM-r selected cell and dedicated channel (if exists).	elated information for
	4. If the last setting done by <b>#MONIZIP</b> is in the range format is as follows:	e [ <b>06</b> ], the output
	g)When extracting data for the serving cell the format is: #MONIZIP: <cc><nc>,<bsic>,<qual>,<lac>,<id>,&lt; <timadv></timadv></id></lac></qual></bsic></nc></cc>	<arfcn>, <dbm>,</dbm></arfcn>
	h)When extracting data for an adjacent cell, the format is: #MONIZIP: <lac>,<id>,<arfcn>,<dbm></dbm></arfcn></id></lac>	:
	where: <b><cc> -</cc></b> country code	
	< <b>nc</b> > - network operator code	
	<n> - progressive number of adjacent cell</n>	
	 sic> - base station identification code	
	<qual> - quality of reception</qual>	
	07 <lac> - localization area code</lac>	
	<id> - cell identifier</id>	
	<arfcn> - assigned radio channel</arfcn>	
	<dbm> - received signal strength in dBm</dbm>	
	<timadv> - timing advance</timadv>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 318 of 717

80000ST10025a Rev. 24 - 2016-09-07

#MONIZIP – Compre	essed Cell Monitor SELINT 2	
	Note: TA: <b><timadv></timadv></b> is reported only for the serving cell.	
	5. If the last setting done by <b>#MONIZIP</b> is 7, the execution command produces a table-like formatted output, as follows:	
	a. First row reports a complete set of GSM-related information for the serving cell:	
	#MONIZIP: <bsic>,<lac>,<id>,<arfcn>,<dbm>,<c1value>, <c2val ue&gt;,<timadv>,<qual>,<cc><nc><cr><lf></lf></cr></nc></cc></qual></timadv></c2val </c1value></dbm></arfcn></id></lac></bsic>	
	b. 2 <sup>nd</sup> to 7 <sup>th</sup> rows report a reduced set of GSM-related information for the cells in the neighbours:	
	#MONIZIP: <bsic>,<lac>,<id>,<arfcn>,<dbm>,<c1value>, <c2valu e&gt;[<cr><lf>]</lf></cr></c2valu </c1value></dbm></arfcn></id></lac></bsic>	
	where: <b><c1value></c1value></b> - C1 reselection parameter	
	<c2value> - C2 reselection parameter</c2value>	
	other parameters as before	
AT#MONIZIP=?	Test command reports the maximum number of cells, in the neighbour list of the serving cell excluding it, from which we can extract GSM-related information, along with the ordinal number of the current selected cell, in the format:	
	#MONIZIP: ( <maxcellno>,<cellset>)</cellset></maxcellno>	
	where: <b>MaxCellNo&gt;</b> - maximum number of cells, in the neighbour list of the serving cell and excluding it, from which we can extract GSM-related information. This value is always <b>6</b> .	
	<cellset> - the last setting done with command #MONIZIP.</cellset>	
Note	The refresh time of the measures is preset to 3 sec. The timing advance value is meaningful only during calls or GPRS transfers active.	
Note	The serving cell is the current serving cell or the last available serving cell, if the module loses coverage.	

#### 3.5.7.1.45. Serving Cell Information - #SERVINFO

#SERVINFO - Serving	Cell Information	SELINT 0/1	
AT#SERVINFO	Execution command reports information about serving cell, in the format:		
#SERVINFO: <b-arfcn>,<dbm>,<netnameasc>,<netcode>, <bsic>,<lac>,<ta>,<gprs>[,[<pb-arfcn>],[<nom>], <rac>[,<pat>]] where:</pat></rac></nom></pb-arfcn></gprs></ta></lac></bsic></netcode></netnameasc></dbm></b-arfcn>

	Where <mcc>: Mobile Country Code, 3 digits <mnc>: Mobile Network Code, 2 or 3 digits <lac>: Location Area Code string type; two byte location hexadecimal format (e.g. "00C3" equals 195 in decimal) <ci>: Cell Id (string type; two bytes in hexadecimal format 0, four bytes in hexadecimal format otherwise. <bsic>: Base Station Identity Code <bcch freq="">: Broadcast Control CHannel Freq absolute ( <rxlev>: RSSI level on BCCH channel <rxlev full="">: RSSI level on all TCH channel, in dedicated <rxlev sub="">: RSSI level on a subset of TCH channel, in dedicated <rxqual>: signal quality on BCCH channel, in idle mode <rxqual full="">: signal quality on all TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub="">: signal quality on a subset of TCH channel, in dedicated <rxqual sub=""></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxqual></rxlev></rxlev></rxlev></bcch></bsic></ci></lac></mnc></mcc>	t for <act> equal to (ARFCN) I mode edicated mode</act>
AT+CCED=?	Test command returns the <b>OK</b> result code.	

#### 3.5.7.1.47. +COPS Mode - #COPSMODE

#COPSMODE - +COPS Mode		<mark>SELINT 0 / 1</mark>
AT#COPSMODE [= <mode>]</mode>		(see +COPS). ducts (default)

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 322 of 717

80000ST10025a Rev. 24 - 2016-09-07

#COPSMODE - +COPS Mode SELINT 0 / 1		<mark>SELINT 0 / 1</mark>
	Note: The setting is saved in NVM (and available on following	reboot).
	Note: if parameter <b><mode></mode></b> is omitted the behaviour of Set com as Read command.	nmand is the same
AT#COPSMODE?	Read command returns the current behaviour of +COPS comm	and, in the format:
	#COPSMODE: <mode></mode>	
	where	
	<mode> - +COPS behaviour as seen before.</mode>	
AT#COPSMODE=?	Test command returns the range of available values for paramet	er <b><mode></mode></b> .
Note	It's suggested to reboot the module after every <b>#COPSMODE</b>	setting.

# 3.5.7.1.48. Query SIM Status - #QSS

#QSS – Query SIM Status	SELINT 0 / 1
AT#QSS[= [ <mode>]]</mode>	Set command enables/disables the Query SIM Status unsolicited indication in the ME.
	Parameter: <b>mode</b> - type of notification
	0 - disabled (factory default): it is possible only to query the current SIM status through Read command <b>AT#QSS?</b>
	1 - enabled: the ME informs at every SIM status change through the following basic unsolicited indication:
	#QSS: <status></status>
	where:
	<status> - current SIM status 0 - SIM NOT INSERTED</status>
	1 - SIM INSERTED
	Note: issuing <b>AT#QSS<cr></cr></b> is the same as issuing the Read command.
AT#QSS?	Read command reports whether the unsolicited indication <b>#QSS</b> is currently
	enabled or not, along with the SIM status, in the format:
	#QSS: <mode>,<status></status></mode>
	( <mode> and <status> are described above)</status></mode>
AT#QSS=?	Test command returns the supported range of values for parameter <b><mode< b="">&gt;.</mode<></b>

<b>#QSS – Query SIM Status</b>		<mark>SELINT 2</mark>
AT#QSS=	Set command enables/disables the Query SIM Status un	solicited

#DIALMODE - Dialing Mode SELINT 2		<mark>SELINT 2</mark>
AT#DIALMODE?	Read command returns current ATD dialling mode in the format	
	#DIALMODE: <mode></mode>	
AT#DIALMODE=?	Test command returns the range of values for parameter <b><mode< b="">&gt;</mode<></b>	

### 3.5.7.1.50. Automatic Call - #ACAL

<b>#ACAL - Automatic C</b>	all	SELINT 0 / 1
AT#ACAL[=	Set command enables/disables the automatic call function.	· · · · · · · · · · · · · · · · · · ·
[ <mode>]]</mode>		
	Parameter:	
	<mode></mode>	
	<ul> <li>0 - disables the automatic call function (factory default)</li> <li>1 - enables the automatic call function. If enabled (and &amp;D2 ha transition OFF/ON of DTR causes an automatic call to the (position 0) stored in the internal phonebook.</li> </ul>	
	Note: type of call depends on the last issue of command +FCLA	SS.
	Note: issuing <b>AT#ACAL<cr></cr></b> is the same as issuing the Read	command.
AT#ACAL?	Read command reports whether the automatic call function is cu not, in the format: #ACAL: <mode></mode>	rrently enabled or
AT#ACAL=?	Test command returns the supported range of values for paramet	ter <b><mode></mode></b> .
Note	See &Z to write and &N to read the number on module internal	

<b>#ACAL - Automa</b>	tic Call SELINT 2
AT#ACAL= [ <mode>]</mode>	Set command enables/disables the automatic call function.
	<ul> <li>Parameter:</li> <li><mode></mode></li> <li>0 - disables the automatic call function (factory default)</li> <li>1 - enables the automatic call function. If enabled (and &amp;D2 has been issued), the transition OFF/ON of DTR causes an automatic call to the first number (position 0) stored in the internal phonebook.</li> </ul>
	Note: type of call depends on the last issue of command +FCLASS.
AT#ACAL?	Read command reports whether the automatic call function is currently enabled or not, in the format:
	#ACAL: <mode></mode>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 326 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#ACAL - Automatic Ca</b>	all	SELINT 2
	Note: as a consequence of the introduction of the command #AC (Extended Automatic Call) it is possible that the Read Command supported by #ACALEXT but NOT supported by #ACAL.	
	AT#ACAL? #ACAL : 2	
	ОК	
	Due to this possible situation it is strongly recommended not to contemporaneously both commands.	use
AT#ACAL=?	Test command returns the supported range of values for parameter	ter <b><mode></mode></b> .
Note	See &Z to write and &N to read the number on module internal	phonebook.

### 3.5.7.1.51. Extended Automatic Call - #ACALEXT

#ACALEXT - Exten	ded Automatic Call SELINT	<mark>Г 0 / 1 / 2</mark>
AT#ACALEXT=	Set command enables/disables the extended automatic call function.	
<mode>,<index></index></mode>		
	Parameters:	
	<mode></mode>	
	0 - disables the automatic call function (factory default)	
	1 - enables the automatic call function from "ME" phonebook.	
	2 - enables the automatic call function from "SM" phonebook.	
	<index> - it indicates a position in the currently selected phonebook.</index>	
	If the extended automatic call function is enabled and <b>&amp;D2</b> has been issue	
	transition <b>OFF/ON</b> of <b>DTR</b> causes an automatic call to the number stored position <b><index></index></b> in the selected phonebook.	l in
	Note: type of call depends on the last issue of command +FCLASS.	
AT#ACALEXT?	Read command reports either whether the automatic call function is current enabled or not, and the last <b><index></index></b> setting in the format:	ntly
	#ACALEXT: <mode>,<index></index></mode>	
AT#ACALEXT=?	The range of available positions in a phonebook depends on the selected	
	phonebook. This is the reason why the test command returns three ranges	of
	values: the first for parameter <b><mode></mode></b> , the second for parameter <b><index></index></b>	▶ when
	"ME" is the chosen phonebook, the third for parameter <b><index></index></b> when "SI	M" is the
	chosen phonebook.	
Note	Issuing #ACALEXT causes the #ACAL <mode> to be changed.</mode>	
	Issuing AT#ACAL=1 causes the #ACALEXT <index> to be set to defau</index>	ılt.
	It is recommended to NOT use contemporaneously either #ACALEXT ar	nd

80000ST10025a Rev. 24 - 2016-09-07

#ACALEXT - Extended Automatic Call SELINT 0 / 1		<mark>SELINT 0 / 1 / 2</mark>
	#ACAL	
Note	See &Z to write and &N to read the number on module internal	phonebook.

### 3.5.7.1.52. Extended Call Monitoring - #ECAM

#ECAM - Extended Ca	all Monitoring	<mark>SELINT 0 / 1</mark>
AT#ECAM[= [ <onoff>]]</onoff>	This command enables/disables the call monitoring function	in the <b>ME</b> .
	Parameter:	
	<onoff></onoff>	
	0 - disables call monitoring function (factory default)	
	1 - enables call monitoring function; the <b>ME</b> informs about incoming call, connected, hang up etc. using the for indication:	
	#ECAM: <ccid>,<ccstatus>,<calltype>,,, [<number>,</number></calltype></ccstatus></ccid>	<type>]</type>
	where	
	<ccid> - call ID</ccid>	
	<ccstatus> - call status</ccstatus>	
	0 - idle	
	1 - calling (MO)	
	2 - connecting (MO) 3 - active	
	4 - hold	
	5 - waiting (MT)	
	6 - alerting (MT)	
	7 - busy	
	<calltype> - call type</calltype>	
	1 - voice	
	2 - data	
	<number> - called number (valid only for <ccstatus>=1</ccstatus></number>	.)
	<type> - type of <number></number></type>	
	129 - national number	
	145 - international number	
	Note: the unsolicited indication is sent along with usua <b>CARRIER</b> , <b>BUSY</b> ).	al codes (OK, NO
	Note: issuing <b>AT#ECAM<cr></cr></b> is the same as issuing the Ro	ead command.
	Note: issuing <b>AT#ECAM=<cr></cr></b> returns the <b>OK</b> result code	
AT#ECAM?	Read command reports whether the extended call more currently enabled or not, in the format:	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 328 of 717

80000ST10025a Rev. 24 – 2016-09-07

<b>#ECAM - Extended</b>	Call Monitoring SELINT 0 /
	#ECAM: <onoff></onoff>
AT#ECAM=?	Test command returns the list of supported values for <b><onoff></onoff></b>
<b>#ECAM - Extended</b>	
AT#ECAM= [ <onoff>]</onoff>	This command enables/disables the call monitoring function in the ME.         Parameter: <onofl>       0 - disables call monitoring function (factory default)         1 - enables call monitoring function         2 - enables call monitoring function with calling number displa         When enabled, the ME informs about call events, such as incoming ca         connected, hang up etc. using the following unsolicited indication:         #ECAM: <ccid>,<ccstatus>,<calltype>,,,[<number>,<type>]         where         <ccid> - call ID         <ccstatus> - call status         0 - idle         1 - calling (MO)         2 - connecting (MO)         3 - active         4 - hold         5 - waiting (MT)         6 - alerting (MT)         7 - busy         <calltype> - call type         1 - voice         2 - data         <number> - Called number, if <ccstatus>=1; calling number         available, if <ccstatus>=6         <ttype> - type of <unber>         129 - national number         145 - international number         Note: the unsolicited indication is sent along with usual codes (OK, NO</unber></ttype></ccstatus></ccstatus></number></calltype></ccstatus></ccid></type></number></calltype></ccstatus></ccid></onofl>
AT#ECAM?	CARRIER, BUSY). Read command reports whether the extended call monitoring function is currently enabled or not, in the format:
	#ECAM: <onoff></onoff>
AT#ECAM=?	Test command returns the list of supported values for <b><onoff></onoff></b>

AT Commands Reference Guide 80000ST10025a Rev. 24 – 2016-09-07

3.5.7.1.56.	Forward Messa	ge From Storage	- #CMSFW
3.3.7.1.30.	T'UI WAI'U MICSSA	ige From Storage	$= \pi C M S \Gamma W$

<b>#CMSFW – Forward Message</b>	From Storage SELINT 2
	Execution command sends to the network a message that is already stored
<toda>]]</toda>	in the <b><memw></memw></b> or <b><mems></mems></b> storage (see <b>+CPMS</b> ) at the location <b><index></index></b> , or a received message.
	Parameters: <index> - location value in the message storage <memw> of the message to send <da> - destination address, string type represented in the currently selected character set (see +CSCS). <toda> - type of destination address 129 - number in national format 145 - number in international format (contains the "+") If message is successfully sent to the network then the result is sent in the format:</toda></da></memw></index>
	#CMSFW: <mr> where: <mr> - message reference number.</mr></mr>
	If message sending fails for some reason, an error code is reported: +CMS ERROR: <err></err>
	Note: to store a message in the <b><memw></memw></b> storage see command <b>+CMGW</b> .
	Note: parameter <b><da></da></b> is mandatory if the message to forward is a SMS- DELIVER.
	Note: SMS-STATUS-REPORT messages cannot be forwarded.
	Note: care must be taken to ensure that during the command execution, which may take several seconds, no other SIM interacting commands are issued.
AT#CMSFW=?	Test command returns <b>OK</b> result code.
Note	To avoid malfunctions is suggested to wait for the <b># CMSFW: <mr></mr></b> or <b>+CMS ERROR: <err></err></b> response before issuing further commands

#### 3.5.7.1.57. Audio Codec - #CODEC

	<b>#CODEC - Audio Cod</b>	e c	<mark>SELINT 0 / 1</mark>
AT#CODEC[= Set command sets the audio codec mode.	AT#CODEC[=	Set command sets the audio codec mode.

80000ST10025a Rev. 24 - 2016-09-07

<b>#CODEC - Audio Co</b>	<mark>)dec</mark>	SELINT 2
	<ul> <li>4 - HR, half rate mode enabled</li> <li>8 - AMR-FR, AMR full rate mode enabled</li> <li>16 - AMR-HR, AMR half rate mode enabled</li> <li>Note: the full rate mode is added by default to any setting ir (as specified in ETSI 04.08), but the call drops if the network has not been selected by the user.</li> </ul>	
	Note: the setting 0 is equivalent to the setting 31. Note: The codec setting is saved in the profile parameters.	
AT#CODEC?	Read command returns current audio codec mode in the for #CODEC: <codec></codec>	mat:
AT#CODEC=?	Test command returns the range of available values for para	ameter < <b>codec</b> >
Example	AT#CODEC=14 OK sets the codec modes HR (4), EFR (2) and AMR-FR (8)	

#### 3.5.7.1.58. Network Timezone - #NITZ

Fimezone SELINT 0 / 1
Set command enables/disables automatic date/time updating and Network Timezone unsolicited indication.
Date and time information can be sent by the network after GSM registration or after GPRS attach.
Parameters:
<val></val>
0 - disables automatic set (factory default) 1 - enables automatic set
<pre>1 - enables automatic set <mode></mode></pre>
0 - disables unsolicited message (factory default)
1 - enables unsolicited message; after date and time updating the following unsolicited indication is sent:
#NITZ: "yy/MM/dd,hh:mm:ss"
where:
yy - year
<b>MM</b> - month (in digits)
dd - day hh - hour
mm - minute

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 335 of 717

80000ST10025a Rev. 24 – 2016-09-07

<b>#NITZ - Network</b>	Timezone   SELINT 0 / 1
	ss - second
	Note: issuing <b>AT#NITZ<cr></cr></b> is the same as issuing the Read command.
	Note: issuing <b>AT#NITZ=</b> < <b>CR</b> > is the same as issuing the command <b>AT#NITZ=0</b> < <b>CR</b> >.
AT#NITZ?	Read command reports whether automatic date/time updating is currently enabled or not, and whether Network Timezone unsolicited indication is enabled or not, in the format:
	#NITZ: <val>,<mode></mode></val>
AT#NITZ=?	Test command returns supported values of parameters <b><val></val></b> and <b><mode></mode></b> .
<b>#NITZ - Network</b>	
[ <val>Name applying and (c) #NITZ URC; moreo[,<mode>]]URC format.</mode></val>	Date and time information can be sent by the network after GSM registration or
	Parameters: <val> <ul> <li>o - disables (a) automatic data/time updating, (b) Full Network Name applying a (c) #NITZ URC; moreover it sets the #NITZ URC 'basic' format (see</li> <li><datetime> below) (factory default for all products except GE866-QUAD, GE865-QUAD, GE865-QUAD, GE865-DUAL, GL865-QUAD, GE865-DUAL V3, GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS)</datetime></li> <li>1.15 - as a sum of: <ul> <li>1 - enables automatic date/time updating</li> <li>2 - enables Full Network Name applying</li> <li>4 - it sets the #NITZ URC 'extended' format (see <datetime> below)</datetime></li> <li>8 - it sets the #NITZ URC 'extended' format with Daylight Saving Time (DST) support (see <datetime> below)</datetime></li> <li>(default for GE866-QUAD, GE865-DUAL, GE910-QUAD, GE910-QUAD, GE910-QUAD, GE910-QUAD, AUTO, GE910-QUAD V3 and GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS: 7)</li> </ul> </li> <li><mode> <ul> <li>0 - disables #NITZ URC (factory default)</li> <li>1 - enables #NITZ URC; after date and time updating the following unsolicited indication is sent:</li> <li>#NITZ: <datetime></datetime></li> </ul> </mode></li> </ul></val>
	where.
	where:

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 336 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#NITZ - Network</b>	Timezone SELINT 2
	<pre><datetime> - string whose format depends on subparameter <val>     "yy/MM/dd,hh:mm:ss" - 'basic' format, if <val> is in (03)     "yy/MM/dd,hh:mm:ss±zz" - 'extended' format, if <val> is in (47)     "yy/MM/dd,hh:mm:ss±zz,d" - 'extended' format with DST support, if <val>     is in (815)</val></val></val></val></datetime></pre>
	<ul> <li>where:</li> <li>yy - year</li> <li>MM - month (in digits)</li> <li>dd - day</li> <li>hh - hour</li> <li>mm - minute</li> <li>ss - second</li> <li>zz - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory, range is 47+48)</li> <li>d - number of hours added to the local TZ because of Daylight Saving Time (summertime) adjustment; range is 0-3.</li> </ul>
	Note: If the DST information isn't sent by the network, then the <b><datetime></datetime></b> parameter has the format <b>"yy/MM/dd,hh:mm:ss±zz"</b>
AT#NITZ?	Read command reports whether (a) automatic date/time updating, (b) Full Network Name applying, (c) <b>#NITZ</b> URC (as well as its format) are currently enabled or not in the format:
AT#NITZ=?	#NITZ: <val>,<mode>         Test command returns supported values of parameters <val> and <mode>.</mode></val></mode></val>

#### 3.5.7.1.59. Clock management - #CCLK

#CCLK - Clock Mana	l <mark>gement</mark>	SELINT 2
AT#CCLK= <time></time>	Set command sets the real-time clock of the ME.	
	Parameter:	
	<time> - current time as quoted string in the format:</time>	
	"yy/MM/dd,hh:mm:ss±zz,d"	
	yy - year (two last digits are mandatory), range is 0099	
	<b>MM</b> - month (two last digits are mandatory), range is 0112	
	<b>dd</b> - day (two last digits are mandatory)	
	The range for dd(day) depends either on the month and on	the year it refers
	to. Available ranges are:	
	(0128)	
	(0129)	
	(0130)	
	(0131)	
	Trying to enter an out of range value will raise an err	or

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 337 of 717

80000ST10025a Rev. 24 - 2016-09-07

#CCLK - Clock M	anagement SELINT 2
	<ul> <li>hh - hour (two last digits are mandatory), range is 0023</li> <li>mm - minute (two last digits are mandatory), range is 0059</li> <li>ss - seconds (two last digits are mandatory), range is 0059</li> <li>±zz - time zone (indicates the difference, expressed in quarter of an hour, between the local time and GMT; two last digits are mandatory), range is -47+48</li> <li>d – number of hours added to the local TZ because of Daylight Saving Time (summertime) adjustment; range is 0-2.</li> </ul>
AT#CCLK?	Read command returns the current setting of the real-time clock, in the format <b><time></time></b> . Note: if the time is set by the network but the DST information is missing, or the time is set by +CCLK command, then the <b><time></time></b> format is: <b>"yy/MM/dd,hh:mm:ss±zz"</b>
AT#CCLK=? Example	Test command returns the OK result code.           AT#CCLK="02/09/07,22:30:00+04,1"           OK           AT#CCLK?           #CCLK: "02/09/07,22:30:25+04,1"           OK

#### 3.5.7.1.60. **#NTP** – Network Time

#NTP – calculate and update date and time SELINT 2		
AT#NTP=	This command permits to calculate and update date and time through NTP	
<ntpaddr>,</ntpaddr>	protocol(RFC2030), sending a request to a NTP	
<ntpport>,</ntpport>	server.	
<update_module_clock>,</update_module_clock>		
<timeout>[,<timezone>]</timezone></timeout>	Parameters:	
	< <b>NTPaddr&gt; -</b> address of the NTP server, string type. This parameter can be either:	
	<ul> <li>any valid IP address in the format: "xxx.xxx.xxx."</li> <li>any host name to be solved with a DNS query</li> </ul>	
	<ntpport> - NTP server port to contact 165535</ntpport>	
	<update clock="" module=""></update>	
	0 - no update module clock	
	1 – update module clock	
	<timeout> - waiting timeout for server response in seconds 110</timeout>	
	<timezone> - Time Zone (indicates the difference, expressed in quarter</timezone>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 338 of 717

#### **AT Commands Reference Guide** 80000ST10025a Rev. 24 – 2016-09-07

	of an hour, between the local time and GMT), range is -47+48; default is 0. Note: the Time Zone is applied directly in the Date and Time received by the NTP Server, that is, by definition, GMT+0
AT#NTP=?	Test command reports the supported range of values for parameters <ntpaddr>,<ntpport>,<update_module_clock>, <timeout> and <timezone></timezone></timeout></update_module_clock></ntpport></ntpaddr>
Example	at#ntp="ntp1.inrim.it",123,1,2,4 #NTP: 12/01/27,14:42:38+04 OK  at+cclk? +CCLK: "12/01/27,14:42:39+04" OK

#### 3.5.7.1.61. Enhanced Network Selection - #ENS

#ENS - Enhanced Net	work Selection	SELINT 2
{ <mark>ENS - Enhanced Net</mark> AT#ENS=[ <mode>]</mode>	Set command is used to activate the ENS functionality. Parameter: <b><mode></mode></b> 0 - disable ENS functionality (default) 1 - enable ENS functionality; if <b>AT#ENS=1</b> has been issue will be automatically set:	
	<ul> <li>at every next power-up         <ul> <li>a Band GSM 850 and PCS enabled (AT#BND=3)</li> <li>b SIM Application Toolkit enabled on user interface enabled on a different user interface (AT#STIA=</li> <li>just at first next power-up</li></ul></li></ul>	ce 0 if not previously =2) BND=2) only if the
	Note: the new setting will be available just at first next power of the four Band' Automatic Band Selection has been a <b>(AT#AUTOBND=2)</b> , at power-up the value returned by A different from 3 when ENS functionality is enabled. Note: on version 10.0x.xx4 the set command AT#ENS=1.	activated AT#BND? could be
	Application Toolkit if the command AT#ENAUSIM? retu

AT#ENS?	Read command reports whether the ENS functionality is currently enabled or not, in the format: #ENS: <mode></mode>
	where: <mode> as above</mode>
AT#ENS=?	Test command reports the available range of values for parameter <b><mode></mode></b> .
Reference	Cingular Wireless LLC Requirement

#### **3.5.7.1.62.** Select Band - #BND

#BND - Select Band	SELINT 0 / 1
AT#BND[=	Set command selects the current band.
[ <band>]]</band>	
	Parameter
	<band>:</band>
	0 - GSM 900MHz + DCS 1800MHz
	1 - GSM 900MHz + PCS 1900MHz
	2 - GSM 850MHz + DCS 1800MHz (available only on quadri-band modules)
	3 - GSM 850MHz + PCS 1900MHz (available only on quadri-band modules)
	Note: This setting is maintained even after power off.
	Note: issuing <b>AT#BNDCR&gt;</b> is the same as issuing the Read command.
	Note: issuing <b>AT#BND=<cr></cr></b> is the same as issuing the command <b>AT#BND=0<cr></cr></b> .
AT#BND?	Read command returns the current selected band in the format:
	#BND: <band></band>
AT#BND=?	Test command returns the supported range of values of parameter <b><band></band></b> .
	Note: the range of values differs between triband modules and quadric-band modules.
Note:	Not available for Dual-Band products.

<b>#BND - Select Bar</b>	Id SELINT 2	
AT#BND=	Set command selects the current band.	
[ <band>]</band>		
	Parameter	
	<band>:</band>	
	0 - GSM 900MHz + DCS 1800MHz	
	1 - GSM 900MHz + PCS 1900MHz; this value is not available if the ENS	
	functionality has been activated (see <b>#ENS</b> )	
	2 - GSM 850MHz + DCS 1800MHz (available only on quadri-band modules); t	his

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 340 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#BND - Select Band</b>	SELINT 2
	value is not available if the ENS functionality has been activated (see <b>#ENS</b> ) 3 - GSM 850MHz + PCS 1900MHz (available only on quadri-band modules)
	Note: This setting is maintained even after power off.
	Note: if the normal automatic band selection is enabled ( <b>AT#AUTOBND=1</b> ) then the last <b>#BND</b> settings can automatically change at power-up; then you can normally use the command.
	Note: if the 'four bands' automatic band selection is enabled ( <b>AT#AUTOBND=2</b> ) then you can issue <b>AT#BND=<band></band></b> but it will have no functional effect; nevertheless every following read command <b>AT#BND?</b> will report that setting.
AT#BND?	Read command returns the current selected band in the format:
	#BND: <band></band>
AT#BND=?	Test command returns the supported range of values of parameter <b><band></band></b> .
	Note: the range of values differs between tri-band modules and quadri-band modules.
Note:	Not available for Dual-Band products.

#### 3.5.7.1.63. Automatic Band Selection - #AUTOBND

#AUTOBND - Automa	tic Band Selection	SELINT 0 / 1
AT#AUTOBND[=	Set command enables/disables the automatic band selection at po	ower-on.
<value>]</value>		
	Parameter:	
	<value>:</value>	
	<ul> <li>0 - disables automatic band selection at power-on (default for al 1 - enables automatic band selection at power-on; +COPS=0 is condition to effectively have automatic band selection at next automatic band selection stops as soon as a GSM cell is found</li> </ul>	necessary t power-on; the
	Note: if automatic band selection is enabled the band changes ev seconds through available bands until a GSM cell is found.	ery about 90
	Note: if parameter <b><value></value></b> is omitted the behaviour of Set comm Read command.	nand is the same as
AT#AUTOBND?	Read command returns whether the automatic band selection is e the format: #AUTOBND: <value></value>	nabled or not in
AT#AUTOBND=?	Test command returns the range of supported values for parameter	er <value></value>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 341 of 717

80000ST10025a Rev. 24 - 2016-09-07

#AUTOBND - Automa	atic Band Selection SELINT 2
AT#AUTOBND=	Set command enables/disables the automatic band selection at power-on.
[ <value>]</value>	1
	Parameter:
	<value>:</value>
	0 - disables automatic band selection at <i>next</i> power-up (default for all products,
	except GE865-QUAD, GL865-QUAD, GE910-QUAD, GE910-QUAD AUTO,
	GE910-QUAD V3, GL865-QUAD-V3 and GE910-GNSS)
	1 - enables automatic band selection at <i>next</i> power-up; the automatic band
	selection stops as soon as a GSM cell is found (deprecated).
	2 –enables automatic band selection in four bands (at 850/1900 and 900/1800);
	differently from previous settings it takes <i>immediate</i> effect (default for GE865-
	QUAD, GL865-QUAD, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3, GL865-QUAD-V3 and GE910-GNSS)
	v 5, GE805-QOAD- v 5 and GE910-GN35)
	Note: necessary condition to <i>effectively</i> have automatic band selection at next
	power-up (due to either AT#AUTOBND=1 or AT#AUTOBND=2) is that
	AT+COPS=0 has to be previously issued
	Note: if automatic band selection is enabled (AT#AUTOBND=1) the band changes
	every about 90 seconds through available bands until a GSM cell is found.
	Note: if the current setting is equal to <b>AT#AUTOBND=0</b> and we're issuing
	AT#ENS=1, at <i>first next</i> power-up after the ENS functionality has been activated
	(see #ENS) the automatic band selection (AT#AUTOBND=2) is enabled.
AT#AUTOBND?	Read command returns whether the automatic band selection is enabled or not in
AI#AUIUDND:	the form:
	#AUTOBND: <value></value>
AT#AUTOBND=?	Test command returns the range of supported values for parameter <b><value></value></b> .

### 3.5.7.1.64. Lock to single band - #BNDLOCK

#BNDLOCK – Lock to single band SELINT 2	
AT#BNDLOCK= <lockedban< th=""><th>This command allows to set the single band the device must be locked to,</th></lockedban<>	This command allows to set the single band the device must be locked to,
d>	selectable within those allowed for the specific product.
	Parameters:
	<lockedband>:</lockedband>
	0 - disables band locking (factory default);
	1 - enables band locking on GSM 900MHz;
	2 - enables band locking on DCS 1800MHz;
	3 - enables band locking on GSM 850MHz;
	4 - enables band locking on PCS 1900MHz.
	Note: the value set by command is directly stored in NVM and doesn't

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 342 of 717

80000ST10025a Rev. 24 - 2016-09-07

	· · · · · · · · · · · · · · · · · · ·
	depend on the specific CMUX instance.
	<ul> <li>Note: the new setting takes effect after a new registration procedure to the network.</li> <li>For this reason it is strongly recommended a power cycle (power-off and power-on the device) after new setting.</li> <li>Another possibility is to keep the device on and to force a new registration to the network as in the following example:</li> <li>set AT+COPS=1,2,00001 (manual registration to not existing real network)</li> <li>wait for +CREG: 0,3</li> <li>set AT+COPS=0,0 (for automatic registration) or set AT+COPS=1,0, (for manual registration)</li> <li>Note: in case of a four bands device with current setting AT#AUTOBND=0 there might be conflicts between AT#BND and AT#BNDLOCK stored values. It is user responsibility to set proper values avoiding conflicts (no cross check is available between the two commands).</li> </ul>
AT#BNDLOCK?	Read command reports the currently stored parameter <b><lockedband></lockedband></b> in the format: #BNDLOCK: <b><lockedband></lockedband></b>
AT#BNDLOCK=?	Test command reports the supported range of values for parameter <b>LockedBand&gt;</b> according to specific product.

### 3.5.7.1.65. Lock to single BCCH ARFCN – #BCCHLOCK

#BCCHLOCK – Lock to single BCCH ARFCN SELINT 2	
AT#BCCHLOCK= <lockedbc< th=""><th>This command allows to set the single BCCH ARFCN the device must be</th></lockedbc<>	This command allows to set the single BCCH ARFCN the device must be
ch>	locked to, selectable within those allowed for the specific product.
	Parameters:
	<lockedbcch>:</lockedbcch>
	1024 - disables BCCH locking (factory default);
	0-124, 975-1023 - enables BCCH locking on GSM 900MHz;
	512-885 - enables BCCH locking on DCS 1800MHz;
	128-251 - enables BCCH locking on GSM 850MHz;
	512-810 - enables BCCH locking on PCS 1900MHz.
	Note: the value set by command is directly stored in NVM and doesn't
	depend on the specific CMUX instance.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 343 of 717

80000ST10025a Rev. 24 - 2016-09-07

	Note: if selected locked BCCH is not available, the module will be out of GSM/GPRS network service even for emergency calls and will not select an alternative BCCH.
	Note: if selected locked BCCH is available but the module is not allowed to register to the corresponding PLMN, the module will be able to perform only emergency calls and will not select an alternative BCCH.
	Note: if selected locked BCCH is available, the module, in idle and in GPRS data transfer, will not perform reselection to another cell.
	Note: if selected locked BCCH is available, the module, in GSM data transfer (voice call, data call, sms), will not perform handover to another cell.
	Note: in case of a four bands device with current setting AT#AUTOBND=0 there might be conflicts between AT#BND, AT#BNDLOCK and AT#BCCHLOCK stored values; in case of a two bands device there might be conflicts between AT#BNDLOCK and AT#BCCHLOCK stored values. It is user responsibility to set proper values avoiding conflicts (no cross check is available between the commands).
AT#BCCHLOCK?	Read command reports the currently stored parameter <b><lockedbcch></lockedbcch></b> in the format: #BCCHLOCK: <b><lockedbcch></lockedbcch></b>
AT#BCCHLOCK=?	Test command reports the supported range of values for parameter <lockedbcch> according to specific product.</lockedbcch>

#### 3.5.7.1.66. Network Scan Timer - #NWSCANTMR

#NWSCANTMR - Net	work Scan Timer SELINT 2
AT#NWSCANTMR= <tmr></tmr>	Set command sets the Network Scan Timer that is used by the module to schedule the next network search when it is without network coverage (no signal).
	Parameter: <tmr> - timer value in units of seconds 5 3600 - time in seconds (default 5 secs.)</tmr>
AT#NWSCANTMR	Execution command reports time, in seconds, when the next scan activity will be executed. The format is: #NWSCANTMREXP: <time></time>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 344 of 717

80000ST10025a Rev. 24 - 2016-09-07

	Note: if <b><time></time></b> is zero it means that the timer is not running	
AT#NWSCANTMR?	Read command reports the current parameter setting for <b>#NWSCANTMR</b> command in the format:	
	#NWSCANTMR: <tmr></tmr>	
AT#NWSCANTMR=?	Test command reports the supported range of values for parameter <b><tmr></tmr></b>	
Note	How much time it takes to execute the network scan depends either on how much	
	bands have been selected and on network configuration (mean value is 5 seconds)	

#### 3.5.7.1.67. Enable Network Friendly Mode - #NFM

#NFM – Enable Network Friend		<mark>SELINT 2</mark>
AT#NFM=[ <nfmenable>[,<s< th=""><th>This command enables/disables Network Frie</th><th>endly Mode and Start Time.</th></s<></nfmenable>	This command enables/disables Network Frie	endly Mode and Start Time.
TEnable>]]		
	Parameters:	
	<nfmenable></nfmenable>	
	0 – disable Network Friendly Mode (factory	v default);
	1 – enable Network Friendly Mode.	
	<stenable></stenable>	
	0 – disable Start Time (factory default);	
	1 – enable Start Time.	
	Note: the values set by command are directly	stored in NVM and don't
	depend on the specific CMUX instance.	
	Network Friendly Mode.	
	NFM applies only if enabled ( <nfmenable< td=""><td>&gt; is 1).</td></nfmenable<>	> is 1).
	NFM applies to the following services:	
	1. GSM registration (Location Updating);	
	2. GPRS registration (Attach, Routing Are	ea Updating);
	3. PDP context activation;	
	4. SMS mobile originated.	
	If NFM is not active for a service the corresp When NFM is activated for a service the corr	
	increased up to a maximum value of 7.	
	The values of each NFM service iteration cour case they need to be applied at next power cy	
	<u>GSM registration.</u>	
	If GSM registration (Location Updating) is re one of the following causes	ejected by the Network with
	2: IMSI unknown in HLR	
	3: Illegal MS	
	6: Illegal ME	
	NFM will be activated for GSM registration s	service, current GSM service
	iteration counter will be increased and will ta	
	next power cycle the NFM timer for GSM rea	
	started and a GSM registration will be allowed

#### AT Commands Reference Guide 80000ST10025a Rev. 24 – 2016-09-07

If GSM registration (Location Updating) is rejected by the Network with
one of the following causes
5: IMEI not accepted
17: Network failure
22: Congestion
34: Service option temporarily out of order
for the 4 attempts specified by ETSI/3GPP, NFM will be activated for
GSM registration service, current GSM service iteration counter will be
increased, the NFM timer for GSM registration service will be started and
a GSM registration will be allowed only at NFM timer expiry. At next
power cycle the NFM timer for GSM registration service will be started
and a GSM registration will be allowed only at NFM timer expiry.
If NFM is activated for GSM registration service and NFM timer is not
expired ETSI/3GPP T3212 timer will be ignored.
If NFM is activated for GSM registration service and NFM timer is not
expired ETSI/3GPP search for another PLMN will be ignored.
If GSM registration (Location Updating) is accepted by the Network GSM
service iteration counter will be reset.
GPRS registration.
If GPRS registration (Attach, Routing Area Updating) is rejected by the
Network with one of the following causes
3: Illegal MS
6: Illegal ME
7: GPRS services not allowed
8: GPRS services and non-GPRS services not allowed
NFM will be activated for GPRS registration service, current GPRS
service iteration counter will be increased and will take effect at next
power on. At next power cycle the NFM timer for GPRS registration
service will be started and a GPRS registration will be allowed only at
NFM timer expiry.
If GPRS registration (Attach, Routing Area Updating) is rejected by the
Network with one of the following causes
9: MS identity cannot be derived by the network
16: MSC temporarily not reachable
17: Network failure
22: Congestion
for the 5 attempts specified by ETSI/3GPP, NFM will be activated for
GPRS registration service, current GPRS service iteration counter will be
increased, the NFM timer for GPRS registration service will be started and
a GPRS registration will be allowed only at NFM timer expiry. At next
power cycle the NFM timer for GPRS registration service will be started
and a GPRS registration will be allowed only at NFM timer expiry.
If NFM is activated for GPRS registration service and NFM timer is not
expired ETSI/3GPP T3302 timer will be ignored.
If NFM is activated for GPRS registration service and NFM timer is not
expired ETSI/3GPP attempt in NOM1 for GSM registration will be
ignored.

80000ST10025a Rev. 24 - 2016-09-07

 If GPRS registration (Attach, Routing Area Updating) is accepted by the
Network GPRS service iteration counter will be reset.
PDP context activation.
If PDP context activation is rejected by the Network with one of the
following causes
8: Operator Determined Barring
26: insufficient resources
27: missing or unknown APN
28: unknown PDP address or PDP type
29: user authentication failed
30: activation rejected by GGSN
31: activation rejected, unspecified
32: service option not supported
33: requested service option not subscribed
34: service option temporarily out of order
35: NSAPI already used
38: network failure
39: reactivation requested
NFM will be activated for PDP context activation service, current PDP
service iteration counter will be increased, the NFM timer for PDP context
activation service will be started and a PDP context activation will be
allowed only at NFM timer expiry. At next power cycle the NFM timer for
PDP context activation service will be started and a PDP context
activation will be allowed only at NFM timer expiry.
If PDP context activation is accepted by the Network PDP service
iteration counter will be reset.
SMS mobile originated.
If SMS mobile originated is rejected by the Network with one of the
following causes
8: Operator Determined Barring
10: cell barred
21: short message transfer reject
22: destination out of service
28: unidentified subscriber
29: facility reject
30: unknown subscriber
38: network out of order
41: temporary failure
42: congestion
47 resource unavailable
50 requested facility not subscribed
69: requested facility not implemented
81: invalid short message transfer reference value
NFM will be activated for SMS mobile originated service, current SMS
service iteration counter will be increased, the NFM timer for SMS mobile
originated service will be started and a SMS mobile originated will be
allowed only at NFM timer expiry. At next power cycle the NFM timer for

	is preceded by status 0 and followed by status 2 in a short time.
AT#IMCDEN?	Read command returns the current setting in the format:
	#IMCDEN: <mode>,0,0,0,0<cr><lf></lf></cr></mode>
AT#IMCDEN=?	Test command returns the range of supported values.

### 3.5.7.1.71. Skip Escape Sequence - #SKIPESC

<b>#SKIPESC - Skip Esca</b>	pe Sequence SELINT 0 / 1		
AT#SKIPESC[=	Set command enables/disables skipping the escape sequence +++ while		
[ <mode>]]</mode>	transmitting during a data connection.		
	Parameter:		
	<mode></mode>		
	<ul> <li>0 - doesn't skip the escape sequence; its transmission is enabled (factory default).</li> <li>1 - skips the escape sequence; its transmission is not enabled.</li> </ul>		
	Note: in case of an FTP connection, the escape sequence is not transmitted, regardless of the command setting.		
	Note: issuing <b>AT#SKIPESC<cr></cr></b> is the same as issuing the Read command.		
	Note: issuing <b>AT#SKIPESC=<cr></cr></b> is the same as issuing the command <b>AT#SKIPESC=0<cr></cr></b> .		
AT#SKIPESC?	Read command reports whether escape sequence skipping is currently enabled or		
	not, in the format:		
	#SKIPESC: <mode></mode>		
AT#SKIPESC=?	Test command reports supported range of values for parameter <b><mode></mode></b> .		

<b>#SKIPESC - Skip Esca</b>		SELINT 2
AT#SKIPESC=	Set command enables/disables skipping the escape sequence +++	- while
[ <mode>]</mode>	transmitting during a data connection.	
	Parameter: <b>mode</b> > 0 - doesn't skip the escape sequence; its transmission is enabled 1 - skips the escape sequence; its transmission is not enabled. Note: in case of an FTP connection, the escape sequence is not tr	` • ´
AT#SKIPESC?	regardless of the command setting.	rantly anablad ar
AI#ONIPEOU?	Read command reports whether escape sequence skipping is cur not, in the format:	rentry enabled of
	#SKIPESC: <mode></mode>	
AT#SKIPESC=?	Test command reports supported range of values for parameter <	mode>.

#### 3.5.7.1.72. Escape Sequence Guard Time - #E2ESC

<b>#E2ESC - Escape Sequ</b>	ience Guard Time SELINT 0 / 1	
AT#E2ESC[=	Set command sets a guard time in seconds for the escape sequence in GPRS to be	
[ <gt>]]</gt>	considered a valid one (and return to on-line command mode).	
	Parameter:	
	<gt></gt>	
	0 - guard time defined by command S12 (factory default)	
	110 - guard time in seconds	
	Note: if the Escape Sequence Guard Time is set to a value different from zero, it overrides the one set with <b>S12</b> .	
	Note: issuing <b>AT#E2ESC<cr></cr></b> is the same as issuing the Read command.	
	Note: issuing AT#E2ESC= <cr> returns the OK result code.</cr>	
AT#E2ESC?	Read command returns current value of the escape sequence guard time, in	
	format:	
	#E2ESC: <gt></gt>	
AT#E2ESC=?	Test command returns the <b>OK</b> result code.	

<b>#E2ESC - Escape Se</b>	quence Guard Time SELINT 2
AT#E2ESC= [ <gt>]</gt>	Set command sets a guard time in seconds for the escape sequence in GPRS to be considered a valid one (and return to on-line command mode).
	Parameter: <b><gt></gt></b> 0 - guard time defined by command S12 (factory default) 110 - guard time in seconds
	Note: if the Escape Sequence Guard Time is set to a value different from zero, it overrides the one set with <b>S12</b> .
AT#E2ESC?	Read command returns current value of the escape sequence guard time, in the format:
	#E2ESC: <gt></gt>
AT#E2ESC=?	Test command returns the range of supported values for parameter <gt>.</gt>
AT#E2ESC= [ <gt>]</gt>	Set command sets a guard time in seconds for the escape sequence in GPRS to be considered a valid one (and return to on-line command mode).
	Parameter: <b><gt></gt></b> 0 - guard time defined by command S12 (factory default)

80000ST10025a Rev. 24 - 2016-09-07

<b>#E2ESC - Escape Sequence Guard Time</b>	SELINT 2
110 - guard time in seconds	
Note: if the Escape Sequence Guard Time is set to a value diffe overrides the one set with <b>S12</b> .	rent from zero, it

### 3.5.7.1.73. PPP-GPRS Connection Authentication Type - #GAUTH

<mark>#GAUTH - PPP-GPR</mark> S	S Connection Authentication Type	<mark>SELINT 0 / 1</mark>
AT#GAUTH[=	Set command sets the authentication type either for PPP-GPRS and	d PPP-GSM
<type>]</type>	connections.	
	Parameter <type> 0 - no authentication 1 - PAP authentication (factory default) 2 - CHAP authentication Note: if parameter <type> is omitted the behaviour of Set comman</type></type>	nd is the same as
	Read command.	
AT#GAUTH?	Read command reports the current PPP-GPRS connection authenti the format:	cation type, in
	#GAUTH: <type></type>	
AT#GAUTH=?	Test command returns the range of supported values for parameter	<type>.</type>

<mark>#GAUTH - PPP-GPR</mark>	S Connection Authentication Type SELINT 2
AT#GAUTH= [ <type>]</type>	Set command sets the authentication type either for PPP-GPRS and PPP-GSM connections.
	Parameter <type> 0 - no authentication 1 - PAP authentication (factory default) 2 - CHAP authentication 3 - automatic (PAP and CHAP) Note: value is automatically saved in NVM</type>
AT#GAUTH?	Read command reports the current PPP-GPRS connection authentication type, in the format: #GAUTH: <type></type>
AT#GAUTH=?	Test command returns the range of supported values for parameter <b><type></type></b> .

AT Commands Reference Guide 80000ST10025a Rev. 24 – 2016-09-07

3.5.7.1.74.	<b>PPP-GPRS Parameters Configuration - #GPPPCFG</b>
-------------	---

	#GPPPCFG - PPP-GPRS Parameters Configuration SELINT 2	
AT#GPPPCFG=	Set command sets three parameters for a PPP-GPRS connection.	
<hostipaddress></hostipaddress>		
[, <lcptimeout></lcptimeout>	Parameters:	
[, <pppmode>]]</pppmode>	<pre><hostipaddress> - Host IP Address that is assigned to the PPP server side (the</hostipaddress></pre>	
	host application); Sstring type, it can be any valid IP address	
	in the format: xxx.xxx.xxx.xxx.	
	<lcptimeout> - LCP response timeout value in 100ms units</lcptimeout>	
	10600 - hundreds of ms (factory default is 25)	
	<pppmode> - PPP mode (factory default is 2)</pppmode>	
	0 - passive mode the module waits the first message coming from the remote	
	application (e.g. LCP Conf Req) before starting the LCP negotiation	
	1 - active mode, the module starts autonomously the LCP negotiation	
	immediately after the CONNECT message	
	2 - passive mode, the module waits the first message coming from the remote	
	application (e.g. LCP Conf Req) before starting the LCP negotiation;	
	LCP termination is performed by the module	
	3 - active mode, the module starts autonomously the LCP negotiation	
	immediately after the CONNECT message;	
	LCP termination is performed by the module	
	Note: values are automatically saved in NVM	
	Note: if <b><hostipaddress>="000.000.000.000"</hostipaddress></b> (factory default) the <b>Host IP</b>	
	Address assigned to the host application is the previous remote IP Address	
	obtained by the Network.	
AT# GPPPCFG?	Read command reports the current PPP-GPRS connection parameters in the	
	format:	
	#GPPPCFG: <hostipaddress>,<lcptimeout>,<pppmode></pppmode></lcptimeout></hostipaddress>	
AT# GPPPCFG=?	Test command returns the range of supported values for parameter <b><lcptimeout></lcptimeout></b>	
	and <b><pppmode></pppmode></b> , in the format:	
	#GPPPCFG: (10-600),(0-3)	

### 3.5.7.1.75. Enables/disables PPP compression - #GPPPCFGEXT

<mark>#GPPPCFGEXT – ena</mark>	#GPPPCFGEXT – enables/disables PPP compression SELINT 2	
AT#GPPPCFGEXT	Set command enables/disables the use of protocol and address/co	ontrol field
= <comp>[,<unused_< th=""><th>compression in PPP.</th><th></th></unused_<></comp>	compression in PPP.	
A>[, <unused_b>[,<u< th=""><th></th><th></th></u<></unused_b>		
nused_C>[]]	Parameter:	
	< Comp >

80000ST10025a Rev. 24 - 2016-09-07

<mark>#GPPPCFGEXT – ena</mark>	bles/disables PPP compression	SELINT 2
	0 – disables compression	
	1 – enables compression (default)	
	Note: value is automatically saved in NVM	
AT#GPPPCFGEXT?	Read command returns the current configuration parameters val	ue:
	#GPPPCFGEXT: < Comp >,0,0,0 <cr><lf></lf></cr>	
AT#GPPPCFGEXT=	Test command returns the range of supported values for all the p	arameters.
?		

### 3.5.7.1.76. Tune PDP parameters - #EQUPDP

<b>#EQUPDP – tune PDP params</b>	SELINT 2
<b>#EQUPDP – tune PDP params</b> AT#EQUPDP= <delay>, <retries>[,<abort>]</abort></retries></delay>	SELINT 2         This command allows to tune PDP procedure <delay> to set PDP retry timer         5,10,15,20,25,30 sec (30s is the default value)         <retries> - to set number of PDP retries         0-4       (4 is the default value)         <abort> - abort PDP procedure when PPP is closed by the application</abort></retries></delay>
	0,1 (1 is the default value) Note: all params are saved in NVM
AT#EQUPDP?	Read command reports the currently selected <b><delay< b="">&gt;,<b><retries></retries></b> and <b><abort></abort></b> params in the format: #EQUPDP: <b><delay< b="">&gt;,<b><retries></retries></b>,<b><abort></abort></b></delay<></b></delay<></b>
AT#EQUPDP=?	Test command returns the range of supported values for all the parameters: #EQUPDP: (5,10,15,20,25,30),(0-4),(0,1)

#### 3.5.7.1.77. RTC Status - #RTCSTAT

**#RTCSTAT - RTC Status** 

<mark>SELINT 0 / 1</mark>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 356 of 717

80000ST10025a Rev. 24 – 2016-09-07

<mark>#RTCSTAT - RTC St</mark>	atus SELINT 0 / 1
AT#RTCSTAT[=	Set command resets the RTC status flag.
<status>]</status>	
	Parameter:
	<status></status>
	0 - Set RTC Status to <b>RTC HW OK</b>
	Note: the initial value of RTC status flag is <b>RTC HW Error</b> and it doesn't change until a command <b>AT#RTCSTAT=0</b> is issued.
	Note: if a power failure occurs and the buffer battery is down the RTC status flag is set to 1. It doesn't change until command <b>AT#RTCSTAT=0</b> is issued.
	Note: if parameter <b><status></status></b> is omitted the behaviour of Set command is the same as Read command.
AT#RTCSTAT?	Read command reports the current value of RTC status flag, in the format:
	#RTCSTAT: <status></status>
AT#RTCSTAT=?	Test command returns the range of supported values for parameter <b><status></status></b>

<b>#RTCSTAT - RTC St</b>	tatus SELINT 2
AT#RTCSTAT=	Set command resets the RTC status flag.
[ <status>]</status>	
	Parameter:
	<status></status>
	0 - Set RTC Status to <b>RTC HW OK</b>
	Note: the initial value of RTC status flag is <b>RTC HW Error</b> and it doesn't change until a command <b>AT#RTCSTAT=0</b> is issued.
	Note: if a power failure occurs and the buffer battery is down the RTC status flag is set to 1. It doesn't change until command <b>AT#RTCSTAT=0</b> is issued.
AT#RTCSTAT?	Read command reports the current value of RTC status flag, in the format:
	#RTCSTAT: <status></status>
AT#RTCSTAT=?	Test command returns the range of supported values for parameter <b><status></status></b>

#### 3.5.7.1.78. GSM Antenna Detection - #GSMAD

#GSMAD - GSM Antenna Detection SELINT 2	
AT#GSMAD=	Set command sets the behaviour of antenna detection algorithm
<mod>,</mod>	
<pre>(<urcmode>)</urcmode></pre>	Parameters:
, <interval></interval>	<mod></mod>
[, <detgpio></detgpio>	0 - antenna detection algorithm not active
[, <repgpio>]]]]</repgpio>	1 - periodic activation of the antenna detection algorithm; detection is started

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 357 of 717

80000ST10025a Rev. 24 – 2016-09-07

every <b><interval></interval></b> period, using <b><detgpio></detgpio></b> for detection; if the algorithm
detects a change in the antenna status the module is notified by URC
<b>#GSMAD</b> (see format below)
2 - instantaneous activation of the antenna detection algorithm; if the algorithm
detects a change in the antenna status the module is notified by URC
<b>#GSMAD</b> (see format below); this instantaneous activation doesn't affect a
periodic activation eventually started before. This modality is obsolete and is
maintained only for backward compatibility. We suggest to use the modality 3
URC format:
#GSMAD: <presence></presence>
"Oshind", presence
where:
<presence></presence>
0 - antenna connected.
1 - antenna connector short circuited to ground.
-
2 - antenna connector short circuited to power.
3 - antenna not detected (open).
3 - instantaneous activation of the antenna detection algorithm as modality 2 but in
this case the command doesn't return until the algorithm ended. The returned
value is the antenna <pre>command doesn't retain difficult digorithm ended. The retained value is the antenna <pre>command</pre></pre>
varue is the antenna <presence> status just detected. Format.</presence>
AT#GSMAD=3
#GSMAD: <presence></presence>
1
OK
This instantaneous activation doesn't affect a periodic activation eventually
started before, then the output format would be:
AT#GSMAD=3
#GSMAD: <presence></presence>
OK
#GSMAD: <presence> // URC resulting of previous #GSMAD=1</presence>
<ur><li>urcmode&gt; - URC presentation mode. It has meaning and can be set only if</li></ur>
<pre><mod> is 1.</mod></pre>
0 - it disables the presentation of the antenna detection URC
1 - it enables the presentation of the antenna detection URC, whenever the antenna
detection algorithm detects a change in the antenna status; the unsolicited
message is in the format:
#CSMAD: <pre>cpuesepee&gt;</pre>
#GSMAD: <presence></presence>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 358 of 717

**AT Commands Reference Guide** 80000ST10025a Rev. 24 – 2016-09-07

	where: <b><presence></presence></b> is as before
	<interval> - duration in seconds of the interval between two consecutive antenna detection algorithm runs (default is 120). It has meaning and can be set only if <mod> is 1.</mod></interval>
	<detgpio> - defines which GPIO shall be used as input by the Antenna Detection algorithm. For the <detgpio> actual range see Test Command</detgpio></detgpio>
	<repgpio> - defines which GPIO shall be used by the Antenna Detection algorithm to report antenna condition. It has meaning only if <mod> is 1. For the <repgpio> actual range see Test Command.</repgpio></mod></repgpio>
	Note: the URC presentation mode <b><urcmode></urcmode></b> is related to the current AT instance only (see <b>+cmux</b> ); last <b><urcmode></urcmode></b> settings are saved for every instance as extended profile parameters, thus it is possible to restore them either if the multiplexer control channel is released and set up, back and forth.
	Note: GPIO is set to LOW when antenna is connected. Set to HIGH otherwise
AT#GSMAD?	Note: #GSMAD parameters, excluding <urcmode>, are saved in NVM.         Read command returns the current parameter settings for #GSMAD command in the format:         #GSMAD: <mod>,<urcmode>,<interval>,<detgpio>,<repgpio></repgpio></detgpio></interval></urcmode></mod></urcmode>
AT#GSMAD=?	Test command reports the supported range of values for parameters <b><mod></mod></b> , <b><uremode></uremode></b> , <b><interval></interval></b> , <b><detgpio></detgpio></b> and <b><repgpio></repgpio></b> .

#### 3.5.7.1.79. SIM Detection Mode - #SIMDET

<mark>#SIMDET - SIM D</mark>	etection Mode SELINT 2
AT#SIMDET=	Set command specifies the SIM Detection mode
<mode></mode>	Parameter:
	<mode> - SIM Detection mode</mode>
	0 - ignore SIMIN pin and simulate the status 'SIM Not Inserted'
	1 - ignore SIMIN pin and simulate the status 'SIM Inserted' (default for GL865-
	DUAL, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL, GL868-DUAL V3,
	GL865-QUAD and GE866-QUAD)
	2 – automatic SIM detection through SIMIN Pin (default except for GL865-
	DUAL, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL, GL868-DUAL V3,
	GL865-QUAD and GE866-QUAD)
	<b>NOTE:</b> with Sim-On-Chip products <b>#SIMDET</b> allows to switch between internal and external SIM, as described below:

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 359 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#SIMDET - SIM Detection Mode</b>		<mark>SELINT 2</mark>
	<ul> <li>0 – switch to internal SIM</li> <li>1 – switch to external SIM, ignore SIMIN pin and simulate the Inserted'</li> <li>2 – automatic SIM detection through SIMIN Pin and automati SIM in case that external SIM has not been detected (default).</li> </ul>	
AT#SIMDET?	Read command returns the currently selected Sim Detection Me #SIMDET: <mode>,<simin> where: <mode> - SIM Detection mode, as before <simin> - SIMIN pin real status 0 - SIM not inserted 1 - SIM inserted</simin></mode></simin></mode>	ode in the format:
AT#SIMDET=?	Test command reports the supported range of values for parameters	eter <b><mode></mode></b>

#### **3.5.7.1.80.** SIM Enhanced Speed - #ENHSIM

#ENHSIM - SIM Enhanced Speed SELINT 2		
AT#ENHSIM=	Set command activates or deactivates the Sim Enhanced Speed Functionality.	
<mod></mod>		
	Parameter:	
	<mod></mod>	
	0 - Not Active (default for all 7.3.xxx software release)	
	1 - BRF is (F=512 D=8) (default for 10.0x.xxx software release)	
	(For BRF definition refer to ISO-7816-3	
	Note: value <b><mod></mod></b> is saved in NVM and will be used since next module startup or new SIM insertion.	
	Note: module will use the slowest speed between the one programmed and the one supported by the SIM.	
AT#ENHSIM?	Read command returns whether the Sim Enhanced Speed Functionality is currently	
	activated or not, in the format:	
	#ENHSIM: <mod></mod>	
AT#ENHSIM=?	Test command reports the supported range of values for parameter <b><mod></mod></b> .	
Reference	GSM 11.11, ISO-7816-3	
Note	It is strongly suggested to verify which is the maximum speed supported by the	
	final application	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 360 of 717

80000ST10025a Rev. 24 - 2016-09-07

3.5.7.1.81.	Subscriber number - #SNUM
3.5./.1.01.	Subscriber number - #SNUM

<mark>#SNUM –</mark> Subscriber N	Number SELINT 2
<mark>#SNUM –</mark> Subscriber <u>N</u> AT#SNUM= <index>,<number>[,&lt; alpha&gt;]</number></index>	Set command writes the MSISDN information related to the subscriber (own number) in the EFmsisdn SIM file.         Parameter: <index> - record number         The number of record in the EFmsisdn depends on the SIM. If only <index> value is given, then delete the EFmsisdn record in location <index> is deleted.</index></index></index>
	For all SW versions except 13.00.xxx, if the ENS functionality has not been previously enabled (see <u><b>#ENS</b></u> ), <b><index>=1</index></b> is the only value admitted. For 13.00.xxx SW version all records are available, irrespective of ENS functionality setting.
	<number> - string containing the phone number The string could be written between quotes. For all SW versions except 13.00.xxx, if the ENS functionality has been previously enabled (see <u>#ENS</u>) "+" at start only is also admitted (international numbering scheme). For 13.00.xxx SW version "+" at start only is always admitted, irrespective of ENS functionality setting.</number>
	<alpha> - alphanumeric string associated to <number>. Default value is empty string (""), otherwise the used character set should be the one selected with +CSCS. The string could be written between quotes, the number of characters depends on the SIM. If empty string is given (""), the corresponding <alpha> will be an empty string.</alpha></number></alpha>
	Note: the command return ERROR if EFmsisdn file is not present in the SIM or if MSISDN service is not allocated and activated in the SIM Service Table (see 3GPP TS 11.11).
AT#SNUM=?	Test command returns the <b>OK</b> result code

#### 3.5.7.1.82. SIM Answer to Reset - #SIMATR

<mark>#SIMATR –</mark> SIM Ansv	ver To Reset SELINT 2
AT#SIMATR	This command returns the characters collected from the Reset/ATR procedure.
	Note: The ATR is the information presented by the SIM to the ME at the beginning of the card session and gives operational requirements (ISO/IEC 7816-3).

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 361 of 717

# 3.5.7.1.83. CPU Clock Mode - #CPUMODE

<b>#CPUMODE - CPU (</b>	Clock Mode SELINT 2
AT#CPUMODE=	Set command specifies the CPU clock mode
<mode></mode>	
	Parameter:
	<mode></mode>
	0 - normal CPU clock @26Mhz
	1 - CPU clock @52Mhz
	2 - CPU clock @52Mhz, during GPRS TX/RX only
	3 - CPU clock @104Mhz
	4 - CPU clock @104Mhz, during GPRS TX/RX only
	5 - CPU clock @52Mhz, during GPRS TX/RX and voice call
	6 - CPU clock @104Mhz, during GPRS TX/RX and voice call
	7 - CPU clock MAX supported, during RSA AT command
	Note: using <b><mode></mode></b> greater than 0, the power consumption will increase
AT#CPUMODE?	Read command returns the currently selected CPU clock mode in the format:
	#CPUMODE: <mode></mode>
AT#CPUMODE=?	Test command reports the supported range of values for parameter <b><mode></mode></b> .

### 3.5.7.1.84. GSM Context Definition - #GSMCONT

<b>#GSMCONT - GSM C</b>	ontext Definition SELINT 2
AT#GSMCONT=	Set command specifies context parameter values for the only GSM context,
<cid>[,<p_type>,</p_type></cid>	identified by the (local) context identification parameter 0.
<csd_num>]</csd_num>	
	Parameters:
	<cid> - context Identifier; numeric parameter which specifies the only GSM</cid>
	context
	0
	< <b>P_type&gt;</b> - protocol type; a string parameter which specifies the type of protocol "IP" - Internet Protocol
	<csd_num> - phone number of the internet service provider</csd_num>
	Note: issuing <b>#GSMCONT=0</b> causes the values for context number <b>0</b> to become undefined.
AT#GSMCONT?	Read command returns the current settings for the GSM context, if defined, in the
	format:
	+GSMCONT: <cid>,<p_type>,<csd_num></csd_num></p_type></cid>
AT#GSMCONT=?	Test command returns the supported range of values for all the parameters.

3.5.7.1.85. IPEGSM configurations - #GSMCONTCFG

#CSMCONTCEC IDECSM config	#CSMCONTCEC - IPECSM configurations SEL INT 2	
<b>#GSMCONTCFG - IPEGSM config</b> AT#GSMCONTCFG= <actto>[,<unused_a> [,<unused_b>[,<unused_c>]]]]</unused_c></unused_b></unused_a></actto>	urations         Set command sets the IPEGSM configuration.         Parameters: <actto> - activation timer value         0 - no timer (default)         5065535 - timeout value in hundreds of mill         Note: this timeout starts as soon as the PPP act         to EasyGPRS User Guide). It does not include         CSD call to be established.         Note: the value set by command is directly store</actto>	ivation starts (refer the time for the
AT#GSMCONTCFG? AT#GSMCONTCFG=?	doesn't depend on the specific AT instance.         Read command returns the current configuration value:         #GSMCONTCFG: <actto>,0,0,0<cr><lf>         Test command returns the range of supported value         subparameters.</lf></cr></actto>	on parameters

#### 3.5.7.1.86. Show Address - #CGPADDR

<b>#CGPADDR - Show A</b>	ddress SELINT 2
AT#CGPADDR=	Execution command returns either the IP address for the GSM context (if specified)
[ <cid>[,<cid></cid></cid>	and/or a list of PDP addresses for the specified PDP context identifiers
[,]]]	
	Parameters:
	<cid> - context identifier</cid>
	0 - specifies the GSM context (see +GSMCONT).
	15 - numeric parameter which specifies a particular PDP context definition (see +CGDCONT command).
	Note: if no <b><cid></cid></b> is specified, the addresses for all <b>defined</b> contexts are returned.
	Note: issuing the command with more than 6 parameters raises an error.
	Note: the command returns only one row of information for every specified <b><cid></cid></b> , even if the same <b><cid></cid></b> is present more than once.
	The command returns a row of information for every specified <b><cid></cid></b> whose context has been already defined. No row is returned for a <b><cid></cid></b> whose context has

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 363 of 717

	not been defined yet. Response format is:
	#CGPADDR: <cid>,<address>[<cr><lf></lf></cr></address></cid>
	#CGPADDR: <cid>,<address>[]]</address></cid>
	where:
	<cid> - context identifier, as before</cid>
	<address> - its meaning depends on the value of <cid></cid></address>
	<ul> <li>a) if <cid> is the (only) GSM context identifier (<cid>=0) it is the dynamic address assigned during the GSM context activation.</cid></cid></li> <li>b) if <cid> is a PDP context identifier (<cid> in (15)) it is a string that identifies the terminal in the address space applicable to the PDP. The address may be static or dynamic. For a static address, it will be the one set by the +CGDCONT command when the context was defined. For a dynamic address it will be the one assigned during the last PDP context activation that used the context definition referred to by <cid>.</cid></cid></cid></li> </ul>
AT#CGPADDR=?	Test command returns a list of defined <b><cid></cid></b> s.
	AT#SGACT=0,1
Example	#SGACT: xxx.yyy.zzz.www
	OK AT#CGPADDR=0 #CGPADDR: 0,"xxx.yyy.zzz.www"
	OK AT#CGPADDR=? #CGPADDR: (0)
	ОК

# 3.5.7.1.87. Configure TCP window size - #TCPMAXWIN

#TCPMAXWIN – Configure TCP window size SELINT 2	
AT#TCPMAXWIN=[ <winsize>]</winsize>	This command permits to configure the TCP window size
	Parameters: <winsize> - TCP window size</winsize>
	0 – TCP window size is handled automatically by the module(default)
	1-65535 – TCP window size value
	Note: command has to be set before opening socket connection( <b>#SD,#SL/SA,#FTPOPEN/GET/PUT</b> )

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 364 of 717

80000ST10025a Rev. 24 - 2016-09-07

	to take effect Note: it permits to slow down TCP when application wants to retrieve data slowly(for instance: cmd mode), to avoid early RST from server Note: the value set by command is directly stored in NVM
AT#TCPMAXWIN?	Read command reports the currently selected <b><winsize></winsize></b> in the format: <b>#TCPMAXWIN: <winsize></winsize></b>
AT#TCPMAXWIN=?	Test command reports the supported range of values for parameter <winsize></winsize>

#### 3.5.7.1.88. Call Establishment Lock - #CESTHLCK

<mark>#CESTHLCK – Call e</mark>	stablishment lock SELINT 2
AT#CESTHLCK=	This command can be used to disable call abort before the DCE enters connected
[ <closure_type>]</closure_type>	state.
	<pre>&lt; closure_type &gt;: 0 - Aborting the call setup by reception of a character is generally possible at any time before the DCE enters connected state (default) 1 - Aborting the call setup is disabled until the DCE enters connected state</pre>
AT#CESTHLCK?	Read command returns the current setting of <b><closure_type></closure_type></b> parameter in the format: #CESTHLCK: <b><closure_type></closure_type></b>
AT#CESTHLCK=?	Test command returns the supported range of values for the <b><closure_type></closure_type></b> parameter

# 3.5.7.1.89. Phone Activity Status - #CPASMODE

#CPASMODE – AT+CPAS answer mode SELINT 2	
AT#CPASMODE= <mode></mode>	Set command enables/disables a modified AT+CPAS command response when the command is issued before an incoming call starts ringing (RING unsolicited code sent to the TE). If <b><mode></mode></b> is 0, AT+CPAS response will be +CPAS: 4

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 365 of 717

	otherwise the response will be +CPAS: 3 Parameter: <mode> - AT+CPAS response selection 0 - standard AT+CPAS response (factory default) 1 - modified AT+CPAS response.</mode>
	Note: the value set by command is directly stored in NVM and doesn't depend on the specific AT instance
AT#CPASMODE?	Read command reports the currently selected <b><mode></mode></b> in the format: #CPASMODE: <b><mode></mode></b>
AT#CPASMODE=?	Test command reports the supported range of values for parameter <b><mode></mode></b>

# 3.5.7.1.90. ICCID SIM file reading mode - #FASTCCID

<b>#FASTCCID – Set IC</b>	CID SIM file reading mode SELI	INT 2	
AT#FASTCCID=	The set command is used to specify the ICCID reading mode.		
[ <fast>]</fast>			
	<fast>: a numeric parameter which indicates the reading mode</fast>		
	0 – the ICCID value is read from the SIM card each time the AT#CCID c is issued and not during SIM card initialization	ommand	
	(default for all products, except for GE910-QUAD, GE910-QUAD AUT GE910-GNSS)	O and	
	1 - the ICCID value is read from the SIM card during SIM card initializat	tion	
	(default for GE910-QUAD, GE910-QUAD AUTO and GE910-GNSS)		
	Note: the value is saved in NVM and has effect only at the next power cycle	cle.	
AT#FASTCCID?	The read command returns the currently selected reading mode in the form	n:	
	#FASTCCID: <fast></fast>		
AT#FASTCCID=?	Test command reports the supported list of currently available <fast>s.</fast>		

### 3.5.7.1.91. Write to I2C - #I2CWR

<b>#I2CWR – Write to I2</b>	C SELINT 2
AT#I2CWR=	This command is used to Send Data to an I2C peripheral connected to module
<sdapin>,</sdapin>	GPIOs
<sclpin>,</sclpin>	
<deviceid>,</deviceid>	<pre><sdapin>: GPIO number for SDA . Valid range is "any input/output pin" (see Tes</sdapin></pre>
<registerid>,</registerid>	Command.)

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 366 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#I2CWR – Write to I2</b>	C SELINT 2
<len></len>	<sclpin>: GPIO number to be used for SCL. Valid range is "any output pin" (see Test Command).</sclpin>
	<deviceid>: address of the I2C device, with the LSB, used for read\write command. It doesn't matter if the LSB is set to 0 or to 1. 10 bit addressing supported. Value has to be written in hexadecimal form (without 0x).</deviceid>
	<registerid>: Register to write data to , range 0255. Value has to be written in hexadecimal form (without 0x).</registerid>
	<le>&gt;: number of data to send. Valid range is 1-254.</le>
	The module responds to the command with the prompt '>' and awaits for the data to send. To complete the operation send <b>Ctrl-Z</b> char ( <b>0x1A</b> hex); to exit without writing the message send <b>ESC</b> char ( <b>0x1B</b> hex).
	Data shall be written in Hexadecimal Form.
	If data are successfully sent, then the response is <b>OK</b> .
	If data sending fails for some reason, an error code is reported. Example if CheckAck is set and no Ack signal was received on the I2C bus
	E.g. AT#I2CWR=2,3,20,10,14 > 00112233445566778899AABBCCDD <ctrl-z> OK Set GPIO2 as SDA, GPIO3 as SCL; Device I2C address is 0x20; 0x10 is the address of the first register where to write I2C data; 14 data bytes will be written since register 0x10</ctrl-z>
	NOTE: At the end of the execution GPIO will be restored to the original setting ( check AT#GPIO Command )
	NOTE: device address, register address where to read from\ write to, and date bytes have to be written in hexadecimal form without 0x.
AT#I2CWR=?	Test command reports the supported list of currently available <service>s.</service>

#### 3.5.7.1.92. Read to I2C - #I2CRD

<b>#I2CRD – Read to I2C</b>		SELINT 2
AT#I2CRD=	This command is used to Receive Data from an I2C peripheral	connected to module

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

80000ST10025a Rev. 24 - 2016-09-07

<b>#I2CRD – Read to I2C</b>		SELINT 2
<sdapin>,</sdapin>	GPIOs	·
<sclpin>,</sclpin>		
<deviceid>,</deviceid>	<sdapin>: GPIO number for SDA . Valid range is "any input/o</sdapin>	utput pin" (see Test
<registerid>,</registerid>	Command.)	
<len></len>		
	<b>sclPin&gt;:</b> GPIO number to be used for SCL. Valid range is "any Command Test).	v output pin" (see
	<deviceid>: address of the I2C device, with the LSB, used for a command. It doesn't matter if the LSB is set to 0 or to 1. 10 bit a supported.</deviceid>	
	Value has to be written in hexadecimal form (without 0x before)	).
	<registerid>: Register to read data from, range 0255. Value has to be written in hexadecimal form (without 0x before)</registerid>	).
	<len>: number of data to receive. Valid range is 1-254.</len>	
	Data Read from I2C will be dumped in Hex:	
	E.g. AT#I2CRD=2,3,20,10,12 #I2CRD: 00112233445566778899AABBCC OK	
	NOTE: If data requested are more than data available in the devi ( normally 0x00 or 0xff ) will be dumped.	ice, dummy data
	NOTE: At the end of the execution GPIO will be restored to the ( check AT#GPIO Command )	original setting
	NOTE: device address, register address where to read from\ writ bytes have to be written in hexadecimal form without 0x.	te to, and date
AT#I2CRD=?	Test command reports the supported list of currently available <	service>s.

#### **3.5.7.1.93.** Software level selection - #SWLEVEL

#SWLEVEL - SW Level seld	ection	SELINT 2
AT#SWLEVEL= <level></level>	Set command enables 2 enhanced features:	
	<ol> <li>It permits to get a faster indication of SIN not required (see command #QSS)</li> <li>DTMF duration (see AT+VTS;AT+VTD for values shorter than 300mS.</li> </ol>	
	Parameters:	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 368 of 717

80000ST10025a Rev. 24 - 2016-09-07

	<li><li><level> - SW level</level></li> <li>0 - disable SW level (default for for all products, except GE866-QUAD, GE865-QUAD, GE865-QUAD, GE865-QUAD, GE865-DUAL V3, GL865-DUAL, GE865-QUAD, GE865-QUAD V3, GL868-DUAL, GE910-QUAD, GE910-QUAD AUTO, GE910-QUAD V3 and GE910-GNSS)</li> <li>1 - enable SW level (default for GE866-QUAD, GE865-QUAD, GE864-DUAL V2, GL865-DUAL, GL865-QUAD, GL865-DUAL V3, GL865-QUAD, GE865-QUAD, GE910-QUAD V3, GL868-DUAL V3, GL868-DUAL V3, GL868-DUAL V3, GL868-DUAL, GE910-QUAD, GE910-QUAD V3 and GE910-GNSS)</li> <li>Note1: the value of <level> parameter is directly stored in NVM and doesn't depend on the specific AT instance.</level></li> <li>Note2: please remember that DTMFs are generated at network level, and the real duration can be operator dependant.</li> </li>
AT#SWLEVEL?	Read command reports the currently selected <b><level></level></b> in the format:
	#SWLEVEL: <level></level>
AT#SWLEVEL=?	Test command reports the supported range of values for parameter <level></level>

#### **3.5.7.1.94.** Control Command Flow - #CFLO

<mark>#CFLO – Comma</mark> ı	id Flow Control SELINT 2	
AT#CFLO= <enable></enable>	Set command enables/disables the flow control in command mode. If enabled, current flow control is applied to both data mode and command mode.	
	Parameter: <enable> -</enable>	
	0 – disable flow control in command mode <default value=""> 1 – enable flow control in command mode</default>	
	Note: setting value is saved in the profile	
AT#CFLO?	Read command returns current setting value in the format #CFLO: <enable></enable>	
AT#CFLO=?	Test command returns the range of supported values for parameter <b><enable></enable></b>	

#### 3.5.7.1.95. Report concatenated SMS indexes - #CMGLCONCINDEX

<b>#CMGLCONCINDEX – Repor</b>	rt concatenated SMS indexes	SELINT 2
AT#CMGLCONCINDEX	The command will report a line for each concatenated SMS containing:	
	#CMGLCONCINDEX: N,i,j,k,	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 369 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#CMGLCONCINDEX – Repor</b>	rt concatenated SMS indexes	SELINT 2
	where N is the number of segments that form the whole conca i,j,k are the SMS indexes of each SMS segment, 0 if so received	
	If no concatenated SMS is present on the SIM, only <b>O</b> I be returned.	K result code will
AT#CMGLCONCINDEX=?	Test command returns <b>OK</b> result code.	
Example	at#cmglconcindex	
	#CMGLCONCINDEX: 3,0,2,3	
	#CMGLCONCINDEX: 5,4,5,6,0,8	
	OK	

#### **3.5.7.1.96.** Codec Information - #CODECINFO

<mark>#CODECINFO – Code</mark>	c Information	SELINT 2
AT#CODECINFO[	This command is both a set and an execution command.	•
= <format>[,</format>		
<mode>]]</mode>	Set command enables/disables codec information reports dep	ending on the
	parameter <b><mode></mode></b> , in the specified <b><format></format></b> .	
	Parameters:	
	<format></format>	
	0 – numeric format (default)	
	1 – textual format	
	<mode></mode>	
	0 - disable codec information unsolicited report (default)	
	1 - enable codec information unsolicited report only if the co	odec changes
	2 - enable short codec information unsolicited report only if	
	If <b><mode>=1</mode></b> the unsolicited channel mode information is following format:	s reported in the
	(if <b><format>=0</format></b> )	
	#CODECINFO: <codec_used>,<codec_set></codec_set></codec_used>	
	(if <b><format>=1</format></b> )	
	#CODECINFO: <codec_used>,<codec_set1></codec_set1></codec_used>	
	[, <codec set2="">[[,codec setn]]]</codec>	
	If <b><mode>=2</mode></b> the unsolicited codec information is reported format:	d in the following
	#CODECINFO: <codec_used></codec_used>	

191

page 370 of 717

2

CODECINF(	<b>D – Codec Information</b> SELINT 2
	The reported values are described below.
	Execution command reports codec information in the specified <b><format></format></b> .
	(if <b><format>=0</format></b> )
	#CODECINFO: <codec_used>,<codec_set></codec_set></codec_used>
	(if <b><format>=1</format></b> )
	#CODECINFO: <codec_used>,<codec_set1></codec_set1></codec_used>
	[, <codec_set2>[[,codec_setn]]]</codec_set2>
	The reported values are:
	(if <b><format>=0</format></b> )
	<codec_used> - one of the following channel modes: 0 – no TCH</codec_used>
	1 - full rate speech 1 on TCH
	2 - full rate speech 2 on TCH
	4 - half rate speech 1 on TCH
	8 - full rate speech 3 – AMR on TCH
	16 - half rate speech 3 – AMR on TCH 128 – full data 9.6
	128 - 1011  data  9.6 129 - full data 4.8
	130 - full data  2.4
	131 – half data 4.8
	132 – half data 2.4
	133 – full data 14.4
	<codec_set></codec_set>
	131 - sum of integers each representing a specific codec mode:
	<ol> <li>FR, full rate mode enabled</li> <li>EFR, enhanced full rate mode enabled</li> </ol>
	4 - HR, half rate mode enabled
	8 - FAMR, AMR full rate mode enabled
	16 - HAMR, AMR half rate mode enabled
	(if < <b>format&gt;=1</b> )
	<pre><codec_used> - one of the following channel modes: None – no TCH</codec_used></pre>
	FR - full rate speech 1 on TCH
	EFR - full rate speech 2 on TCH
	HR - half rate speech 1 on TCH
	FAMR - full rate speech 3 – AMR on TCH
	HAMR - half rate speech $3 - AMR$ on TCH
	FD96 - full data 9.6

80000ST10025a Rev. 24 - 2016-09-07

<b>#CODECINFO – Code</b>	c Information	SELINT 2
	FD48 - full data 4.8	
	FD24 - full data 2.4	
	HD48 - half data 4.8	
	HD24 - half data 2.4	
	FD144 - full data 14.4	
	<codec set<i="">n&gt;</codec>	
	FR - full rate mode enabled	
	EFR - enhanced full rate mode enabled	
	HR - half rate mode enabled	
	FAMR - AMR full rate mode enabled	
	HAMR - AMR half rate mode enabled	
	Note: The command refers to codec information in speech call mode in data/fax call.	and to channel
	Note: if AT#CODEC is 0, the reported codec set for <b><format< b="">&gt; codec).</format<></b>	=0 is 31 (all
AT#CODECINFO?	Read command reports <b><format></format></b> and <b><mode></mode></b> parameter value	es in the format:
	#CODECINFO: <format>,<mode></mode></format>	
AT#CODECINFO=?	Test command returns the range of supported <b><format></format></b> and <b>&lt;</b>	mode>.

# **3.5.7.1.97. Enable trace - +TRACE**

+TRACE – Enable trace	SELINT 2
AT+TRACE= <mode>[,<speed &gt;]</speed </mode>	This command controls the trace; it allows selecting the trace mode, method and the trace data transfer rate
	Parameters: <b>mode</b> : numeric parameter used to switch the trace on or off 0: disables the trace 1: enables the trace
	<speed>: numeric parameter indicating the trace data transfer rate which may be: (115200,230400,460800,921600)</speed>
	Note: if <b><mode></mode></b> =1 and <b><speed></speed></b> is omitted, the trace will be run at the last trace data transfer setted.
	Note: for trace data transfer rate upper than 115200, <b>AT#CPUMODE</b> =1 or <b>AT#CPUMODE</b> =3 setting is recommended to avoid possible trace stuck.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 372 of 717

80000ST10025a Rev. 24 – 2016-09-07

AT+TRACE?	Read command reports the currently selected parameter values in the format: +TRACE: <mode>,<speed></speed></mode>
AT+TRACE=?	Test command reports the supported range of values for all parameters
Examples	at+trace=0 at+trace=1,230400

#### **3.5.7.1.98.** Second Interface Instance - #SII

<mark>#SII –</mark> Second Interface Instance SELINT	
AT#SII= <inst>[,<rate>[,<form< th=""><th>This command activates one of the three AT instances available, and</th></form<></rate></inst>	This command activates one of the three AT instances available, and
nt>[, <parity>]]]</parity>	assigns it to the ASC1 serial port at a particular speed and format.
	Parameters:
	<inst>:</inst>
	is a number that identifies the instance that will be activated on ASC1. The parameter is mandatory and can be 0, 1 or 2:
	0 - disables the other AT instance and restores the trace service;
	1 - enables instance  1;
	2 - enables instance  2;
	2 – enables instance 2,
	<rate>:</rate>
	Set command specifies the DTE speed at which the device accepts
	commands during command mode operations; it may be used to fix the
	DTE-DCE interface speed. The default value is 115200. It has sense only
	if <b><inst></inst></b> parameter has value either 1 or 2.
	Parameter:
	300
	1200
	2400
	4800
	9600
	19200
	38400
	57600
	115200
	<format>:</format>
	determines the number of bits in the data bits, the presence of a parity bit, and the number of step bits in the start step frame. The default value is
	and the number of stop bits in the start-stop frame. The default value is $2.0 \text{ (NS1)}$ format. It has gauge only if cinsts parameter has value either 1.
	3,0, (N81) format. It has sense only if <b><inst></inst></b> parameter has value either 1
	or 2.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 373 of 717

80000ST10025a Rev. 24 - 2016-09-07

	Parameter:
	1 - 8 Data, 2 Stop
	2 - 8 Data, 1 Parity, 1 Stop
	3 - 8 Data, 1 Stop
	5 - 7 Data, 1 Parity, 1 Stop
	<pre><parity>:</parity></pre>
	determines how the parity bit is generated and checked, if present. It has a meaning only if <b><format></format></b> parameter has value either 2 or 5 and only if <b><inst></inst></b> parameter has value either 1 or 2.
	Parameter:
	0 - Odd
	1 - Even
	Note: the value set by command is directly stored in NVM and doesn't depend on the specific AT instance.
	Note: two sets of <b><rate></rate></b> , <b><format></format></b> and <b><parity></parity></b> parameters values are stored in NVM: one for instance 1 ( <b><inst></inst></b> = 1) and the other for instance 2 ( <b><inst></inst></b> = 2). The <b><rate></rate></b> , <b><format></format></b> and <b><parity></parity></b> parameters values are ignored when <b><inst></inst></b> parameter has value 0.
	Note: ASC1 port doesn't support hardware flow control.
AT#SII?	Read command reports the currently active parameters settings in the format:
	#SII: <inst>[,<rate>,<format>,<parity>]</parity></format></rate></inst>
	Note: the <b><rate></rate></b> , <b><format></format></b> and <b><parity></parity></b> parameters values are showed only if <b><inst></inst></b> parameter has value either 1 or 2.
AT#SII=?	Test command reports the supported range of values for parameter <b><inst></inst></b> , <b><rate></rate></b> , <b><format></format></b> and <b><parity></parity></b>

### 3.5.7.1.99. SIMIN pin configuration - #SIMINCFG

#SIMINCFG – SIMIN pin configuration SELINT 2	
AT#SIMINCFG= <gpio_pin>,<s< th=""><th>This command allows to configure a General Purpose I/O pin as SIM</th></s<></gpio_pin>	This command allows to configure a General Purpose I/O pin as SIM
imin_det_mode>	DETECT input and to set Simin pin status for SIM detection
	Parameters:
	<gpio_pin> - GPIO pin number:</gpio_pin>
	0 – no GPIO pin is selected (default value)
	1 to Max GPIO Pin Number
	<b><simin_det_mode></simin_det_mode></b> - status of Simin pin for sim detection:
	0 – Simin pin to ground means SIM inserted, to Vcc means SIM
	removed, for normal sim holder

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 374 of 717

80000ST10025a Rev. 24 - 2016-09-07

	<ul> <li>1 – Simin pin to ground means SIM removed, to Vcc means SIM inserted, for micro sim holder</li> <li>Note: Max_GPIO_Pin_Number is the highest GPIO pin number available: this value depends on the hardware. (See Test command or Hardware User Guide)</li> <li>Note: first parameter makes sense only with GL865-QUAD, GL865-DUAL, GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GL868-DUAL and GE866-QUAD</li> </ul>
AT#SIMINCFG?	Read command reports the selected GPIO pin in the format: #SIMINCFG: <gpio_pin>,<simin_det_mode></simin_det_mode></gpio_pin>
AT#SIMINCFG=?	Test command reports supported range of values for parameter <gpio_pin> and <simin_det_mode></simin_det_mode></gpio_pin>

# 3.5.7.1.100. System turn-off - #SYSHALT

#SYSHALT – system turn-off	SELINT 0,1,2
AT#SYSHALT[=	The module is turned off. It can be awaken by reset pin, alarm or DTR pin
<gpio_restore>,</gpio_restore>	transition to low.
<dtr_wakeup_en>]</dtr_wakeup_en>	Parameters:
	< GPIO_restore >:
	0 – GPIOs and serial ports pins are left unchanged (default)
	1 – GPIO and serial pins are set in input with pull down
	<dtr_wakeup_en>:</dtr_wakeup_en>
	0 – DTR has no effect on module turned off by SYSHALT (default)
	1 – DTR transition from high to low turns on again the module turned off
	by SYSHALT command
AT#SYSHALT?	Read command reports the default state of the parameters
	<gpio_restore> and <dtr_wakeup_en> in the format:</dtr_wakeup_en></gpio_restore>
	#SYSHALT: 0,0
AT#SYSHALT=?	Test command reports supported range of values for all parameters.

### 3.5.7.1.101. Enable USIM application - #ENAUSIM

<b>#ENAUSIM –</b> Enable USIM application SELINT	
AT#ENAUSIM= <enable></enable>	This command enables/disables the USIM application
	Parameters:
	<enable>:</enable>
	0: USIM application Disabled
	1: USIM application Enabled, SIM Application Toolkit disable
	2: USIM application Enabled, SIM Application Toolkit enabled

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 375 of 717

	Note: the value set by command is directly stored in NVM and available on following reboot. USIM application activation/deactivation is only performed at power on. Each time <b><enable></enable></b> value is changed a power cycle is needed Note: when the USIM application is enabled with <b>&lt;</b> enable> equal to 1, SIM Application Toolkit will be automatically disabled and cannot be activated. In particular, the request of SAT activation (see <b>#STIA</b> ) will return ERROR and entering <b>AT#ENS = 1</b> doesn't activate SAT. Note: when USIM application is enabled with <b>&lt;</b> enable> equal to 3, if USIM reading fails the module automatically switch to <b>&lt;</b> enable> equal to 0 and try to read the card with USIM application disabled. Read command returns 0 but value is not stored in NVM, i.e. on following reboot <b>&lt;</b> enable> value will be equal to 3.
AT#ENAUSIM?	Read command reports the currently selected <b><enable></enable></b> in the format: #ENAUSIM: <b><enable></enable></b>
AT#ENAUSIM=?	Test command reports the supported range of values for parameter <b><enable></enable></b>

### 3.5.7.1.102. Select language - #LANG

<b>#LANG – select language</b>	SELINT 2
AT#LANG= <lan></lan>	Set command selects the currently used language for displaying different messages
	Parameter: <lan> - selected language "en" – English (factory default)</lan>
	"it" – Italian
AT#LANG?	Read command reports the currently selected <lan> in the format: #LANG: <lan></lan></lan>
AT#LANG=?	Test command reports the supported range of values for parameter <b><lan></lan></b>

# 3.5.7.1.103. Call forwarding Flags - #CFF

<b>#CFF – Call Forwarding</b>	g Flags	<mark>SELINT 2</mark>
AT#CFF= <enable></enable>	Set command enables/disables the presentation of the SIM call	forwarding flags
	URC.	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 376 of 717

<mark>#CFF – Call Forwar</mark>	ding Flags SELINT 2
	Parameter: <enable> 0 - disable the presentation of the #CFF URC 1 - enable the presentation of the #CFF URC each time the Call Forwarding Unconditional (CFU) SS setting is changed or checked and, at startup, the presentation of the status of the call forwarding flags, as they are currently stored on SIM.</enable>
	The URC format is: #CFF: <status>,<fwdtonum></fwdtonum></status>
	where: <status> 0 – CFU disabled 1 – CFU enabled</status>
	< <b>fwdtonum</b> > - number incoming calls are forwarded to
	The presentation at start up of the <b>call forwarding flags</b> status, as they are currently stored on SIM, is as follows:
	#CFF: <status>,&lt; fwdtonum &gt;</status>
	where: <status> 0 – CFU disabled 1 – CFU enabled &lt; fwdtonum &gt; - number incoming calls are forwarded to</status>
AT#CFF?	Read command reports whether the presentation of the <b>call forwarding flags</b> URC is currently enabled or not, and, if the flags field is present in the SIM, the current status of the <b>call forwarding flags</b> as they are currently stored on SIM, and the number incoming calls are forwarded to. The format is: #CFF: <enable>[,<status>,&lt; fwdtonum &gt;]</status></enable>
AT#CFF=?	Test command returns the range of available values for parameter <b><enable></enable></b> .

#### Hang up call - #CHUP 3.5.7.1.104.

#CHUP - Hang Up Ca		SELINT 2
AT#CHUP	Execution command ends all active and held calls, also if a mul	ti-party session is

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

page 377 of 717

80000ST10025a Rev. 24 – 2016-09-07

<b>#CHUP - Hang Up Ca</b>		SELINT 2
	running. It also allows disconnecting of a data call from a CMU different from the one that was used to start the data call.	X instance
AT#CHUP=?	Test command returns the <b>OK</b> result code	

#### 3.5.7.1.105. Set Encryption algorithm - #ENCALG

<b>#ENCALG – Set Encryption Al</b>	lgorithm SELINT 2
AT#ENCALG=[ <encgsm>][,</encgsm>	This command enables or disables the GSM and/or GPRS encryption
<encgprs>]</encgprs>	algorithms supported by the module.
	Parameters:
	<encgsm>:</encgsm>
	0 – no GSM encryption algorithm
	15 - sum of integers each representing a specific GSM encryption
	algorithm: $1 - A5/1$
	$4 - \frac{A5}{3}$
	255 - reset the default values
	<encgprs>:</encgprs>
	0 – no GPRS encryption algorithm
	17 - sum of integers each representing a specific GPRS encryption
	algorithm:
	1 - GEA1
	2 - GEA2
	4 – GEA3 (supported only for 13.00.xxx SW version, starting from 13.00.xx6)
	255 - reset the default values
	Note: the values are stored in NVM and available on following reboot.
	Note: If no parameter is issued, the set command returns ERROR.
AT#ENCALG?	Read command reports the currently selected <b><encgsm></encgsm></b> and
	<encgprs>, and the last used <usegsm> and <usegprs> in the</usegprs></usegsm></encgprs>
	format:
	#ENCALG: <encgsm>,<encgprs>,<usedgsm>,<usedgprs></usedgprs></usedgsm></encgprs></encgsm>
	Parameters:
	<usedgsm>:</usedgsm>
	0 – no GSM encryption algorithm
	1 - A5/1
	4 - A5/3
	<usedgprs>:</usedgprs>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 378 of 717

80000ST10025a Rev. 24 - 2016-09-07

AT#ENCALG=?	0 – no GPRS encryption algorithm 1 – GEA1 2 – GEA2 4 – GEA3 (supported only for 13.00.xxx SW version, starting from 13.00.xx6) Test command reports the supported range of values for parameters in the
	format: < encGSM > and <encgprs>.</encgprs>
Example	AT#ENCALG? #ENCALG: 5,2,1,1
	ОК
	AT#ENCALG=5,1 OK
	sets the GSM encryption algorithm A5/1 and A5/3, and the GPRS encryption algorithm GEA1. It will be available at the next reboot.
	AT#ENCALG? #ENCALG: 5,2,1,1
	The last two values indicate that the last used GSM encryption algorithm is A5/1 and the last used GPRS encryption algorithm is GEA1
	After reboot
	AT#ENCALG? #ENCALG: 5,1,1,1

#### 3.5.7.1.106. RS485 enable/disable and configure - #RS485

<mark>#RS485 – RS485 enable/disab</mark>	<mark>le and configure</mark>	SELINT 2	
AT#RS485= <enable> [,<gpio>]</gpio></enable>	additional configurable GPIO. The GPIO is set	nd enables/disables the half-RS485 standard using an configurable GPIO. The GPIO is set ON when the UART of representation and it is report as seen as transmission is completed	
	module is transmitting and it is reset as soon as transmission is completed Optionally it allows specifying the GPIO to use.		
	Parameters: <b><enable></enable></b> - enable/disable the simulation: 0 - disable half-RS485 1 - enable half-RS485		
	Note: if gpio is omitted, the first available GPI	O will be selected.	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 379 of 717

80000ST10025a Rev. 24 - 2016-09-07

	<pre><gpio> - GPIO pin number: The test command returns the range of usable GPIO; this value depends on the hardware. Note: if <enable>=0, <gpio> has no meaning and can be omitted, otherwise it is mandatory to set this parameter.</gpio></enable></gpio></pre>
	Note: the value set by command is stored in NVM. Note: sending two consecutive enable commands without a disable
	between them will produce an error; the configuration will remain the first.
AT#RS485?	Read command reports the current state and the selected GPIO in the format: #RS485: < enable >,< gpio >
AT#RS485=?	Test command reports the supported range of values for the parameters < enable > and < gpio >

#### 3.5.7.1.107. Read current network status - #RFSTS

#RFSTS – Read	<mark>current network status</mark>	<mark>SELINT 2</mark>
AT#RFSTS	Execution command reads current network status, in the form	nat:
	#RFSTS: <plmn>,<arfcn>,<rssi>,<lac>,<rac>,&lt;</rac></lac></rssi></arfcn></plmn>	
	>, <nom>,<cid>,<imsi>,<netnameasc>,<sd>,<abni< td=""><td> &gt;</td></abni<></sd></netnameasc></imsi></cid></nom>	>
	Where:	
	< <b>PLMN&gt;</b> - Country code and operator code(MCC, MNC)	
	<arfcn> - GSM Assigned Radio Channel</arfcn>	
	<rssi> - Received Signal Strength Indication</rssi>	
	<lac> - Localization Area Code</lac>	
	<rac> - Routing Area Code</rac>	
	<txpwr> - Tx Power</txpwr>	
	<mm> - Mobility Management State (NOT AVAILABLE)</mm>	
	<rr> - Radio Resource State (NOT AVAILABLE) <nom< td=""><td>I&gt; - Network Operator</td></nom<></rr>	I> - Network Operator
	Mode	
	< <b>CID</b> > - Cell ID	
	<imsi> - International Mobile Subscriber Identity</imsi>	
	<netnameasc> - Operator name</netnameasc>	
	<sd> - Service Domain</sd>	
	0 - No Service	
	1 - CS only	
	2 - PS only 3 - CS+PS	
	5 - C5+P5	
	<abnd> - Active Band</abnd>	
	1 - GSM 850	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 380 of 717

80000ST10025a Rev. 24 - 2016-09-07

	2 - GSM 900 3 - DCS 1800 4 - PCS 1900
AT#RFSTS=?	Test command tests for command existence.

#### **3.5.7.1.108.** Set CMUX Mode - #CMUXMODE

<b>#CMUXMODE – CMUX Mode</b>	Set SELINT 2
AT#CMUXMODE= <mode></mode>	Set command specifies the CMUX mode
	Parameter: <mode>:</mode>
	0 - Old break octect format (0x01) and ignore DTR feature is disabled (default)
	1 – New break octect format $(0x03)$ and ignore DTR feature is disabled 4 – Old break octect format $(0x01)$ and ignore DTR feature is enabled 5 – New break octect format $(0x03)$ and ignore DTR feature is enabled
	If the ignore DTR feature is enabled, then the DCE doesn't care the state and the transitions of the DTR line of the DTE. Otherwise a transition of the DTR instructs the DCE to disable the CMUX and switches to the normal command mode.
	Note: a software or hardware reset restores the default value.
AT#CMUXMODE?	Read command reports the currently selected <b><mode></mode></b> in the format: #CMUXMODE: <b><mode></mode></b>
AT#CMUXMODE =?	Test command reports the supported range of values for parameter <b><mode></mode></b>
	Response: #CMUXMODE: (0,1,4,5)

# 3.5.7.1.109. Connect physical ports to Service Access Points - #PORTCFG

<b>#PORTCFG – connect physical ports to Service Access Points</b> SELINT 2		<mark>SELINT 2</mark>
	Set command allows to connect Service Access Points anchorage points) to the external physical ports giving Examples of Service Access Points: AT Parser Instance TT(Telit Trace).	a great flexibility.
	Parameter:	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 381 of 717

	<b>Variant&gt;</b> - parameter range: 0, 1, 3, 4, 5, 8, 9 0 - default value 8, 9 – available only for GE910-GNSS Please, refer to "GE-910 Family Ports Arrangements User Guide" document for a detailed explanation of port configurations Note: in order to enable the set port configuration, the module has to be rebooted.
AT#PORTCFG?	Read command reports: <requested> value shows the requested configuration that will be activated on the next power off /on of the module; <active> value shows the actual configuration. #PORTCFG: <requested>,<active></active></requested></active></requested>
AT+PORTCFG=?	Test command reports a brief description of the supported ports arrangement solutions. For each <b><variant></variant></b> parameter value are displayed, on one row, the allowed couples formed by: a physical port and the logically connected internal software Access Point (AT, TT). On each row are reported the couples concerning both configurations: USB cable plugged into USB port or not plugged in. AT, indicated on each command row result, can be AT0, AT1, or AT2.

#### Change and insert file system password - #FILEPWD 3.5.7.1.110.

<b>#FILEPWD – Change and inse</b>	rt file system password SELINT 2
AT#FILEPWD= <mode>,<pw< th=""><th>This command changes and inserts file system password.</th></pw<></mode>	This command changes and inserts file system password.
d>[, <newpwd>]</newpwd>	File system password is always enabled (see notes for factory default empty string ""). If current password is different from the empty string "" and password is not inserted then AT commands that make use of the file system will not work (see notes for insertion and AT response).
	Parameters: < <b>Mode&gt;:</b> 1 – insert file system password; 2 – change file system password. < <b>Pwd&gt;:</b> current password when inserting password, old password when changing password, string type (factory default is the empty string ""). < <b>NewPwd&gt;:</b> new password when changing password, string type (only allowed if < <b>Mode&gt;</b> parameter is 2).

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

page 382 of 717

	Note: maximum password length is 12 characters.
	Note: password is saved in NVM.
	Note: password value doesn't depend on the specific CMUX instance.
	Note: in default configuration current password is equal to the empty string "" and password will be always considered inserted.
	Note: if current password is different from the empty string "", password will be always not inserted at power on. Note: if current password is different from the empty string "", after successful password insertion ( <mode> 1) password will remain inserted until power off. Note: after successful password change (<mode> 2) password will be not inserted.</mode></mode>
	Note: if current password is different from the empty string "" and password is not inserted then AT commands that make use of the file system (SCRIPT, M2M, MMS) will have either ERROR
	or +CME ERROR: 16
	or
	+CME ERROR: incorrect password
	response depending on AT+CMEE setting.
AT#FILEPWD=?	Test command reports the supported range of values for parameters.
Example	First time: change default password AT#FILEPWD=2,"","mynewpwd" OK
	and insert password AT#FILEPWD=1,"mynewpwd" OK
	At next power on: insert password AT#FILEPWD=1,"mynewpwd" OK

# 3.5.7.1.111. NO CARRIER Indication Handling - #NCIH

<mark>#NCIH – NO CA</mark>	<b>RRIER Indication Handling</b>	SELINT 2
AT#NCIH=	Set command enables/disables the NO CARRIE	R indication after an incoming call,
<enable></enable>	party before being answered.	
	Parameter:	
	<enable></enable>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 383 of 717

80000ST10025a Rev. 24 - 2016-09-07

<mark>#NCIH – NO CAI</mark>	RRIER Indication Handling	SELINT 2
	<ul><li>0 - disables NO CARRIER indication (default)</li><li>1 - enables NO CARRIER indication</li></ul>	
AT#NCIH?	Read command reports whether the indication is currentl format:	ly enabled or not, in the
	#NCIH: <enable></enable>	
AT#NCIH=?	Test command reports available values for parameter <er< td=""><td>nable.</td></er<>	nable.

# 3.5.7.1.112. AT Command Delay – #ATDELAY

#ATDELAY – AT Con	imand Delay	<mark>SELINT 2</mark>
AT#ATDELAY= <delay></delay>	Set command sets a delay (in seconds) for the execution of the command.	next AT
	Parameters: <delay> - delay in 100 milliseconds intervals; 0 means no dela</delay>	у
	Note: <b><delay></delay></b> is only applied to first command executed after	#ATDELAY
AT#ATDELAY=?	Test command returns the supported range of values for param <delay></delay>	eter
Example	Delay "at#gpio=1,1,1" execution of 5 seconds: at#gpio=1,0,1;#atdelay=50;#gpio=1,1,1 OK	

#### 3.5.7.1.113. **Power Fix – #PCLFIX**

<b>#PCLFIX – Power Fix</b>	SELINT 2
AT#PCLFIX=[ <pclgsm>[,<pc< th=""><th>Sets the fixed value of PCL (power control level)</th></pc<></pclgsm>	Sets the fixed value of PCL (power control level)
IDCS>[, <pcipcs>]]]</pcipcs>	
	Parameters:
	<pre><pclgsm> - numeric parameter indicating the fixed PCL for GSM band. Range: (5-19, 99); Default: 99</pclgsm></pre>
	<b>clDCS</b> > - numeric parameter indicating the fixed PCL for DCS band. Range: (0-15, 99); Default: 99
	<b>cIPCS</b> > numeric parameter indicating the fixed PCL for PCS band. Range: (0-15, 99); Default: 99

AT#PCLMIN?	Read command returns the current parameter settings for <b>#PCLMIN</b> command for					
	all bands in the format:					
	HDCLMIN, an allCOMS an allCOSS an allCOSS					
	<pre>#PCLMIN: <pclgsm>,<pcldcs>,<pclpcs></pclpcs></pcldcs></pclgsm></pre>					
AT#PCLMIN=?	Test command reports the supported range of parameters values.					

#### **3.5.7.1.115.** Enable Test Mode command in not signalling mode – #TESTMODE

#TESTMODE – Enable Test Mode command in not signalling mode SELINT 2		
AT#TESTMODE= <command/>	The command allows setting module in not signaling mode. The functionality has to be first activated by sending <b>AT#TESTMODE="TM"</b> , which sets the module in Test Mode. Only after this set, <b>AT#TESTMODE</b> can be used with the other allowed CT commands. To exit from Test Mode and go back to Operative Mode, the command <b>AT#TESTMODE ="OM"</b> has to be sent.	
	Parameter: <command/> this string corresponds to a CT command. To be accepted by AT#TESTMODE, the CT command has to belong to the following list of CT commands enabled for this use:	
	<ul> <li>"TM"→ forces the module in Test Mode;</li> <li>"OM"→ forces the module in Operative Mode</li> <li>"TCH"→starts the non-stop module transmission. It enables one Tx Slot</li> <li>"TCH2"→starts the non-stop module transmission. It enables two TX slots</li> <li>"TQ <training_sequence>"→ sets the training sequence; <training_sequence> has the range: 0 ÷ 7</training_sequence></training_sequence></li> <li>"PL <power_lev>"→ sets the Power Control Level for lower and upper bands; power_lev1&gt;"→ sets the Power Control Level for lower and upper bands; power_lev1&gt;"→ sets the Power Control Level for lower and upper bands; power_lev1&gt;"→ sets the Power Control Level for both TX slots; power_lev0 is related to the first slot and power_lev1 to the second one; power_lev0 and power_lev1 has the range: 0 ÷ 19</power_lev></li> <li>"RL" → Read Rx power level</li> <li>"BERON" and "BEROFF" to enable/disable BER with Test SIM card</li> <li>"ESC"→ exits the current non-stop sequence. It must be used to stop TCH/TCH2 transmission</li> </ul>

# 3.5.7.1.116. Select the GSM paging number to skip – #IDLEPAGING

<b>#IDLEPAGING - Selec</b>	ct the GSM paging number to skip
AT#IDLEPAGING	The set command is used to specify how many GSM paging to skip mode
=[ <mode>]</mode>	
	<mode>: a numeric parameter which corresponds to the number of GSM paging will be skip</mode>
	<ul> <li>0 - GSM paging not skip. Every paging will be received (default)</li> <li>1 - One GSM paging will be skip every two paging received (50%)</li> <li>2 - Two GSM paging will be skip every three paging received (33% paging received)</li> <li>3 - Three GSM paging will be skip every four paging received (25%)</li> </ul>
	Note: This feature is useful in power saving mode, because paging skip allow to reduce the module power consumptions.
	Note: values greater than 0 for parameter <b><mode></mode></b> deviate from 3GPP standard.
AT#IDLEPAGING?	The read command returns the currently selected number GSM paging to skip in the form:
	#IDLEPAGING: <mode></mode>
AT#IDLEPAGING =?	Test command reports the supported list of currently available <mode>s.</mode>

# 3.5.7.1.117. Initialize modem serial port with SPI protocol – #SPIOPEN

<b>#SPIOPEN – Initializes modem</b>	serial port with SPI protocol SELINT 2
AT#SPIOPEN= <id>,<speed>,</speed></id>	This command initializes the provided modem serial port for SPI protocol.
<mode></mode>	
	Parameters:
	<id> - supported value is 3</id>
	<speed> - supported speed value:</speed>
	1 for 1 Mhz
	2 for 3 Mhz
	3 for 6 Mhz
	4 for 12 Mhz
	<mode> - CPOL CPH setting:</mode>
	0 Clock signal is active high and data is sampled in rising edge.
	1 Clock signal is active high and data is sampled in falling edge.
	2 Clock signal is active low and data is sampled in rising edge.
	3 Clock signal is active low and data is sampled in falling edge
	Note:
AT#SPIOPEN?	Read command Returns last provided Parameters values (0,0,0 as

# 3.5.7.2. Ring Indicator Commands

#### 3.5.7.2.1. Event Ring Indicator - #E2RI

<b>#E2RI – Event Ring Indicator</b>	SELINT 2
AT#E2RI = <event_mask>,<du ration&gt;</du </event_mask>	Set command enables/disables the Ring Indicator pin response to one or more events. If an event has been enabled, a negative going pulse is generated when event happens. The duration of this pulse is determined by the value of <duration>. Parameters: <event_mask> : 0 – disables all events hexadecimal number representing the list of events: 1 – Power Saving Mode (same as AT#PSMRI=<duration>) 2 – Socket Listen (same as AT#E2SLRI=<duration>) 4 – OTA firmware upgrade (same as AT#OTASETRI=<duration>) 8 – MT SMS has been received (same as AT#E2SMSRI=<duration>) 10 – +CREG will change status 20 – +CGREG will change status 40 – #QSS become 2 (SIM INSERTED and PIN UNLOCKED) 80 – MO SMS has been delivered 100 – Jamming Detection &amp; Reporting (JDR)</duration></duration></duration></duration></event_mask></duration>
AT#E2RI?	The hexadecimal number is actually a bit mask, where each bit, when set/not set, indicates that the corresponding event has been enabled/disabled. <duration> : 501150 - the duration in ms of the pulse generated Note: The values set by the command are stored in the profile extended section and they don't depend on the specific AT instance. Note: Enabling JDR event when the Enhanced Jamming Detection &amp; Reporting feature has been previously enabled (see #JDRE and #JDRENH) Read command reports a line for each event and the duration in ms of the pulse generated, in the format:</duration>
	#E2RI: <event_mask>,<duration></duration></event_mask>
AT#E2RI=?	Test command returns supported values of parameters <event_mask> and <duration></duration></event_mask>

#### 3.5.7.2.2. Socket Listen Ring Indicator - #E2SLRI

#### **#E2SLRI - Socket Listen Ring Indicator**

**SELINT 0 / 1 / 2**

#E2SLRI - Socket Lis	ten Ring Indicator	<mark>SELINT 0 / 1 / 2</mark>
AT#E2SLRI=[ <n>]</n>	Set command enables/disables the Ring Indicator pin response to a Socket Listen connect and, if enabled, the duration of the negative going pulse generated on receipt of connect.	
	<ul> <li>Parameter:</li> <li><n> - RI enabling</n></li> <li>0 - RI disabled for Socket Listen connect (factory default)</li> <li>501150 - RI enabled for Socket Listen connect; a negative goi generated on receipt of connect and <n> is the duration in ms of the second sec</n></li></ul>	
AT#E2SLRI?	Read command reports whether the Ring Indicator pin response t connect is currently enabled or not, in the format: #E2SLRI: <n></n>	
AT#E2SLRI=?	Test command returns the allowed values for parameter <b><status< b="">&gt;</status<></b>	<b>`.</b>

#### 3.5.7.2.3. SMS Ring Indicator - #E2SMSRI

<b>#E2SMSRI - SMS Rin</b> g	g Indicator SELINT 0 / 1
AT#E2SMSRI[=	Set command enables/disables the Ring Indicator pin response to an incoming SMS
[ <n>]]</n>	message. If enabled, a negative going pulse is generated on receipt of an incoming
	SMS message. The duration of this pulse is determined by the value of $\langle n \rangle$ .
	Parameter:
	<n> - RI enabling</n>
	<ul> <li>0 - disables <b>RI</b> pin response for incoming SMS messages (factory default)</li> <li>501150 - enables <b>RI</b> pin response for incoming SMS messages. The value of &lt;<b>n</b>&gt; is the duration in ms of the pulse generated on receipt of an incoming SM.</li> </ul>
	Note: if +CNMI=3,1 command is issued and the module is in a GPRS connection, a 100 ms break signal is sent and a 1 sec. pulse is generated on <b>RI</b> pin, no matter if the <b>RI</b> pin response is either enabled or not.
	Note: issuing <b>AT#E2SMSRI<cr></cr></b> is the same as issuing the Read command.
	Note: issuing <b>AT#E2SMSRI=<cr></cr></b> returns the <b>OK</b> result code.
AT#E2SMSRI?	Read command reports the duration in ms of the pulse generated on receipt of an incoming SM, in the format:
	#E2SMSRI: <n></n>
	Note: as seen before, the value < <b>n&gt;=0</b> means that the <b>RI</b> pin response to an incoming SM is disabled.
AT#E2SMSRI=?	Reports the range of supported values for parameter <b><n></n></b>

#E2SMSRI - SMS Rin	ig Indicator SELINT 2
AT#E2SMSRI=	Set command enables/disables the Ring Indicator pin response to an incoming SMS
[ <n>]</n>	message. If enabled, a negative going pulse is generated on receipt of an incoming
	SMS message. The duration of this pulse is determined by the value of $< n >$ .
	Parameter:
	<n> - RI enabling</n>
	<ul> <li>0 - disables <b>RI</b> pin response for incoming SMS messages (factory default)</li> <li>501150 - enables <b>RI</b> pin response for incoming SMS messages. The value of &lt;<b>n</b>&gt; is the duration in ms of the pulse generated on receipt of an incoming SM.</li> </ul>
	Note: if +CNMI=3,1 command is issued and the module is in a GPRS connection, a 100 ms break signal is sent and a 1 sec. pulse is generated on <b>RI</b> pin, no matter if the <b>RI</b> pin response is either enabled or not.
AT#E2SMSRI?	Read command reports the duration in ms of the pulse generated on receipt of an incoming SM, in the format:
	#E2SMSRI: <n></n>
	Note: as seen before, the value <b><n>=0</n></b> means that the <b>RI</b> pin response to an incoming SM is disabled.
AT#E2SMSRI=?	Reports the range of supported values for parameter <b><n></n></b>

# 3.5.7.2.4. Power saving mode ring - #PSMRI

#PSMRI – Power Saving Mode Ring SELINT 2		
AT#PSMRI=	Set command enables/disables the Ring Indicator pin response to an	
< <u>x</u> >	URC message while modem is in power saving mode. If enabled, a	
	negative going pulse is generated, when URC messag	e for specific event is
	invoked.	-
	The duration of this pulse is determined by the value of	of <x>.</x>
	Parameter:	
	<x> - RI enabling</x>	
	0 - disables <b>RI</b> pin response for URC message(factory	(default)
	50-1150 - enables <b>RI</b> pin response for URC messages	k.
	Note: when RING signal from incoming call/SMS/soc	cket listen is enabled, the
	behaviour for #PSMRI will be ignored.	
	Note: to avoid missing of URC messages while mode	
	flow control has to be enabled in command mode (AT	(#CFLO=1)
	Note: the behavior for #DSMDL is involved, only when	madam is in slaan mada
	Note: the behavior for #PSMRI is invoked, only when	i modelli is ili sleep mode
	(AT+CFUN=5 and DTR Off on Main UART)	
	Note: the value set by command is stored in the profil	e extended section and
	doesn't depend on the specific AT instance	e extended section and

#### 3.5.7.3. AT Run Commands

#### 3.5.7.3.1. Enable SMS Run AT Service - #SMSATRUN

#SMSATRUN – Enable S	SMS AT Run service SELINT 2
AT#SMSATRUN=	Set command enables/disables the SMS AT RUN service.
<mod></mod>	
	Parameter:
	< mod >
	0: Service Disabled
	1: Service Enabled
	Note1: When the service is active on a specific AT instance (see AT#SMSATRUNCFG), that instance cannot be used for any other scope, except for OTA service that has the highest priority.
	For example in the multiplexer request to establish the Instance, the request will be rejected.
	Note2: the current settings are stored in NVM.
AT#SMSATRUN?	Read command returns the current settings of <mode> and the value of <stat> in the format:</stat></mode>
	# SMSATRUN: <mod>,<stat></stat></mod>
	where: <stat> - service status 0 - not active 1 - active</stat>
AT#SMSATRUN =?	Test command returns the supported values for the SMSATRUN parameters
Notes:	By default the SMS ATRUN service is disabled
	It can be activated by the command AT#SMSATRUN.

#### 3.5.7.3.2. Set SMS Run AT Service parameters - #SMSATRUNCFG

#SMSATRUNCFG – Set SMS AT Run Parameters			
AT#SMSATRUNCFG=	Set command configures the SMS AT RUN service.		
<instance></instance>			
[, <urcmod></urcmod>	Parameter:		
[, <timeout>]]</timeout>	<instance>:</instance>		
	AT instance that will be used by the service to run the AT Command. Range		
	2-5, default 3.		
	<urcmod>:</urcmod>		
	0 – disable unsolicited message		

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 398 of 717

80000ST10025a Rev. 24 - 2016-09-07

<mark>#SMSATRUNCFG – Set SM</mark>	<b>1S AT Run Parameters</b>	
	1 - enable an unsolicited message when an AT command is requested via SMS (default).	
	When unsolicited is enabled, the AT Command requested via SMS is indicated to TE with unsolicited result code:	
	#SMSATRUN: <text></text>	
	e.g.: #SMSATRUN: AT+CGMR;+CGSN;+GSN;+CCLK	
	Unsolicited is dumped on the instance that requested the service activation.	
	<b><timeout>:</timeout></b> It defines in minutes the maximum time for a command execution. If timeout expires the module will be rebooted. Range $1 - 60$ , default 5.	
	Note 1: the current settings are stored in NVM.	
	Note 2: the instance used for the SMS AT RUN service is the same used for the EvMoni service. Therefore, when the #SMSATRUNCFG sets the <instance> parameter, the change is reflected also in the <instance> parameter of the #ENAEVMONICFG command, and viceversa.</instance></instance>	
	Note 3: the set command returns ERROR if the command AT#ENAEVMONI? returns 1 as <mod> parameter or the command AT#SMSATRUN? returns 1 as <mod> parameter</mod></mod>	
AT#SMSATRUNCFG?	Read command returns the current settings of parameters in the format:	
	#SMSATRUNCFG: <instance>,<urcmod>,<timeout></timeout></urcmod></instance>	
AT#SMSATRUNCFG=?	Test command returns the supported values for the SMSATRUNCFG parameters	

## 3.5.7.3.3. SMS AT Run White List - #SMSATWL

#SMSATWL – SMS AT Run White List		SELINT 2
AT#SMSATWL= <action> ,<index> [,<entrytype> [,<string>]]</string></entrytype></index></action>	Set command to handle the white list. <action>: 0 – Add an element to the WhiteList 1 – Delete an element from the WhiteList 2 – Print and element of the WhiteList</action>	
	< index >: Index of the WhiteList. Range 1-8

80000ST10025a Rev. 24 – 2016-09-07

<mark>#SMSATWL – SMS</mark>	AT Run White List	SELINT 2	
	< entryType >: 0 – Phone Number 1 – Password		
	NOTE: A maximum of two Password Entry can be present at same time white List	e in the	
	<string>: string parameter enclosed between double quotes containing phone number or the password</string>	ed between double quotes containing or the	
	Phone number shall contain numerical characters and/or the character "beginning of the string and/or the character "*" at the end of the string. Password shall be 16 characters length		
	NOTE: When the character "*" is used, it means that all the numbers th with the defined digit are part of the white list.	at begin	
	E.g. "+39*" All Italian users can ask to run AT Command via SMS "+39349*" All vodafone users can ask to run AT Command via SMS	S.	
AT#SMSATWL?	Read command returns the list elements in the format:		
AT#SMSATWL=?	#SMSATWL: [ <entrytype>,<string>]         Test command returns the supported values for the parameter <action>,         and <entrytype></entrytype></action></string></entrytype>	, <index></index>	

#### 3.5.7.3.4. Set TCP Run AT Service parameter - #TCPATRUNCFG

#TCPATRUNCFG – Set TCP AT Run Service Parameters SELINT 2		
AT#TCPATRUNCFG=	Set command configures the TCP AT RUN service Parameters:	
<connid></connid>		
, <instance></instance>	<connid></connid>	
, <tcpport></tcpport>	socket connection identifier. Default 1.	
, <tcphostport></tcphostport>		
, <tcphost></tcphost>	Range 16. This parameter is mandatory.	
[, <urcmod></urcmod>	<instance>:</instance>	
[, <timeout></timeout>	AT instance that will be used by the service to run the AT Command. Default	
[, <authmode></authmode>	2. Range $2-5$ . This parameter is mandatory.	
[, <retrycnt></retrycnt>		
[, <retrydelay>]]]]]</retrydelay>	<tcpport></tcpport>	
	Tcp Listen port for the connection to the service in server mode. Default 1024. Range 165535. This parameter is mandatory.	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 400 of 717

80000ST10025a Rev. 24 – 2016-09-07

ICIMINUTO DU	TCP AT Run Service Parameters	SELINT 2
	<tcphostport></tcphostport>	·
	Tcp remote port of the Host to connect to, in client mo Range 165535. This parameter is mandatory.	ode. Default 1024.
	<tcphost> IP address of the Host, string type.</tcphost>	
	This parameter can be either:	
	- any valid IP address in the format: "xxx.xxx.xxx	XXX"
	- any host name to be solved with a DNS query	
	This parameter is mandatory. Default "".	
	<urcmod>:</urcmod>	
	0 – disable unsolicited messages	
	1 - enable an unsolicited message when the	TCP socket is
	connected or disconnect ( default ).	
	When unsolicited is enabled, an asynchronous TCP Se	ocket connection is
	indicated to TE with unsolicited result code:	
	#TCPATRUN: <iphostaddress></iphostaddress>	
	When unsolicited is enabled, the TCP socket disconne with unsolicited result code:	ection is indicated to TE
	#TCPATRUN: <disconnect></disconnect>	
	Unsolicited is dumped on the instance that requested t	he service activation.
	<timeout>:</timeout>	
	Define in minutes the maximum time for a command	execution. If timeout
	expires the module will be rebooted. The default value	e is 5 minutes. Range
	15.	
	<authmode>:</authmode>	
	determines the authentication procedure in server mod	le:
	0-( default $)$ when connection is up, usernam	
	order and each of them followed by a Carriage Return	
	module before the first AT command.	
	1 – when connection is up, the user receives a	
	and, if username is correct, a request for password. The	en a message of "Login
	successfull" will close authentication phase.	
	Note: if username and/or password are not allowed (see	ee
	· · · ·	e immediately.

80000ST10025a Rev. 24 – 2016-09-07

<b>#TCPATRUNL- Enables</b> T	CCP AT Run Service in listen (server) mode         SELINT 2
AT#TCPATRUNL?	Note3: the current settings are stored in NVM. Note4: to start automatically the service when the module is powered-on, the automatic PDP context activation has to be set (see AT#SGACTCFG command). Read command returns the current settings of <mode> and the value of <stat> in the format: <b>#TCPATRUNL: <mod>,<stat></stat></mod></b> where: <b><stat></stat></b> - connection status 0 - not in listen 1 - in listen or active</stat></mode>
AT#TCPATRUNL =?	Test command returns the supported values for the TCPATRUNL parameters

#### 3.5.7.3.6. TCP AT Run Firewall List - #TCPATRUNFRWL

<mark># TCPATRUNFRWL – TCP A</mark>	T Run Firewall List	<mark>SELINT 2</mark>
AT# <i>TCPATRUNFRWL</i> =	Set command controls the internal firewall settings for the T	CPATRUN
<action>,</action>	connection.	
<ip_addr>,</ip_addr>		
<net_mask></net_mask>	Parameters:	
	<a ction=""> - command action</a>	
	0 - remove selected chain	
	1 - add an ACCEPT chain	
	2 - remove all chains ( <b>DROP</b> everything); <b><ip_addr></ip_addr></b> and has no meaning in this case.	<net_mask></net_mask>
	<pre><ip_addr> - remote address to be added into the ACCEPT type, it can be any valid IP address in the form xxx.xxx.xxx</ip_addr></pre>	
	<net_mask> - mask to be applied on the <ip_addr>; string any valid IP address mask in the format: xxx.</ip_addr></net_mask>	
	Command returns <b>OK</b> result code if successful.	
	Firewall general policy is <b>DROP</b> , therefore all packets that a included into an <b>ACCEPT</b> chain rule will be silently discard	
	When a packet comes from the IP address <b>incoming_IP</b> , the rules will be scanned for matching with the following criteri	
	incoming_IP & <net_mask> = <ip_addr> &amp; <net_mask></net_mask></ip_addr></net_mask>

80000ST10025a Rev. 24 - 2016-09-07

<mark># TCPATRUNFRWL – TCP</mark> A	T Run Firewall List SELINT 2
	If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.
	Note1: A maximum of 5 firewall can be present at same time in the List.
	Note2: the firewall list is saved in NVM
AT# TCPATRUNFRWL?	Read command reports the list of all <b>ACCEPT</b> chain rules registered in the
	Firewall settings in the format:
	#TCPATRUNFRWL: <ip_addr>,<net_mask> #TCPATRUNFRWL: <ip_addr>,<net_mask></net_mask></ip_addr></net_mask></ip_addr>
	 OK
AT#TCPATRUNFRWL=?	Test command returns the allowed values for parameter <b><action>.</action></b>

## 3.5.7.3.7. TCP AT Run Authentication Parameters List - #TCPATRUNAUTH

<mark># TCPATRUNAUTH – TCP AT</mark>	Run Authentication Parameters ListSELINT 2
AT# <i>TCPATRUNAUTH</i> =	Execution command controls the authentication parameters for the
<action>,</action>	TCPATRUN connection.
<userid>,</userid>	
<passw></passw>	Parameters:
-	<action> - command action</action>
	0 - remove selected chain
	1 - add an ACCEPT chain
	2 - remove all chains ( <b>DROP</b> everything); < <b>userid</b> > and < <b>passw</b> > has no meaning in this case.
	<ul> <li>&lt; user to be added into the ACCEPT chain; string type, maximum length 50</li> </ul>
	<pre>&lt; passw &gt; - password of the user on the &lt; userid &gt;; string type, maximum length 50</pre>
	Command returns <b>OK</b> result code if successful.
	Note1: A maximum of 3 entry (password and userid) can be present at same time in the List.
	Note2: the Authentication Parameters List is saved in NVM.
AT# <i>TCPATRUNAUTH</i> ?	Read command reports the list of all ACCEPT chain rules registered in the Authentication settings in the format:
	#TCPATRUNAUTH: <user_id>,<passw></passw></user_id>

# TCPATRUNAUTH – TCP AT Run Authentication Parameters List SELINT 2	
#TCPATRUNAUTH: <user_id>,<passw></passw></user_id>	
	••••
	OK
AT# <i>TCPATRUNAUTH</i> =?	Test command returns the allowed values for parameter <b><action></action></b> .

## 3.5.7.3.8. TCP AT Run in dial (client) mode - #TCPATRUND

<b>#TCPATRUND – Enables TCI</b>	P Run AT Service in dial (client) mode SELINT 2
AT#TCPATRUND= <mod></mod>	Set command enables/disables the
	TCP AT RUN service in client mode. When this service is enabled, the module tries to open a connection to the Host (the Host is specified in
	AT#TCPATRUNCFG).
	Parameter:
	< mod >
	0: Service Disabled
	1: Service Enabled
	Note1: If SMSATRUN is active on the same instance (see
	AT#TCPATRUNCFG) the command will return ERROR.
	Note2: when the service is active it is on a specific AT instance (see
	AT#TCPATRUNCFG), that instance cannot be used for any other scope.
	For example if the multiplexer request to establish the Instance, the request will be rejected.
	Note3: the current setting are stored in NVM
	Note4: to start automatically the service when the module is powered-on,
	the automatic PDP context activation has to be set (see AT#SGACTCFG
	command).
	Note5: if the connection closes or at boot, if service is enabled and context
	is active, the module will try to reconnect for the number of attempts specified in AT#TCPATRUNCFG; also the delay between one attempt
	and the other will be the one specified in AT#TCPATRUNCFG.
AT# TCPATRUND?	Read command returns the current settings of <mode> and the value of</mode>
	<stat> in the format:</stat>
	#TCPATRUND: <mod>,<stat></stat></mod>
	where:
	< <b>stat</b> > - connection status
	0 - not connected
	<ul> <li>1 – connected or connecting at socket level</li> <li>2 - not connected but still trying to connect, attempting every delay</li> </ul>
L

80000ST10025a Rev. 24 - 2016-09-07

<b>#TCPATRUND – Enables TCP Run AT Service in dial (client) mode</b> SELINT 2		
	time (specified in AT#TCPATRUNCFG)	
AT#TCPATRUND =?	Test command returns the supported values for the TCPATRUND	
	parameters	

## 3.5.7.3.9. Closing TCP Run AT Socket - #TCPATRUNCLOSE

<b>#TCPATRUNCLOSE – Closes TCP Run AT Socket</b> SELINT		SELINT 2
AT#TCPATRUNCLOSE	Closes the socket used by TCP ATRUN service.	
	Note: TCP ATRUN status is still enabled after this comma service re-starts automatically.	und, so the
AT#TCPATRUNCLOSE =?	Test command returns OK	

#### **3.5.7.3.10.** TCP AT Run Command Sequence - #TCPATCMDSEQ

<b>#TCPATCMDSEQ – For TC</b> in sequence	<b>CP Run AT Service, allows the user to give AT commands SELINT 2</b>
AT#TCPATCMDSEQ= <mod></mod>	Set command enable/disable, for TCP Run AT service, a feature that allows giving more than one AT command without waiting for responses. It does not work with commands that uses the prompt '>' to receive the message body text (e.g. "at+cmgs", "at#semail") Parameter: < mod > 0: Service Disabled (default) 1: Service Enabled
AT# TCPATCMDSEQ?	Read command returns the current settings of parameters in the format: #TCPATCMDSEQ: <mod></mod>
AT# TCPATCMDSEQ =?	Test command returns the supported values for the TCPATCMDSEQ parameters

### 3.5.7.3.11. TCP Run AT service to a serial port - #TCPATCONSER

<b>#TCPATCONSER – Connects the TCP Run AT service to a serial port SELINT 2</b>		
AT#TCPATCONSER=	Set command sets the TCP Run AT in transparent mode, in o	rder to have
<port>,<rate></rate></port>	direct access to the serial port specified. Data will be transfer	ed directly,
	without being elaborated, between the TCP Run AT service a port specified.	nd the serial
	If the CMUX protocol is running the command will return EF	RROR.
	Parameter:	
	< port >	
	0-1. Serial port to connect to.	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 406 of 717

<b>#TCPATCONSER – Conne</b>	cts the TCP Run AT service to a serial port SELINT 2
	<pre>&lt; rate &gt; baud rate for data transfer. Allowed values are 300,1200,2400,4800,9600,19200,38400,57600,115200. Note1: the command has to be issued from the TCP ATRUN instance Note2: After this command has been issued, if no error has occurred, then a (000) PTCP attent of the second secon</pre>
	"CONNECT" will be returned by the module to advise that the TCP ATRUN instance is in <i>online mode</i> and connected to the port specified. Note3: To exit from online mode and close the connection, the escape sequence (+++) has to be sent on the TCP ATRUN instance
AT# TCPATCONSER =?	Test command returns the supported values for the TCPATCONSER parameters

#### 3.5.7.3.12. Run AT command execution - #ATRUNDELAY

#ATRUNDELAY – Set the delay on Run AT command execution SELINT 2	
AT#ATRUNDELAY=	Set command enables the use of a delay before the execution of AT command
<srv>,<delay></delay></srv>	received by Run AT service (TCP and SMS). It affects just AT commands
	given through Run AT service.
	<srv></srv>
	0 – TCP Run AT service
	1 - SMS Run AT service
	<delay> Value of the delay, in seconds. Range 030.</delay>
	Default value 0 for both services (TCP and SMS).
	Note1 - The use of the delay is recommended to execute some AT commands that require network interaction or switch between GSM and GPRS services. For more details see the RUN AT User Guide.
	Note2: The delay is valid till a new AT#ATRUNDELAY is set.
AT#ATRUNDELAY?	Read command returns the current settings of parameters in the format:
	#ATRUNDELAY: 0, <delaytcp></delaytcp>
	#ATRUNDELAY: 1, <delaysms></delaysms>
	ОК
AT#ATRUNDELAY=?	Test command returns the supported values for the ATRUNDELAY parameters

### 3.5.7.4. Event Monitor Commands

#### **3.5.7.4.1.** Enable EvMoni Service - #ENAEVMONI

<b>#ENAEVMONI – Enable F</b>	EvMoni Service SELINT 2
AT#ENAEVMONI=	Set command enables/disables the EvMoni service.
<mod></mod>	
	Parameter:
	< mod >
	0: Service Disabled (default)
	1: Service Enabled
	Note1: When the service is active on a specific AT instance, that instance cannot be used for any other scope, except for OTA service that has the highest priority. For example in the multiplexer request to establish the Instance, the request will be rejected.
	Note2: the current settings are stored in NVM.
AT#ENAEVMONI?	Read command returns the current settings of <mode> and the value of <stat> in the format:</stat></mode>
	# ENAEVMONI: <mod>,<stat></stat></mod>
	where:
	< <b>stat</b> > - service status
	0 - not active (default)
	1 - active
	I - active
AT#ENAEVMONI =?	Test command returns the supported values for the ENAEVMONI parameters

#### **3.5.7.4.2. EvMoni Service parameter - #ENAEVMONICFG**

<b>#ENAEVMONICFG – Set</b>	EvMoni Service ParametersSELINT 2
AT#ENAEVMONICFG=	Set command configures the EvMoni service.
<instance></instance>	
[, <urcmod></urcmod>	Parameter:
[, <timeout>]]</timeout>	<instance>:</instance>
	AT instance that will be used by the service to run the AT Command. Range 2
	- 5. (Default: 3)
	<urcmod>:</urcmod>
	0 – disable unsolicited message
	1 - enable an unsolicited message when an AT command is executed
	after an event is occurred (default)
	When unsolicited is enabled, the AT Command is indicated to TE with
	unsolicited result code:

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 408 of 717

#FNAFVMONICEC - Set	EvMoni Service Parameters	SELINT 2
$\frac{\pi E (AE + MONIEPO - St)}{St}$		
	#EVMONI: <text></text>	
	e.g.: #EVMONI: AT+CGMR;+CGSN;+GSN;+CCLK	
	Unsolicited is dumped on the instance that requested the service action	tivation.
	<timeout>:</timeout>	
	It defines in minutes the maximum time for a command execution. expires the module will be rebooted. (Default: 5)	If timeout
	Note 1: the current settings are stored in NVM.	
	Note 2: the instance used for the EvMoni service is the same used f AT RUN service. Therefore, when the #ENAEVMONICFG sets th <instance> parameter, the change is reflected also in the <instance> of the #SMSATRUNCFG command, and viceversa.</instance></instance>	e
	Note 3: the set command returns ERROR if the command AT#ENA returns 1 as <mod> parameter or the command AT#SMSATRUN? <mod> parameter</mod></mod>	returns 1 as
AT#ENAEVMONICFG?	Read command returns the current settings of parameters in the for	rmat:
	#ENAEVMONICFG: <instance>,<urcmod>,<timeout></timeout></urcmod></instance>	
AT# ENAEVMONICFG =?	Test command returns the supported values for the ENAEVMONIC parameters	CFG

## 3.5.7.4.3. Event Monitoring - #EVMONI

<b>#EVMONI – Set the si</b>	#EVMONI – Set the single Event Monitoring         SELINT 2		
AT#EVMONI=	Set command enables/disables the single event monitoring, configures the related		
<label>,</label>	parameter and associates the AT command		
<mode>,</mode>			
[, <paramtype></paramtype>	<li>string parameter (that has to be enclosed between double quotes)</li>		
, <param/> ]	indicating the event under monitoring. It can assume the following values:		
	• VBATT - battery voltage monitoring (not yet implemented)		
	• DTR - DTR monitoring (not yet implemented)		
	ROAM - roaming monitoring		
	CONTDEACT - context deactivation monitoring		
	RING - call ringing monitoring		
	• STARTUP – module start-up monitoring		
	REGISTERED – network registration monitoring		
	GPIO1 – monitoring on a selected GPIO in the GPIO range

EVMONI – S	the single Event Monitoring SELINT 2
	mV (therefore 500 corresponds to 5 V). (Default: 0)
	$\circ$ if <b><paramtype></paramtype></b> = 2, <b><param/></b> indicates the time interval in
	seconds after that the voltage battery under the value specified with
	$\langle \mathbf{paramType} \rangle = 1$ causes the event. The range is $0 - 255$ .
	(Default: 0)
	• If <b><label></label></b> is DTR, <b><paramtype></paramtype></b> can assume values in the range 0 - 2.
	• if <paramtype> = 1, <param/> indicates the status high or low</paramtype>
	under monitoring. The values are 0 (low) and 1 (high). (Default: 0)
	$\circ$ if <b><paramtype> = 2</paramtype></b> , <b><param/></b> indicates the time interval in
	seconds after that the DTR in the status specified with
	$\langle \mathbf{paramType} \rangle = 1$ causes the event. The range is $0 - 255$ .
	(Default: 0)
	• If <label> is ROAM, <paramtype> can assume only the value 0. The</paramtype></label>
	event under monitoring is the roaming state.
	• If <b><label></label></b> is CONTDEACT, <b><paramtype></paramtype></b> can assume only the value 0.
	The event under monitoring is the context deactivation.
	• If <b><label></label></b> is RING, <b><paramtype></paramtype></b> can assume values in the range 0 - 1.
	• if <pre>paramType&gt; = 1, <pre> can usualle values in the range of 11</pre></pre>
	after that the event occurs. The range is 1-50. (Default: 1)
	• If <label> is STARTUP, <paramtype> can assume only the value 0. The</paramtype></label>
	event under monitoring is the module start-up.
	• If <b><label></label></b> is REGISTERED, <b><paramtype></paramtype></b> can assume only the value 0.
	The event under monitoring is the network registration (to home network or
	in roaming) after the start-up and the SMS ordening.
	• If <b><label></label></b> is GPIOX, <b><pre>paramType&gt;</pre></b> can assume values in the range 0 - 3.
	supported range is from 1 to a value that depends on the hardware.
	(Default: 1)
	• if <b><paramtype></paramtype></b> = 2, <b><param/></b> indicates the status high or low
	under monitoring. The values are 0 (low) and 1 (high). (Default: 0)
	• if <paramtype> = 3, <param/> indicates the time interval in</paramtype>
	seconds after that the selected GPIO pin in the status specified with
	$\langle \mathbf{paramType} \rangle = 1$ causes the event. The range is $0 - 255$ .
	(Default: 0)
	• If <b><label></label></b> is ADCH1, <b><paramtype></paramtype></b> can assume values in the range 0 - 3.
	• if <b><paramtype></paramtype></b> = 1, <b><param/></b> indicates the ADC pin number;
	supported range is from 1 to a value that depends on the hardware.
	(Default: 1)
	$\circ$ if <b><paramtype></paramtype></b> = 2, <b><param/></b> indicates the ADC High voltage
	threshold in the range $0 - 2000 \text{ mV}$ . (Default: 0)
	• if $\langle \mathbf{paramType} \rangle = 3$ , $\langle \mathbf{param} \rangle$ indicates the time interval in
	seconds after that the selected ADC pin above the value specified
	with $\langle \mathbf{paramType} \rangle = 1$ causes the event. The range is $0 - 255$ .
	(Default: 0)
	• If <b><label></label></b> is ADCL1, <b><paramtype></paramtype></b> can assume values in the range 0 - 3.
	• if <b><paramtype></paramtype></b> = 1, <b><param/></b> indicates the ADC pin number;
	$\cup$ II <b>-paramitype</b> - 1, <b>-parami</b> multilles the ADC plit humber.

	Where <b><param0></param0></b> , <b><param1></param1></b> , <b><param2></param2></b> and <b><param3></param3></b> are defined as	before
	for <param/> depending on <label> value</label>	
AT#EVMONI=?	Test command returns values supported as a compound value	

#### 3.5.7.4.4. Send Message - #CMGS

<b>#CMGS - Send Message</b>	SELINT 2
(PDU Mode)	(PDU Mode)
AT#CMGS=	Execution command sends to the network a message.
<length>,<pdu></pdu></length>	
	Parameter:
	<li>length&gt; - length of the PDU to be sent in bytes (excluding the SMSC address octets).</li>
	7164

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 412 of 717

80000ST10025a Rev. 24 - 2016-09-07

#CMGS - Send Message	SELINT 2
	<b>pdu</b> > - PDU in hexadecimal format (each octet of the PDU is given as two IRA character long hexadecimal number) and given in one line.
	Note: when the length octet of the SMSC address (given in the <b><pdu></pdu></b> ) equals zero, the SMSC address set with command <b>+CSCA</b> is used; in this case the SMSC Type-of-Address octet shall not be present in the <b><pdu></pdu></b> .
	If message is successfully sent to the network, then the result is sent in the format:
	#CMGS: <mr></mr>
	where <b>mr&gt;</b> - message reference number; 3GPP TS 23.040 TP-Message-Reference in integer format.
	Note: if message sending fails for some reason, an error code is reported.
(Text Mode) AT#CMGS= <da> ,<text></text></da>	(Text Mode) Execution command sends to the network a message.
,~iexi>	Parameters: <da> - destination address, string type represented in the currently selected character set (see +CSCS).</da>
	<text> - text to send</text>
	The entered text should be enclosed between double quotes and formatted as follows:
	<ul> <li>- if current <dcs> (see +CSMP) indicates that GSM03.38 default alphabet is used and current <fo> (see +CSMP) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is not set, then ME/TA converts the entered text into GSM alphabet, according to GSM 27.005, Annex A.</fo></dcs></li> <li>- if current <dcs> (see +CSMP) indicates that 8-bit or UCS2 data coding scheme is used or current <fo> (see +CSMP) indicates that 3GPP TS 23.040 TP-User-Data-Header-Indication is set, the entered text should consist of two IRA character long hexadecimal numbers which ME/TA converts into 8-bit octet (e.g. the 'asterisk' will be entered as 2A (IRA50 and IRA65) and this will be converted to an octet with integer value 0x2A)</fo></dcs></li> </ul>
	If message is successfully sent to the network, then the result is sent in the format:
	#CMGS: <mr></mr>

#### 3.5.7.5. CONSUME Commands

#### 3.5.7.5.1. Configure consume parameters - #CONSUMECFG

#CONSUMECFG – configure c	consume parameters SELINT 2
AT#CONSUMECFG= <rule_i< th=""><th>This command sets the parameters related to the consume functionality</th></rule_i<>	This command sets the parameters related to the consume functionality
d>[, <service_type>[,<rule_ena< th=""><th></th></rule_ena<></service_type>	
ble>[, <period>[,<limit_amoun< th=""><th>Parameters:</th></limit_amoun<></period>	Parameters:
t>[, <action_id>]]]]]</action_id>	<rule_id></rule_id>
	Index of the rule to apply to a defined <b><service_type></service_type></b>
	Range: (0-10)
	The available rules are 10 and their identifier ranges from 1 to 10. The
	special case of <b><rule_id></rule_id></b> =0 is explained below in a note.
	<service type=""></service>
	Type of service to count:
	0 – No service (default)
	1 – SMS Sent
	2 – SMS Received
	3 – Total SMS
	4 - CS MO Calls
	5 - CS MT Calls
	6 – Total CS Calls
	7 – IP All Data Sent
	8 – IP All Data Received
	9 – IP All Data
	10 – IP All Data Sent (with Header)
	11 – IP All Data Received (with Header)
	12 – IP All Data (with Header)
	<rule enable=""></rule>
	Enable the counter on the rule
	0 - rule disabled (default)
	1 – rule enabled
	<pre><pre>cyperiod&gt;</pre></pre>
	Time period over which the service type data are counted: 0 - life (antire module life) (default)
	0 - life (entire module life) (default)
	1 - 8760 (hours)
	<limit_amount></limit_amount>
	Limit amount of data to count. 0 is default value and means no set limit: in
	this case only the counter is active.
	0 – 4294967295 KBytes, for <b><service_type></service_type></b> =7,8,9,10,11 and 12
	0 – 65535 number of SMS, for <b><service_type></service_type></b> =1,2, and 3
	0 – 65535 minutes, for <b><service_type></service_type></b> =4,5 and 6

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 416 of 717

80000ST10025a Rev. 24 - 2016-09-07

	<pre><action_id> Identifier of the action to trigger when the threshold limit has been reached. It corresponds to the AT command associated to the event CONSUMEX, where X=1,5. (Refer to #EVMONI command) Range: (0-5); 0 means no action associated: in this case only the counter is active. Note: the Set command #CONSUMECFG=0 has a special behaviour: for all the enabled rules, the data and time of related counters are reset (<u>if they are not-life counters</u>)</action_id></pre>
	Note: the values set by command are directly stored in NVM and don't depend on the specific CMUX instance
	Note: the life counters are disabled if <b><enable></enable></b> parameter of <b>AT#ENACONSUME</b> is equal to 0
	Note: a rule can be changed only setting <b><rule_enable>=</rule_enable></b> 0. The data and time of related counter are also reset ( <u>if it's not a life counter</u> ).
	Note: when the period expires, the counted data are reset, so the counting in the next period starts from 0.
	Note: if a service is blocked, then the related (life or not) counter is stopped also in terms of time (as well as in terms of data obviously).
AT#CONSUMECFG?	Read command returns the current settings for each rule in the format:
	#CONSUMECFG: <rule_id>,<service_type>,<rule_enable>,<period>,<limit_amount>,<a ction_id&gt;</a </limit_amount></period></rule_enable></service_type></rule_id>
AT#CONSUMECFG=?	Test command reports the supported range of values for all parameters

#### **3.5.7.5.2.** Enable consume functionality - #ENACONSUME

#ENACONSUME – enable consume functionality SELI		SELINT 2
AT#ENACONSUME= <enable< th=""><th>Set command enables/disables the consume functi</th><th>onality.</th></enable<>	Set command enables/disables the consume functi	onality.
>[, <storing_mode>[,<storing_< th=""><th></th><th></th></storing_<></storing_mode>		
period>]]	Parameters:	
	<enable></enable>	
	0 - disable consume functionality (default)	
	1 – disable consume functionality except life con	unters
	2 – enable consume functionality	
	<storing mode="">:</storing>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 417 of 717

80000ST10025a Rev. 24 - 2016-09-07

	0 – the counters are saved in NVM at every shuthdown (default) 1 – the counters are saved in NVM at every shuthdown and periodically at regular intervals specified by <b><storing_period></storing_period></b> parameter
	<pre><storing_period> - number of hours after that the counters are saved; numeric value in hours; range (0,8-24); 0 is default value and means no set period (as <storing_mode>=0)</storing_mode></storing_period></pre>
	Note: the values set by command are directly stored in NVM and don't depend on the specific CMUX instance
	Note: when the functionality is disabled with <b><enable></enable></b> =0, the data counters are stopped but not reset: to reset them ( <u>except life counters</u> ) set <b><rule_enable></rule_enable></b> =0 with <b>AT#CONSUMECFG</b> command.
	Note: when the functionality is disabled with <b><enable>=</enable></b> 1, the data counters are stopped <u>except life counters</u> .
	Note: the life counters are never reset, neither in terms of counted data nor in terms of time
AT#ENACONSUME?	Read command returns the current settings for all parameters in the format:
	#ENACONSUME: <enable>,<storing_mode>,<storing_period></storing_period></storing_mode></enable>
AT#ENACONSUME=?	Test command reports the supported range of values for all parameters

#### 3.5.7.5.3. Report consume statistics - #STATSCONSUME

#STATSCONSUME – report consume statistics SELINT 2	
AT#STATSCONSUME[= <cou< th=""><th>Execution command reports the values of the life counters for every type</th></cou<>	Execution command reports the values of the life counters for every type
nter_type>]	of service or the values of period counters for every rule.
	Parameter: <counter_type> Type of counter: range (0-1) 0 – period counter: the command returns the values of period counters for every rule defined with AT#CONSUMECFG command in the format: #STATSCONSUME: <rule_1>,<service_type>,<counted_data>,<threshold>,<current_time &gt;,<period><cr><lf>#STATSCONSUME:</lf></cr></period></current_time </threshold></counted_data></service_type></rule_1></counter_type>
	<rule_2>,<service_type>,<counted_data>,<threshold>,<current_time &gt;,<period><cr><lf><cr><lf>&gt;#STATSCONSUME:</lf></cr></lf></cr></period></current_time </threshold></counted_data></service_type></rule_2>

	#BLOCKCONSUME: <service_type>,<block></block></service_type>
AT#BLOCKCONSUME=?	Test command reports the supported range of values for <b><service_type></service_type></b> and <b><block></block></b> parameters

#### 3.5.7.6. FOTA Commands

#### 3.5.7.6.1. OTA Set Network Access Point - #OTASNAP

<b>#OTASNAP – OTA Set</b>	Network Access Point SELINT 0/1
AT#OTASNAP=	Set command specifies the SMS number that the module has to use to send the
<addr>[,<company_na< th=""><th>Remote Registration SM. If the current IMSI hasn't been yet registered, the</th></company_na<></addr>	Remote Registration SM. If the current IMSI hasn't been yet registered, the
me>]	Remote Registration SM is automatically sent.
	Parameters:
	<addr> - string parameter which specifies the phone number</addr>
	<company_name> - string parameter containing a client identifier</company_name>
	Note1: a special form of the Set command, <b>#OTASNAP=""</b> , causes the deletion of the SMS number
	Note2: the value of <b><addr></addr></b> parameter can be overwritten from the OTA server by the Provisioning SMS
	Note3: a change of the value of <b><company_name></company_name></b> parameter causes a new FOTA Registration procedure
	Note4: if the <b><company_name></company_name></b> is an empty string, an ERROR is returned
	Note5: the setting is saved in NVM
AT#OTASNAP?	Read command reports the current settings in the format:
	#OTASNAP: <addr>[,<company_name>]</company_name></addr>
AT#OTASNAP	Execution command has the same effect as the Read command
AT#OTASNAP =?	Test command returns the maximum length of <b><addr></addr></b> field and maximum length of <b><company_name></company_name></b> field. The format is:
	#OTASNAP: <nlength>,<tlength></tlength></nlength>
	where:
	<pre><nlength> - integer type value indicating the maximum length of field <addr></addr></nlength></pre>
	<tlength> - integer type value indicating the maximum length of field</tlength>
	<company_name></company_name>
Example	AT#OTASNAP="SMS Number","Client Alpha"
	OK
	AT#OTASNAP?
	#OTASNAP:"SMS Number","Client Alpha"

80000ST10025a Rev. 24 - 2016-09-07

<mark>#OTASNAPIPCFG - (</mark>	OTA Set Access Point Name for OTA over IP SELINT 2	
	<pre>password&gt; - string parameter, used only if the context requires it</pre>	
	<rsptimeout> - used when waiting for a response from OTA server, after the module has sent a message: if there's no response within this timeout period the TCP connection is closed. 0 - no timeout</rsptimeout>	
	165535 - timeout value in seconds (default 300 s.)	
	Note1: if the <b><bearer></bearer></b> is set to 0, then the APN is erased. If the bearer is already 0, any <b><apn></apn></b> or <b><username></username></b> or <b><password></password></b> will not be set	
	Note2: the values of <b><bearer></bearer></b> , <b><apn></apn></b> , <b><username></username></b> and <b><password></password></b> parameters can be overwritten from the OTA server by any SMS ( Command, RS Discovery Registration )	
	Note3: all the settings are saved in NVM	
AT#OTASNAPIPCF G?	Read command reports the current settings in the format:	
	#OTASNAPIPCFG: <bearer>,<apn>[,<username>[,<password>[,<rsptimeout>]]]</rsptimeout></password></username></apn></bearer>	
AT#OTASNAPIPCF G =?	Test command returns the range for <b><bearer></bearer></b> values, the maximum length of <b><apn></apn></b> , <b><username></username></b> and <b><password></password></b> string parameters and the range for <b><rsptimeout></rsptimeout></b> values. The format is:	
	#OTASNAPIPCFG: (0-2),99,49,49,(0-65535)	

#### 3.5.7.6.7. OTA Registration status - #OTAREG

<b>#OTAREG – OTA Registration status</b>		<mark>0/1/2</mark>
AT#OTAREG	Execution command reports the OTA registration status in the following	form:
	#OTAREG: <ota_reg_status>,<ota_registered_imsi></ota_registered_imsi></ota_reg_status>	
	Where:	
	<b><ota_reg_status></ota_reg_status></b> - numeric parameter:	
	- 0: module is not registered to the OTA server	
	- 1: module is registered to the OTA server	
	<b>CTA_registered_IMSI&gt;</b> - string parameter which contains the last IMS been registered to OTA server. If there isn't any register then the value is FFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFF	
	Note: if any SIM isn't inserted in the module, then <b><ota_reg_status></ota_reg_status></b> h	as value 0

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 432 of 717

80000ST10025a Rev. 24 – 2016-09-07

<mark>#OTAREG – OTA R</mark>		SELINT 0/1/2
AT#OTAREG =?	Test command returns <b>OK</b> result code.	
Example	//module has never been registered before to OTA server	
	at#otareg	
	#OTAREG: 0,FFFFFFFFFFFFFFF	
	OK	
	//the current IMSI is 222887445252672	
	at+cimi	
	222887445252672	
	ОК	
	//register the module to the OTA server at#otasnap=+39348XXXXXXX	
	ОК	
	#OTAEV: Registered	
	//module is registered to the OTA server with the IMSI 222 at#otareg	2887445252672
	#OTAREG: 1,222887445252672	
	OK	
	<pre>//extract the SIM: the module is considered not registered l inserted SIM; it's showed the last registered IMSI at#otareg</pre>	because there isn't any
	#OTAREG: 0,222887445252672	
	ОК	
	//insert a different SIM with IMSI 222015602268637	
	at+cimi 222015602268637	
	ОК	
	//the module is not yet registered with the current IMSI so registered IMSI at#otareg	it's showed the last
	#OTAREG: 0,222887445252672	
	ОК

### 3.5.7.7. Multisocket AT Commands

### 3.5.7.7.1. Socket Status - #SS

<b>#SS - Socket Status SELINT 2</b>	SELINT 2
AT#SS[= <connid>]</connid>	Execution command reports the current status of the socket:
	Parameters:
	<connid> - socket connection identifier</connid>
	16
	The response format is:
	#SS: <connid>,<state>,<locip>,<locport>,<remip>,<remport></remport></remip></locport></locip></state></connid>
	where:
	<connid>- socket connection identifier, as before</connid>
	< <b>state</b> > - actual state of the socket:
	0 - Socket Closed.
	1 - Socket with an active data transfer connection.
	2 - Socket suspended.
	3 - Socket suspended with pending data.
	4 - Socket listening.
	5 - Socket with an incoming connection. Waiting for the user accept or
	shutdown
	command.
	6 - Socket resolving DNS
	7 - Socket connecting
	<li>IP address associated by the context activation to the socket.</li>
	<locport> - two meanings:</locport>
	- the listening port if we put the socket in listen mode.
	- the local port for the connection if we use the socket to connect to a
	remote
	machine.
	<remip> - when we are connected to a remote machine this is the remote</remip>
	IP
	address.
	<remport> - it is the port we are connected to on the remote machine.</remport>
	Note: issuing <b>#SS<cr></cr></b> causes getting information about status of all the
	sockets;
	the response format is:
	#SS: <connid1>,<state1>,<locip1>,<locport1>,<remip1>,<remport1></remport1></remip1></locport1></locip1></state1></connid1>
	< <u>CR&gt;<lf></lf></u>
	#
	SS: <connid6>,<state6>,<locip6>,<locport6>,<remip6>,<remport6></remport6></remip6></locport6></locip6></state6></connid6>
AT#SS=?	Test command reports the range for parameter <connld></connld>
Example	AT#SS
	#SS: 1,3,91.80.90.162,61119,88.37.127.146,10510
	#SS: 2,4,91.80.90.162,1000 #SS: 3,0
	#SS: 3,0 #SS: 4,0

page 435 of 717

80000ST10025a Rev. 24 - 2016-09-07

#SS: 5,3,91.80.73.70,61120,88.37.127.146,10509
#SS: 6,0
OK
Socket 1: opened from local IP 91.80.90.162/local port 61119 to remote IP
88.37.127.146/remote port
10510
is suspended with pending data
Socket 2: listening on local IP 91.80.90.162/local port 1000
Socket 5: opened from local IP 91.80.73.70/local port 61120 to remote IP
88.37.127.146/remote port
10509
is suspended with pending data
AT#SS=2
#SS: 2,4,91.80.90.162,1000
OK
We have information only about socket number 2

### 3.5.7.7.2. Socket Info - #SI

#SI - Socket Info SELINT 2		
AT#SI[= <connid>]</connid>	Execution command is used to get information about socket data traffic.	
	Parameters:	
	<connid> - socket connection identifier</connid>	
	16	
	The response format is:	
	#SI: <connid>,<sent>,<received>,<buff_in>,<ack_waiting></ack_waiting></buff_in></received></sent></connid>	
	where:	
	<connid> - socket connection identifier, as before</connid>	
	<pre><sent> - total amount (in bytes) of sent data since the last time the socket</sent></pre>	
	<pre><received> - total amount (in bytes) of received data since the last time the socket</received></pre>	
	<ack_waiting> - total amount (in bytes) of sent and not yet acknowledged data since the last time the socket connection identified by <connid> has been opened</connid></ack_waiting>	
	Note: parameters associated with a socket identified by <connid> are cleared when the socket itself is connected again(#SD or #SA after #SL).</connid>	
	Until then, if previous connection has been established and closed, old values are yet available.	

page 436 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#SI - Socket Info</b>	SELINT 2
	<pre>Note: not yet acknowledged data are available only for TCP connections; the value <ack_waiting> is always 0 for UDP connections. Note: issuing #SI<cr> causes getting information about data traffic of all the sockets; the response format is: #SI: <connid1>,<sent1>,<received1>,<buff_in1>,<ack_waiting1> <cr><lf> #SI: <connid6>,<sent6>,<received6>,<buff_in6>,<ack_waiting6></ack_waiting6></buff_in6></received6></sent6></connid6></lf></cr></ack_waiting1></buff_in1></received1></sent1></connid1></cr></ack_waiting></pre>
AT#SI=?	Test command reports the range for parameter <b><connid></connid></b> .
Example	AT#SI         #SI: 1,123,400,10,50         #SI: 2,0,100,0,0         #SI: 3,589,100,10,100         #SI: 5,0,0,0         #SI: 5,0,0,0         #SI: 6,0,98,60,0         OK         Sockets 1,2,3,6 are opened with some data traffic.         For example socket 1 has 123 bytes sent, 400 bytes received, 10 byte waiting to be read and 50 bytes waiting to be acknowledged from the remote side.         AT#SI=1         #SI: 1,123,400,10,50         OK         We have information only about socket number 1

### **3.5.7.7.3.** Context Activation - #SGACT

<b>#SGACT - Context Act</b>	tivation SELINT 2
AT#SGACT= <cid>,</cid>	Execution command is used to activate or deactivate either the GSM context or the
<stat>[,<userid>,</userid></stat>	specified PDP context.
<pwd>]</pwd>	
	Parameters:
	<cid> - PDP context identifier</cid>
0 - specifies the GSM context	
	15 - numeric parameter which specifies a particular PDP context definition
	<stat></stat>
	0 - deactivate the context

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 437 of 717

80000ST10025a Rev. 24 – 2016-09-07

<mark>#SGACT - Contex</mark>	t Activation	<mark>SELINT 2</mark>
	1 - activate the context	
	<userid> - string type, used only if the context requires it <pwd> - string type, used only if the context requires it</pwd></userid>	
	Note: context activation/deactivation returns <b>ERROR</b> if the associated to it (see <b>AT#SCFG</b> ).	ere is not any socket
	Note: after the GSM context has been activated, you can use FTP or Email AT commands to send/receive TCP/IP packet	
	Note: to deactivate the GSM context, <b>AT#SGACT=0,0</b> has same serial port used when the context was activated.	to be issued on the
	Note: GSM context activation is affected by <b>AT+CBST</b> con GSM context activation is just allowed with "non transparen	
	Note: activating a GSM context while a PDP context is alre PDP context to be suspended.	ady activated causes the
	Note: if GSM context is active, it is not allowed any PDP context activation	
	Note: if username and/or password parameters are empty No Authetication is used by the module during the PDP CONTEXT ACTIVATION procedur also AT#SGACTAUTH).	
	Note: PDP context deactivation request cannot be executed and the module is registered in 2G (GPRS class B). The AT#SGACT=x,0 will return OK even if the request car Verify the current status with AT#SGACT?	
	Note: the response to the AT#SGACT command reports the from the network.	e IP address obtained
	In case of IPV4 PDP context, the response is in the format: #SGACT: xxx.xxx.xxx	
	In case of IPV6 PDP context, the response is in the format: +IP: xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xxx.xx	XX.XXX.XXX.XXX
AT#SGACT?	Returns the state of all the contexts that have been defined t +CGDCONT or #GSMCONT	hrough the commands
	#SGACT: <cid1>,<stat1><cr><lf></lf></cr></stat1></cid1>	
	 #SGACT: <cid5>,<stat5></stat5></cid5>	
	where:	
	<cid<i>n&gt; - as <cid> before</cid></cid<i>

#SGACT - Context Activation SELIN		<mark>SELINT 2</mark>
	<statn> - context status</statn>	
	0 - context deactivated	
	1 - context activated	
AT#SGACT=?	Test command reports the range for the parameters <b><cid></cid></b> and <b><stat></stat></b>	
Note	It is strongly recommended to use the same command (e.g. <b>#SGACT</b> ) to activate	
	the context, deactivate it and interrogate about its status.	

#### 3.5.7.7.4. Socket Shutdown - #SH

#SH - Socket Shutdown		SELINT 2
AT#SH= <connid></connid>	This command is used to close a socket.	
	Parameter: < <b>connId&gt; -</b> socket connection identifier 16	
AT#SH=?	Test command reports the range for parameter <b><connid></connid></b> .	

# 3.5.7.7.5. Socket Configuration - #SCFG

<b>#SCFG - Socket Confi</b>	guration	SELINT 2	
AT#SCFG=	Set command sets the socket configuration parameters.		
<connid>,<cid>,</cid></connid>			
<pktsz>,<maxto>,</maxto></pktsz>	Parameters:		
<connto>,<txto></txto></connto>	<connid> - socket connection identifier</connid>		
	16		
<cid> - PDP context identifier</cid>			
	0 - specifies the GSM context		
	15 - numeric parameter which specifies a particular PDP context definition <b><pktsz></pktsz></b> - packet size to be used by the TCP/UDP/IP stack for data sending.		
	$\hat{0}$ - select automatically default value(300).		
	11500 - packet size in bytes.		
	<maxto> - exchange timeout (or socket inactivity timeout); if there's no data</maxto>		
	exchange within this timeout period the connection is closed.		
	0 - no timeout		
	165535 - timeout value in seconds (default 90 s.)		
	<pre><connto> - connection timeout; if we can't establish a connection</connto></pre>	ion to the remote	
	within this timeout period, an error is raised.		
	101200 - timeout value in hundreds of milliseconds (default 6		
	<pre><txto> - data sending timeout; after this period data are sent als</txto></pre>	so if they're less	
	than max packet size.		
	0 - no timeout		
	1255 - timeout value in hundreds of milliseconds (default 50)		
	256 – set timeout value in 10 milliseconds		
	257 – set timeout value in 20 milliseconds		

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 439 of 717

80000ST10025a Rev. 24 - 2016-09-07

<mark>#SCFG - Socket C</mark>	onfiguration	SELINT 2
	<ul> <li>258 – set timeout value in 30 milliseconds</li> <li>259 – set timeout value in 40 milliseconds</li> <li>260 – set timeout value in 50 milliseconds</li> <li>261 – set timeout value in 60 milliseconds</li> <li>262 – set timeout value in 70 milliseconds</li> <li>263 – set timeout value in 80 milliseconds</li> <li>264 – set timeout value in 90 milliseconds</li> <li>Note: these values are automatically saved in NVM.</li> <li>Note: if DNS resolution is required, max DNS resolution</li> </ul>	tion time(20 sec) has to be
AT#SCFG?	Read command returns the current socket configuration parameters values for a the six sockets, in the format:         #SCFG: <connid1>,<cid1>,<pktsz1>,<maxto1>,<connto1>,<txto1> <cr><lf>            #SCFG: <connid6>,<cid6>,<pktsz6>,<maxto6>,<connto6>,<txto6></txto6></connto6></maxto6></pktsz6></cid6></connid6></lf></cr></txto1></connto1></maxto1></pktsz1></cid1></connid1>	
AT#SCFG=? Example	Test command returns the range of supported values if           at#scfg?           #SCFG: 1,1,300,90,600,50           #SCFG: 2,2,300,90,600,50           #SCFG: 3,2,250,90,600,50           #SCFG: 4,1,300,90,600,50           #SCFG: 5,1,300,90,600,50           #SCFG: 6,1,300,90,600,50           #SCFG: 6,1,300,90,600,50           #SCFG: 6,1,300,90,600,50	for all the subparameters.

## **3.5.7.7.6.** Socket Configuration Extended - #SCFGEXT

#SCFGEXT - Socket Configuration Extended		SELINT 2
AT#SCFGEXT=	Set command sets the socket configurat	ion extended parameters.
<conned>,&lt;<i>srMode</i>&gt;,</conned>		
<recvdatamode>,</recvdatamode>	Parameters:	
<keepalive>,</keepalive>	<connid> - socket connection identifier</connid>	r
[, <listenautorsp></listenautorsp>	16	
[, <senddatamode>]</senddatamode>		
ĺ	<pre><srmode> - SRing unsolicited mode</srmode></pre>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 440 of 717

80000ST10025a Rev. 24 - 2016-09-07

	$0  \text{Nerves} = 1  (1 - f_{res})$
	0 - Normal (default):
	SRING: <connid> where <connid> is the socket connection</connid></connid>
	identifier
	1 – Data amount:
	SRING: <connid>,<recdata> where <recdata> is the amount of</recdata></recdata></connid>
	data received on the socket connection number <connid></connid>
	2 - Data view:
	SRING: <connid>,<recdata>,<data> same as before and <data> is</data></data></recdata></connid>
	data received displayed following <datamode> value</datamode>
	3 – Data view with UDP datagram informations:
	SRING: <sourceip>,<sourceport><connid>,<recdata>,</recdata></connid></sourceport></sourceip>
	<dataleft>,<data> same as before with <sourceip>,<sourceport> and</sourceport></sourceip></data></dataleft>
	<dataleft> that means the number of bytes left in the UDP datagram</dataleft>
	Note: <srmode> value 3 is not available in SW 13.00.xxx</srmode>
	<recvdatamode> - data view mode for received data</recvdatamode>
	in command mode(AT#SRECV or <srmode> = 2)</srmode>
	0- text mode (default)
	1- hexadecimal mode
	< <i>keepalive</i> > - Set the TCP Keepalive value in minutes
	0 – Deactivated (default)
	1 - 240 - Keepalive time in minutes
	< <i>ListenAutoRsp</i> > - Set the listen auto-response mode, that affects
	the commands AT#SL and AT#SLUDP
	0 - Deactivated (default)
	1 – Activated
	<senddatamode> - data mode for sending data</senddatamode>
	in command mode(AT#SSEND)
	0 - data represented as text (default)
	1 - data represented as sequence of hexadecimal numbers (from
	00 to FF)
	Each octet of the data is given as two IRA character long
	hexadecimal number
	Note: these values are automatically saved in NVM.
	Note: Keepalive is available only on TCP connections.
	Note: for the behaviour of AT#SL and AT#SLUDP in case of auto-
	response mode or in case of no auto-response mode, see the
	description of the two commands.
AT#SCFGEXT?	Read command returns the current socket extended configuration

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 441 of 717

	parameters values for all the six sockets, in the format: #SCFGEXT: <connid1>, <srmode1>,<datamode1>,<keepalive1>, <listenautorsp1>,0<cr><lf>  #SCFGEXT:<connid6>, <srmode6>,<datamode6>,<keepalive6>, <listenautorsp6>,0<cr><lf></lf></cr></listenautorsp6></keepalive6></datamode6></srmode6></connid6></lf></cr></listenautorsp1></keepalive1></datamode1></srmode1></connid1>
AT#SCFGEXT=?	Test command returns the range of supported values for all the subparameters.
Example	Socket 1 set with data view sring, text data mode, a keepalive time of 30 minutes and listen auto-response set. Socket 3 set with data amount sring, hex recv data mode, no keepalive and listen auto-response not set.
	Socket 4 set with hex recv and send data mode at#scfgext? #SCFGEXT: 1,2,0,30,1,0 #SCFGEXT: 2,0,0,0,0 #SCFGEXT: 3,1,1,0,0,0 #SCFGEXT: 4,0,1,0,0,1 #SCFGEXT: 5,0,0,0,0,0 #SCFGEXT: 6,0,0,0,0,0

# **3.5.7.7.7.** Socket configuration Extended 2 - #SCFGEXT2

#SCFGEXT2 - Socket Configuration Extended 2 SELINT 2		SELINT 2
AT#SCFGEXT2= <connid>,<bufferstart>, [,<abortconnattempt></abortconnattempt></bufferstart></connid>	Set command sets the socket configuration extended features not included in #SCFGEXT command.	ed parameters for

### 3.5.7.7.10. Socket Dial - #SD

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 446 of 717

80000ST10025a Rev. 24 – 2016-09-07

<mark>#SD - Socket Dial</mark>	SELINT 2
AT#SD= <connid>,</connid>	Execution command opens a remote connection via socket.
<txprot>,<rport>,</rport></txprot>	
<ipaddr></ipaddr>	Parameters:
, <closuretype></closuretype>	<connid> - socket connection identifier</connid>
, <lport></lport>	16
[, <connmode>]]]</connmode>	<txprot> - transmission protocol</txprot>
	0 - TCP
	1 - UDP
	<rport> - remote host port to contact</rport>
	165535
	<pre><ipaddr> - address of the remote host, string type. This parameter can be either:</ipaddr></pre>
	- any valid IP address in the format: "xxx.xxx.xxx.xxx"
	- any host name to be solved with a DNS query
	<closuretype> - socket closure behaviour for TCP when remote host has closed</closuretype>
	0 - local host closes immediately (default)
	255 - local host closes after an AT#SH or immediately in case of an abortive
	disconnect from remote.
	<li>IPort&gt; - UDP connections local port</li>
	165535
	<connmode> - Connection mode</connmode>
	0 - online mode connection (default)
	1 - command mode connection
	Note: <b><closuretype></closuretype></b> parameter is valid for TCP connections only and has no effect (if used) for UDP connections.
	Note: <b><iport></iport></b> parameter is valid for UDP connections only and has no effect (if used) for TCP connections.
	Note: if we set <b><connmode></connmode></b> to <b>online mode connection</b> and the command is successful we enter in <b>online data mode</b> and we see the intermediate result code <b>CONNECT</b> . After the <b>CONNECT</b> we can suspend the direct interface to the socket connection (nb the socket stays open) using the escape sequence (+++): the module moves back to <b>command mode</b> and we receive the final result code <b>OK</b> after the suspension. After such a suspension, it's possible to resume it in every moment (unless the socket inactivity timer timeouts, see <b>#SCFG</b> ) by using the <b>#SO</b> command with the corresponding <b><connid></connid></b> .
	Note: if we set <b><connmode></connmode></b> to <b>command mode connection</b> and the command is successful, the socket is opened and we remain in <b>command mode</b> and we see the result code <b>OK</b> .
	Note: if there are input data arrived through a connected socket and not yet read because the module entered <b>command mode</b> before reading them (after an escape sequence or after <b>#SD</b> has been issued with <b><connmode></connmode></b> set to <b>command mode</b> <b>connection</b> ), these data are buffered and we receive the <b>SRING</b> URC ( <b>SRING</b>

80000ST10025a Rev. 24 – 2016-09-07

<mark>#SL - Socket Listen</mark>	SELINT 2
<listenport></listenport>	
>[, <closure type="">]</closure>	Parameters:
	<connid> - socket connection identifier</connid>
	16
	<li>listenState&gt; -</li>
	0 - closes socket listening
	1 - starts socket listening
	<li>listenPort&gt; - local listening port</li>
	165535
	<pre><closure type=""> - socket closure behaviour for TCP when remote host has closed</closure></pre>
	0 - local host closes immediately (default)
	255 - local host closes after an <b>AT#SH</b> or immediately in case of an abortive
	disconnect from remote.
	Note: if successful, the command returns a final result code <b>OK</b> .
	If the ListenAutoRsp flag has not been set through the command AT#SCFGEXT
	(for the specific connId), then, when a TCP connection request comes on the inp
	port, if the sender is not filtered by internal firewall (see <b>#FRWL</b> ), an URC is
	received:
	+SRING: <connid></connid>
	Afterwards we can use <b>#SA</b> to accept the connection or <b>#SH</b> to refuse it.
	If the ListenAutoRsp flag has been set, then, when a TCP connection request
	comes on the input port, if the sender is not filtered by the internal firewall (see
	command <b>#FRWL</b> ), the connection is automatically accepted: the <b>CONNECT</b>
	indication is given and the modem goes into <b>online data mode</b> .
	indication is given and the modern goes into online data mode.
	If the socket is closed by the network the following URC is received:
	#SL: ABORTED
	Note: when closing the listening socket <listenport> is a don't care</listenport>
	parameter
	parameter
	Note: <closuretype> 255 takes effect on a command mode connection</closuretype>
	(connection accepted through AT#SA= <connid>,1 or online mode connection</connid>
	suspended with +++) only if <b>#SCFGEXT3 <closuretypecmdmodeenabling< b="">&gt;</closuretypecmdmodeenabling<></b>
	parameter has been previously enabled.
AT#SL?	Read command returns all the actual listening TCP sockets.
AT#SL=?	Test command returns the range of supported values for all the subparameters.
Example	Next command opens a socket listening for TCP on port 3500 without.
	AT#SL=1,1,3500
	OK

80000ST10025a Rev. 24 - 2016-09-07

	Data In Command Mode         SELINT 2
AT#SSEND= <connid></connid>	Execution command permits, while the module is in <b>command mode</b> , to send data through a connected socket.
	Parameters: <connid> - socket connection identifier 16</connid>
	The device responds to the command with the prompt $\leq \leq \leq$
	To complete the operation send Ctrl-Z char $(0x1A \text{ hex})$ ; to exit without writing the message send ESC char $(0x1B \text{ hex})$ .
	If data are successfully sent, then the response is <b>OK</b> . If data sending fails for some reason, an error code is reported
	Note: the maximum number of bytes to send is 1024 bytes for versions till 7.03.02/7.02.07 and from 10.0x.xx0 till 10.0x.xx2, 1500(TCP)/1472(UDP) bytes for versions starting from 10.0x.xx3 ; trying to send more data will cause the surplus to be discarded and lost.
	Note: it's possible to use <b>#SSEND</b> only if the connection was opened by <b>#SD</b> , else the ME is raising an error.
	Note: a byte corresponding to BS char $(0x08)$ is treated with its corresponding meaning; therefore previous byte will be cancelled(and BS char itself will not be sent)
AT#SSEND=?	Test command returns the range of supported values for parameter <b><connid></connid></b>
Example	Send data through socket number 2 AT#SSEND=2 >Test <ctrl-z></ctrl-z>
	OK

### 3.5.7.7.16. Send Data In Command Mode - #SSEND

#### **3.5.7.7.17.** Socket Info Extended - #SIEXT

<mark>#SIEXT –</mark> Socket Info Exte	nded SELINT 2
AT#SIEXT[= <connid>]</connid>	Execution command is used to get information about socket data traffic
	Parameters: <b><connid></connid></b> - socket connection identifier 16
	The response format is:

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 453 of 717

	#SIEXT: <connid>,<retx>,<oos>,<rsrvd1>,<rsrvd2></rsrvd2></rsrvd1></oos></retx></connid>
	<ul> <li>where:</li> <li><connid> - socket connection identifier, as before</connid></li> <li><retx> - total amount of retransmissions of outgoing packets since the last time the socket connection identified by</retx></li> <li><connid> has been opened</connid></li> <li><oos> - total amount of ingoing out of sequence packets (packets which sequence number is greater than the next expected one) since the last time the socket connection identified by <connid> has been opened</connid></oos></li> <li><rsrvd1 2=""> - reserved fields for future development of new statistics. Currently they're always equal to 0</rsrvd1></li> </ul>
	Note: parameters associated with a socket identified by <connid> are cleared when the socket itself is connected again (#SD or #SA after #SL). Until then, if previous connection has been established and closed, old values are yet available.</connid>
	Note: both <b><retx></retx></b> and <b><oos></oos></b> parameters are available only for TCP connections; their value is always 0 for UDP connections.
	Note: issuing <b>#SIEXT<cr></cr></b> causes getting information about data traffic of all the sockets; the response format is:
	#SI: <connid1>,<retx1>,<oos1>,<rsrvd1_1>,&lt; rsrvd2_1&gt; <cr><lf></lf></cr></rsrvd1_1></oos1></retx1></connid1>
	 #SI: <connid6>,<retx6>,<oss6>,&lt; rsrvd1_6&gt;,&lt; rsrvd2_6&gt;</oss6></retx6></connid6>
AT#SIEXT=?	Test command reports the range for parameter <b><connid></connid></b> .

### 3.5.7.7.18. Send data in Command Mode extended - #SSENDEXT

#SSENDEXT - Send Data In Command Mode extended SELINT 2		SELINT 2
AT#SSENDEXT= <connid>, <bytestosend></bytestosend></connid>	Execution command permits, while the module is in <b>comma</b> data through a connected socket including all possible octet (from 0x00 to 0xFF).	
	Parameters: <connid> - socket connection identifier 16</connid>

#SSENDEXT - Send l	Data In Command Mode extended	SELINT 2
	<ul> <li>&lt; bytestosend &gt; - number of bytes to be sent Please refer to test command for range</li> <li>The device responds to the command with the prompt <greater_than><space> and waits for the data to send.</space></greater_than></li> <li>When <bytestosend> bytes have been sent, operation is auto completed.</bytestosend></li> <li>If data are successfully sent, then the response is OK.</li> <li>If data sending fails for some reason, an error code is report.</li> <li>Note: it's possible to use #SSENDEXT only if the connectin #SD, else the ME is raising an error.</li> <li>Note: all special characters are sent like a generic byte.</li> <li>(For instance: 0x08 is simply sent through the socket and do BS, i.e. previous character is not deleted)</li> </ul>	ed. on was opened by
AT#SSENDEXT=?	Test command returns the range of supported values for para and <b><bytestosend></bytestosend></b>	ameters < connId >
Example	Open the socket in command mode: at#sd=1,0, <port>,"IP address",0,0,1 OK</port>	
	Give the command specifying total number of bytes as seco	nd parameter:
	at#ssendext=1,256 >; // Terminal echo of bytes sent is displ	layed here
	OK All possible bytes(from 0x00 to 0xFF) are sent on the socke	t as generic bytes.

# **3.5.7.7.19.** IP Easy Authentication Type - #SGACTAUTH

#SGACTAUTH – Easy IP Authentication Type SELINT 2		
AT#SGACTAUTH= <type></type>	Set command sets the authentication type for IP Easy This command has effect on the authentication mode used on AT#SGACT or AT#GPRS commands.	
	Parameter <b><type></type></b> 0 - no authentication 1 - PAP authentication (factory default) 2 - CHAP authentication	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 455 of 717

80000ST10025a Rev. 24 – 2016-09-07

<mark>#SGACTAUTH – Eas</mark>	y IP Authentication Type	SELINT 2
	Note: the parameter is not saved in NVM	
	Note: PAP Authentication is default when AT#SGACT contains username e/o password. No Authentication is default when AT#SGACT doesn't contains username and password.	
AT#SGACTAUTH?	Read command reports the current IP Easy authentication type, in the format:	
	#SGACTAUTH: <type></type>	
AT#SGACTAUTH =?	Test command returns the range of supported values for parameter <	type>.

# 3.5.7.7.20. Context activation and configuration - #SGACTCFG

#SGACTCFG - Context Activation and Configuration SELINT 2		
AT#SGACTCFG=	Execution command is used to enable or disable the automatic	
<cid>,</cid>	activation/reactivation of the context for the specified PDP conte	
<retry>,</retry>	maximum number of attempts and to set the delay between an at	
[, <delay></delay>	next one. The context is activated automatically after every GPRS Attach or	
[, <urcmode>]]</urcmode>	after a NW PDP CONTEXT deactivation if at least one IPEasy socket is	
	configured to this context (see AT#SCFG).	
	Parameters:	
	<cid> - PDP context identifier (see +CGDCONT command)</cid>	
	15 - numeric parameter which specifies a particular PDP cont	ext definition
	<retry> - numeric parameter which specifies the maximum num activation attempts in case of activation failure. The value belon following range: 0 - 15</retry>	
	0 - disable the automatic activation/reactivation of the context (d	lefault)
	<delay> - numeric parameter which specifies the delay in second attempt and the next one. The value belongs to the following ran</delay>	
	<ur><li><urcmode> - URC presentation mode</urcmode></li></ur>	
	0 - disable unsolicited result code (default)	
	1 - enable unsolicited result code, after an automatic activation/r the local IP address obtained from the network. It has meaning o	
	<pre><auto>=1. The unsolicited message is in the format:</auto></pre>	illy ll
	#SGACT: <ip_address></ip_address>	
	reporting the local IP address obtained from the network.	
	Note: the URC presentation mode <urcmode> is related to the curches a second se</urcmode>	urrent AT

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 456 of 717

80000ST10025a Rev. 24 - 2016-09-07

	<ul> <li>instance only. Last <urcmode> setting is saved for every instance as extended profile parameter, thus it is possible to restore it even if the multiplexer control channel is released and set up, back and forth.</urcmode></li> <li>Note: &lt; retry &gt; and <delay> setting are global parameter saved in NVM</delay></li> <li>Note: if the automatic activation is enabled on a context, then it is not allowed to modify by the command AT#SCFG the association between the context itself and the socket connection identifier; all the other parameters of command AT#SCFG are modifiable while the socket is not connected</li> </ul>
AT#SGACTCFG?	Read command reports the state of all the five contexts, in the format:
	#SGACTCFG: <cid1>,<retry1>,<delay1>, &lt; urcmode &gt;CR&gt;<lf>  #SGACTCFG: <cid5>,<retry5>,<delay5>,&lt; urcmode &gt;</delay5></retry5></cid5></lf></delay1></retry1></cid1>
	"Sorver er e
	where:
	$\langle \operatorname{cid} n \rangle$ - as $\langle \operatorname{cid} \rangle$ before
	<retryn> - as <retry> before <delayn> - as <delay> before</delay></delayn></retry></retryn>
	< urcmode $>$ - as $<$ urcmode $>$ before
AT#SGACTCFG =?	Test command reports supported range of values for parameters <cid></cid>
	>, <retry>,<delay>and &lt; urcmode &gt;</delay></retry>

# 3.5.7.7.21. Context activation and configuration extended - #SGACTCFGEXT

#SGACTCFGEXT - context activation configuration extended SELINT 2		
AT#SGACTCFGEXT=	Execution command is used to enable new features related to	
<cid>,</cid>	context activation.	
<abortattemptenable></abortattemptenable>		
[, <unused></unused>	Parameters:	
[, <unused></unused>		
[, <unused></unused>	<cid> - PDP context identifier (see +CGDCONT command)</cid>	
111	15 - numeric parameter which specifies a particular PDP context definition	
	< abortAttemptEnable > 0 – old behaviour: no abort possible while attempting context activation 1 – abort during context activation attempt is possible by sending a byte on the serial port. It takes effect on successive GPRS context activation attempt through #SGACT command in the following manner. While waiting for AT#SGACT= <cid>,1 response(up to 150 s) is possible to abort attempt by sending a byte and get back AT interface control(NO CARRIER indication).</cid>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 457 of 717

80000ST10025a Rev. 24 - 2016-09-07

	Note:
	If we receive delayed CTXT ACTIVATION ACCEPT after abort, network
	will be automatically informed of our aborted attempt through
	relative protocol messages(SM STATUS) and will also close on
	its side.
	Otherwise, if no ACCEPT is received after abort, network will be informed
	later of our PDP state through other protocol messages
	(routing area update for instance).
AT# SGACTCFGEXT?	Read command reports the state of all the five contexts, in the format:
	#SGACTCFGEXT: <cid1>,&lt; abortAttemptEnable1 &gt;,0,0,0<cr><lf></lf></cr></cid1>
	 #SGACTCFGEXT: <cid5>,&lt; abortAttemptEnable5 &gt;,0,0,0<cr><lf></lf></cr></cid5>
	where:
	<cidn> - as <cid> before</cid></cidn>
	< abortAttemptEnable <i>n</i> > - as < abortAttemptEnable > before
	Note: values are automatically saved in NVM.
AT#SGACTCFGEXT=?	Test command reports supported range of values for all parameters

### **3.5.7.7.22. PAD command features - #PADCMD**

#PADCMD – PAD command features SELINT 2	
AT#PADCMD= <mode></mode>	This command sets features of the pending data flush to socket, opened with AT#SD command.
	Parameters: <b>mode&gt;:</b> Bit 1: 1 - enable forwarding; 0 – disable forwarding;
	Other bits reserved; Note: forwarding depends on character defined by AT#PADFWD
AT#PADCMD?	Read command reports the currently selected <b><mode></mode></b> in the format: <b>#PADCMD: mode</b>
AT#PADCMD=?	Test command reports the supported range of values for parameter <b><mode></mode></b> .

#### 3.5.7.7.23. PAD forward character - #PADFWD

 #PADFWD – PAD forward character
 SELINT 2

 AT#PADFWD=<char>
 This command sets the char that immediately flushes pending data to

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

80000ST10025a Rev. 24 - 2016-09-07

[, <mode>]</mode>	socket, opened with AT#SD command.
	Parameters:
	<char>:</char>
	a number, from 0 to 255, that specifies the asci code of the char used to
	flush data
	<mode>:</mode>
	flush mode,
	0 – normal mode (default);
	1 – reserved;
	Note: use AT#PADCMD to enable the socket char-flush activity.
AT#PADFWD?	Read command reports the currently selected <b><char></char></b> and <b><mode></mode></b> in the
	format:
	#PADFWD: <char>,mode</char>
AT#PADFWD=?	Test command reports the supported range of values for parameters
	<char> and <mode>.</mode></char>

### 3.5.7.7.24. Base64 encoding/decoding of data sent/received on a socket - #BASE64

<b>#BASE64 – Base64 encoding/dee</b>	coding of data sent/received on a skt SELINT 2
AT#BASE64=	Set command enables base64 encoding and/or decoding of data
<connid>,<enc>,<dec></dec></enc></connid>	sent/received to/from the socket in online or in command mode.
[, <unused_b></unused_b>	
[, <unused_c>]]</unused_c>	Parameters:
	<connid> - socket connection identifier</connid>
	16
	<enc></enc>
	0 - no encoding of data received from serial port.
	1 - MIME RFC2045 base64 encoding of data received from serial port
	that have to be sent to <connid> socket.</connid>
	Note: as indicated from RFC2045 the encoded output stream is represented
	in lines of no more than 76 characters each.
	Lines are defined as sequences of octets separated by a CRLF sequence.
	2 - RFC 3548 base64 encoding of data received from serial port that have
	to be sent to <connid> socket.</connid>
	Note: as indicated from RFC3548 CRLF have not to be added.
	<dec></dec>
	0 - no decoding of data received from socket <connid>.</connid>
	1 - MIME RFC2045 base64 decoding of data received from socket
	<connid> and sent to serial port.</connid>
	(Same rule as for <enc> regarding line feeds in the received file that has to</enc>
	be decoded)

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 459 of 717

	<ul> <li>2 - RFC3548 base64 decoding of data received from socket <connid> and sent to serial port.</connid></li> <li>(Same rule as for <enc> regarding line feeds in the received file that has to be decoded)</enc></li> <li>Note: it is possible to use command to change current <enc>/<dec> settings for a socket already opened in command mode or in online mode after suspending it.</dec></enc></li> <li>(In this last case obviously it is necessary to set AT#SKIPESC=1).</li> <li>Note: to use #BASE64 in command mode, if data to send exceed maximum value for #SSENDEXT command, they have to be divided in multiple parts.</li> <li>These parts have to be a multiple of 57 bytes, except for the last one, to distinguish EOF condition.</li> <li>(Base64 encoding rules)</li> <li>For the same reason if #SRECV command is used by the application to receive data, a multiple of 78 bytes has to be considered.</li> <li>Note: to use #SRECV to receive data with <dec> enabled, it is necessary to consider that: reading <maxbyte> bytes from socket, user will get less due to decoding that is performed.</maxbyte></dec></li> </ul>
	Note: on version 10.0x.xx3 only <connid> 1 is available. Note: values are automatically saved in NVM.</connid>
AT# BASE64?	Read command returns the current <enc>/<dec> settings for all the six sockets, in the format: # BASE64:<connid1><enc1>,<dec1>,0,0<cr><lf>  # BASE64:<connid6>,<enc6>,<dec6>,0,0<cr><lf></lf></cr></dec6></enc6></connid6></lf></cr></dec1></enc1></connid1></dec></enc>
AT# BASE64=?	Test command returns the range of supported values for all the subparameters.
Example	AT#SKIPESC=1 OK AT#SD= <connid>,<txprot>,<rport>,<ipaddr> CONNECT //Data sent without modifications(default) </ipaddr></rport></txprot></connid>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 460 of 717

### **3.5.7.7.25.** Send UDP data to a specific remote host - #SSENDUDP

<b>#SSENDUDP – send UDP data to</b>	a specific remote host SELINT 2	
AT#SSENDUDP= <connid></connid>	This command permits, while the module is in command mode, to send	
, <remoteip>,<remoteport></remoteport></remoteip>	data over UDP to a specific remote host.	
	UDP connection has to be previously completed with a first remote host through <b>#SLUDP</b> / <b>#SA</b> . Then, if we receive data from this or another host, we are able to send data to it. Like command <b>#SSEND</b> , the device responds with '> ' and waits for the data to send.	
	Parameters: <connid> - socket connection identifier 16</connid>	
	<remoteip> - IP address of the remote host in dotted decimal notation, string type: "xxx.xxx.xxx"</remoteip>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

	<remote darts="" host="" part<="" remote="" th=""></remote>	
	<remoteport> - remote host port 165535</remoteport>	
	1	
	Note: after SRING that indicates incoming UDP data and issuing <b>#SRECV</b> to receive data itself, through <b>#SS</b> is possible to check last remote host (IP/Port).	
	Note: if successive resume of the socket to online mode Is performed( <b>#SO</b> ), connection with first remote host is restored as it was before.	
	Note: the maximum number of bytes to send is 1472 bytes	
AT#SSENDUDP=?	Test command reports the supported range of values for parameters <connid>,<remoteip> and <remoteport></remoteport></remoteip></connid>	
Example	Starts listening on <locport>(previous setting of firewall through #FRWL has to be done)</locport>	
	AT#SLUDP=1,1, <locport> OK</locport>	
	SRING: 1 // UDP data from a remote host available	
	AT#SA=1,1 OK	
	SRING: 1	
	AT#SI=1 #SI: 1,0,0,23,0 // 23 bytes to read	
	ОК	
	AT#SRECV=1,23 #SRECV:1,23 message from first host	
	ОК	
	AT#SS=1 #SS: 1,2, <locip>,<locport>,<remip1>,<remport1></remport1></remip1></locport></locip>	
	ОК	
	AT#SSENDUDP=1, <remip1>,<remport1> &gt;response to first host OK</remport1></remip1>	
	SRING: 1 // UDP data from a remote host available	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 462 of 717

80000ST10025a Rev. 24 - 2016-09-07

AT#SI=1 #SI: 1,22,23,24,0 // 24 bytes to read
OK
AT#SRECV=1,24 #SRECV:1,24 message from second host
OK
AT#SS=1 #SS: 1,2, <locip>,<locport>,<remip2>,<remport2> OK</remport2></remip2></locport></locip>
Remote host has changed, we want to send a reponse:
AT#SSENDUDP=1, <remip2>,<remport2> &gt;response to second host OK</remport2></remip2>

3.5.7.7.26.	Send UDP data to a specific remote host extended - #SSENDUDPEXT

<b>#SSENDUDPEXT – send UDP dat</b>	ta to a specific remote host extended SELINT 2	
AT#SSENDUDPEXT	This command permits, while the module is in command mode, to send	
= <connid>,<bytestosend>,</bytestosend></connid>	data over UDP to a specific remote host	
, <remoteip>,<remoteport></remoteport></remoteip>	including all possible octets(from 0x00 to 0xFF)	
	As indicated about <b>#SSENDUDP</b> : UDP socket has to be previously opened through <b>#SLUDP</b> / <b>#SA</b> , then we are able to send data to different remote hosts Like <b>#SSENDEXT</b> , the device responds with the prompt '> ' and waits for the data to send, operation is automatically completed when <b><bytestosend></bytestosend></b> have been sent.	
	Parameters: < <b>connId&gt; -</b> socket connection identifier 16	
	 <b>bytestosend&gt; -</b> number of bytes to be sent 1-1472	
	<remoteip> - IP address of the remote host in dotted decimal notation, string type: "xxx.xxx.xxx"</remoteip>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 463 of 717

80000ST10025a Rev. 24 - 2016-09-07

	<remoteport> - remote host port 165535</remoteport>
AT#SSENDUDPEXT=?	Test command reports the supported range of values for parameters
	<connid>,<bytestosend>,<remoteip> and <remoteport></remoteport></remoteip></bytestosend></connid>

# 3.5.7.7.27. Socket Type - #ST

<mark>#ST – Socket Type</mark>	SELINT 2
AT#ST – Socket Type	Set command reports the current type of the socket (TCP/UDP) and its direction
[= <connid>]</connid>	(Dialer / Listener)
	Parameter: < <b>ConnId</b> > - socket connection identifier 16
	The response format is:
	#ST: <connid>,<type>,<direction></direction></type></connid>
	where
	< connId > - socket connection identifier
	16
	< type > - socket type
	0 - No socket
	1 – TCP socket
	2 – UDP socket
	< direction > - direction of the socket
	0 – No
	1 – Dialer
	2 – Listener
	Note: issuing <b>#ST<cr></cr></b> causes getting information about type of all the sockets; the response format is:
	#ST: <connid1>,<type1>,<direction1> <cr><lf></lf></cr></direction1></type1></connid1>
	 #ST: <connid6>,&lt; type 6&gt;,&lt; direction 6&gt;</connid6>
AT#ST=?	Test command reports the range for parameter <connid>.</connid>
Example	single socket:
	AT#ST=3 #ST: 3,2,1

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 464 of 717

80000ST10025a Rev. 24 - 2016-09-07

<mark>#ST – Socket T</mark>	ype	SELINT 2
	Socket 3 is an UDP dialer.	
	All sockets:	
	AT#ST	
	#ST: 1,0,0	
	#ST: 2,0,0	
	#ST: 3,2,1	
	#ST: 4,2,2	
	#ST: 5,1,1	
	#ST: 6,1,2	
	Socket 1 is closed.	
	Socket 2 is closed.	
	Socket 3 is an UDP dialer	
	Socket 4 is an UDP listener	
	Socket 5 is a TCP dialer	
	Socket 6 is a TCP listener	

### 3.5.7.7.28. Detect the cause of a socket disconnection - #SLASTCLOSURE

<mark>#SLASTCLOSURE – Detect</mark>	the cause of a socket disconnection SELINT 2
AT#SLASTCLOSURE[=	Execution command reports socket disconnection cause
[ <connid>]</connid>	Parameters:
	<connid> - socket connection identifier</connid>
	16
	The response format is:
	#SLASTCLOSURE: <connid>,<cause></cause></connid>
	where: <pre><connid> - socket connection identifier, as before</connid></pre>
	<cause> - socket disconnection cause:</cause>
	0 – not available(socket has not yet been closed)
	1 remote host TCP connection close due to FIN/END: normal remote disconnection decided by the remote application
	2remote host TCP connection close due to RST, all others cases in which the socket is aborted without indication from peer (for instance)
	because peer doesn't send ack after maximum number of

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 465 of 717

	retransmissions/peer is no more alive). All these cases include all the "FATAL" errors after recv or send on the
	TCP socket(named as different from EWOULDBLOCK)
	3 socket inactivity timeout
	4 network deactivation(PDP context deactivation from network)
	Note: issuing <b>#SLASTCLOSURE</b> < <b>CR</b> > causes getting socket disconnection reason for all the sockets
	Note: any time socket is re-opened, last disconnection cause is reset. Command report 0(not available).
	Note: user closure cause( <b>#SH</b> ) is not considered and if a user closure is performed after remote disconnection, remote disconnection cause remains saved and is not overwritten.
	Note: if more consecutive closure causes are received, the original disconnection cause is saved.
	(For instance: if a TCP FIN is received from remote and later a TCP RST because we continue to send data,
	FIN cause is saved and not overwritten)
	Note: also in case of <b><closuretype></closuretype></b> ( <b>#SD</b> ) set to 255, if the socket has not yet been closed by user after the escape sequence,
	<b>#SLASTCLOSURE</b> indicates remote disconnection cause if it has been received.
	Note: in case of UDP, cause 2 indicates abnormal(local) disconnection. Cause 3 and 4 are still possible. (Cause 1 is obviously never possible)
AT#SLASTCLOSURE=?	Test command reports the supported range for parameter <b><connid></connid></b>

#### 3.5.7.7.29. Open a connection, send data and close connection - #SSENDLINE

#SSENDLINE – Open a connection, send data, close connection SELINT 2		
AT#SSENDLINE= <data></data>	This command permits to open a TCP/UDP co send specified data and close the TCP/UDP co The remote host/port of the connection have to specified with <b>#IPCONSUMECFG</b> command	onnection. b be previously

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 466 of 717

	Parameters: <data> - text to send, shall be enclosed between double quotes.         Note: maximum allowed amount of data is 380 octets         Note: in case of UDP obviously only local opening/closure is done, datagram is sent with <data> contained in the payload.</data></data>
AT#SSENDLINE=?	Test command reports the supported range of values for parameters
Example	at+cgdcont=1,"IP","APN" OK at#ipconsumecfg=1,0,"remoteHost",remotePort OK // Socket with <connid> 1 will be used by #ssendline; // TCP will be the transmission protocol; // connection will be opened with "remoteHost"/remotePort at#sgact=1,1 #SGACT: xxx.xxx.xxx OK at#ssendline="test sample" // TCP connection with "remoteHost"/remotePort is opened , // data between double quotes are sent, // then TCP connection is closed OK</connid>

## 3.5.7.7.30. #SGACT and #SSENDLINE configuration - #IPCONSUMECFG

#IPCONSUMECFG – #SGACT/#SSENDLINE configuration SELINT 2	
AT#IPCONSUMECFG=	This command configures <b>#SGACT</b> authentication and <b>#SSENDLINE</b>
[ <connid></connid>	connection parameters.
[, <txprot></txprot>	
[, <remotehost></remotehost>	Parameters:
[, <remoteport></remoteport>	
[, <authimei iccidena=""></authimei>	Following settings take effect on successive #SSENDLINE
[, <unused_a></unused_a>	command:
[, <unused_b></unused_b>	
[, <unused_c></unused_c>	<connid>: - socket connection identifier</connid>
11111111	1(default)6
	Note: verify <b><connid></connid></b> is currently available(i.e: not already connected)
	by multisocket commands( <b>#SD</b> , <b>#SL</b> ,) before entering successive
	#SSENDLINE command

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 467 of 717

	<txprot> - transmission protocol0 - TCP(default)1 - UDP<remotehost> - address of the remote host, string type.This parameter can be either:- any valid IP address in the format: "xxx.xxx.xxx."- any host name to be solved with a DNS query.Default ""<remoteport> - remote host port to contact1.65535Default 1024Following setting takes effect on successive #SGACT command:<authimei iccidena=""> - enables PDP context activation(#SGACT) authentication(user/pwd) with ICCID/IMEI0 - disable #SGACT authentication with MEI/ICCID asuser/pwd(default)1 - enable #SGACT authentication with with IMEI/ICCID as user/pwdNote: <authimei iccidena=""> setting takes effect when successive#SGACT not indicating <userid> and <pwd> will be usedNote: the values set by command are directly stored in NVM and doesn'tdepend on the specific CMUX instance.</pwd></userid></authimei></authimei></remoteport></remotehost></txprot>
AT#IPCONSUMECFG?	Read command reports the currently configuration parameters in the format: #IPCONSUMECFG: <connid>,<txprot>,<remotehost> ,<remoteport>,<authimei iccidena="">,&lt;0&gt;,&lt;0&gt;,&lt;0&gt; <cr><lf></lf></cr></authimei></remoteport></remotehost></txprot></connid>
AT#IPCONSUMECFG=?	Test command reports the supported range of values for all the parameters

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

#### **3.5.7.8. FTP AT Commands**

# **3.5.7.8.1.** FTP Time-Out - #FTPTO

<b>#FTPTO - FTP Time</b>	e-Out SELINT 0 / 1
AT#FTPTO[=	Set command sets the time-out used when opening either the FTP control channel
<tout>]</tout>	or the FTP traffic channel.
	Parameter:
	<tout> - time-out in 100 ms units</tout>
	1005000 - hundreds of ms (factory default is 100)
	Note: The parameter is not saved in NVM.
	Note: if parameter <b><tout></tout></b> is omitted the behaviour of Set command is the same as Read command.
AT#FTPTO?	Read command returns the current FTP operations time-out, in the format:
	#FTPTO: <tout></tout>
AT#FTPTO=?	Test command returns the range of supported values for parameter <b><tout></tout></b>

<mark>#FTPTO - FTP Time</mark>	-Out SELINT 2
AT#FTPTO= [ <tout>]</tout>	Set command sets the time-out used when opening either the FTP control channel or the FTP traffic channel.
	Parameter: < <b>tout</b> > - time-out in 100 ms units 1005000 - hundreds of ms (factory default is 100)
	Note: The parameter is not saved in NVM.
AT#FTPTO?	Read command returns the current FTP operations time-out, in the format: #FTPTO: <tout></tout>
AT#FTPTO=?	Test command returns the range of supported values for parameter <b><tout></tout></b>

## **3.5.7.8.2. FTP Open - #FTPOPEN**

<b>#FTPOPEN - FTP O</b>	pen SEI	<mark>.INT 0 / 1</mark>
AT#FTPOPEN=	Execution command opens an FTP connection toward the FTP server.	
<server:port>,</server:port>		
<username>,</username>	Parameters:	
<password>[,</password>	<pre><server:port> - string type, address and port of FTP server (factory default port</server:port></pre>	
<mode>]</mode>		
	<pre><username> - string type, authentication user identification string for</username></pre>	FTP.
	<b><password></password></b> - string type, authentication password for FTP.	
	<mode></mode>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 469 of 717

80000ST10025a Rev. 24 - 2016-09-07

#FTPOPEN - FTP Ope	n	SELINT 0 / 1
	0 - active mode (default)	
	1 - passive mode	
	Note: Before opening an FTP connection the GP activated by <b>AT#GPRS=1</b>	RS context must have been

<b>#FTPOPEN - FTP Ope</b>	en SELINT 2	
AT#FTPOPEN=	Execution command opens an FTP connection toward the FTP server.	
[ <server:port>,</server:port>		
<username>,</username>	Parameters:	
<password>[,</password>	<server:port> - string type, address and port of FTP server (factory default port</server:port>	
<mode>]]</mode>	21).	
	<username> - string type, authentication user identification string for FTP.</username>	
	<pre>&gt;password&gt; - string type, authentication password for FTP.</pre>	
	<mode></mode>	
	0 - active mode (factory default)	
	1 - passive mode	
	Note: Before opening an FTP connection either the GSM context must have been activated by <b>AT#SGACT=0,1</b> or the PDP context #1 must have been activated b <b>AT#SGACT=1,1</b> or by <b>AT#GPRS=1</b>	
AT#FTPOPEN=?	Test command returns the <b>OK</b> result code.	

## 3.5.7.8.3. FTP Close - #FTPCLOSE

<b>#FTPCLOSE - FTP Cl</b>	ose	SELINT 0 / 1
AT#FTPCLOSE	Execution command closes an FTP connection.	
AT#FTPCLOSE?	Read command behavior is the same as Execution command.	

<b>#FTPCLOSE - FTP Cl</b>	<mark>ose</mark>	SELINT 2
AT#FTPCLOSE	Execution command closes an FTP connection.	
AT#FTPCLOSE=?	Test command returns the <b>OK</b> result code.	

# **3.5.7.8.4. FTP Put - #FTPPUT**

<b>#FTPPUT - FTP Put</b>	SELINT 0/1	
AT#FTPPUT= <filename></filename>	Execution command, issued during an FTP connection, opens a data connection and starts sending <b><filename></filename></b> file to the FTP server.	
	If the data connection succeeds, a <b>CONNECT</b> indication is sent, afterward a NO CARRIER indication is sent when the socket is closed.	
	Parameter:	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 470 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#FTPPUT - FTP Put</b>	SELINT 0/1	l
	<filename> - string type, name of the file (maximum length 200 characters) Note: use the escape sequence +++ to close the data connection.</filename>	
	Note: The command causes an <b>ERROR</b> result code to be returned if no FTP co has been opened yet.	nnection
AT#FTPPUT=?	Test command returns the OK result code.	

<b>#FTPPUT - FTP Put</b>	SELINT 2	
AT#FTPPUT= [[ <filename>], [<connmode>]]</connmode></filename>	<ul> <li>Execution command, issued during an FTP connection, opens a data connection a starts sending <filename> file to the FTP server.</filename></li> <li>If the data connection succeeds, a CONNECT indication is sent. afterward a NO CARRIER indication is sent when the socket is closed.</li> <li>Note: if we set <connmode> to 1, the data connection is openedand we remain in</connmode></li> </ul>	
	<pre>command mode and we see the result code OK (instead of CONNECT) Parameters: <filename> - string type, name of the file (maximum length 200 characters)</filename></pre>	
	<connmode> 0 - online mode 1 - command mode</connmode>	
	Note: use the escape sequence +++ to close the data connection.	
	Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.	
	Note: The <connmode> parameter is not available in SW 13.00.xxx.</connmode>	
AT#FTPPUT=?	Test command reports the supported range of values for parameters <b><filename></filename></b> and <b><connmode></connmode></b>	

# **3.5.7.8.5. FTP Get - #FTPGET**

<b>#FTPGET - FTP Get</b>	SELINT 0 / 1	
AT#FTPGET=	Execution command, issued during an FTP connection, opens a data connection and	
<filename></filename>	starts getting a file from the FTP server.	
	If the data connection succeeds a <b>CONNECT</b> indication is sent, otherwise a <b>NO</b>	
	CARRIER indication is sent.	
	The file is received on the serial port.	
	1

<b>#FTPGET - FTP Get</b>		<mark>SELINT 0 / 1</mark>
	Parameter: <b>filename&gt; -</b> file name, string type.	
	Note: The command causes an <b>ERROR</b> result code to be connection has been opened yet.	returned in case no FTP
	Note: Command closure should always be handled by apple download stall situations a timeout should be implemented	

<mark>#FTPGET - FTP Get</mark>		SELINT 2
AT#FTPGET=	Execution command, issued during an FTP connection, opens a d	lata connection and
[ <filename>]</filename>	starts getting a file from the FTP server.	
	If the data connection succeeds a <b>CONNECT</b> indication is sent.	
	The file is received on the serial port.	
	Parameter:	
	<filename> - file name, string type.</filename>	
	Note: The command causes an <b>ERROR</b> result code to be returne connection has been opened yet.	d in case no FTP
	Note: Command closure should always be handled by application download stall situations a timeout should be implemented by the	
AT#FTPGET=?	Test command returns the OK result code.	

## **3.5.7.8.6. FTP GET in command mode - #FTPGETPKT**

<b>#FTPGETPKT - FTP Get</b>	#FTPGETPKT - FTP Get in command mode SELINT 2		
AT#FTPGETPKT=	Execution command, issued during an FTP connection, opens a data connection and		
<filename></filename>	starts getting a file from the FTP server while remaining in command mode.		
[, <viewmode>]</viewmode>			
	The data port is opened and we remain in <b>command mode</b> and we see the result code <b>OK</b> .		
	Retrieval from FTP server of "remotefile" is started, but data are only buffered in the module.		
	It's possible to read data afterwards issuing #FTPRECV command		
	Parameters:		
	<filename> - file name, string type (maximum length: 200 characters).</filename>		
	<viewmode> - permits to choose view mode; numeric parameter:</viewmode>		
	0 – text format (default)		
	1 – hexadecimal format		
	Note: The command causes an <b>ERROR</b> result code to be returned in case no FTP connection has been opened yet.		

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 472 of 717

80000ST10025a Rev. 24 – 2016-09-07

<mark>#FTPGETPKT - FTP G</mark>	et in command mode SELINT 2
	Note: Command closure should always be handled by application. In order to avoid download stall situations a timeout should be implemented by the application.
AT#FTPGETPKT?	Read command reports current download state for <filename> with <viewmode> chosen, in the format:         #FTPGETPKT: <remotefile>,<viewmode>,<eof></eof></viewmode></remotefile></viewmode></filename>
	where <b><eof></eof></b> is a numeric parameter: 0 = file currently being transferred 1 = complete file has been transferred to FTP client
AT#FTPGETPKT=?	Test command returns the OK result code.

#### **3.5.7.8.7.** Receive and store FTP server data - **#FTPGETF**

<b>#FTPGETF – Receive</b>	and store FTP server data	SELINT 2	
AT#FTPGETF=	Execution command, issued during a FTP connection, opens a da	ata connection and	
<src_filename>,</src_filename>	starts downloading a file from the FTP server.		
<dest_filename></dest_filename>	The file is saved into module's file system.		
[, <verbose>]</verbose>			
	Parameter:		
	<src_filename></src_filename>		
	- Name of the file to be downloaded, string type		
	<dest_filename></dest_filename>		
	- Name of the destination file to be written into module's file system, string		
	type (max 16 chars, case sensitive).		
	<verbose></verbose>		
	- 0: Disable verbose mode (default)		
	- 1: Enable verbose mode		
AT#FTPGETF=?	Test command returns the OK result code.		
Note	This command returns an <b>ERROR</b> result code if no FTP connection has been		
	opened yet.		
	Command closure should always be handled by application. A timeout should be implemented by the application in order to avoid download stall situations		
	When verbose mode is enabled, i.e. <b><verbose></verbose></b> is set to 1, the '# printed on the AT command port every time a chunk of data is rewritten.		

# **3.5.7.8.8. FTP Type - #FTPTYPE**

<mark>#FTPTYPE - FTP Type</mark>

<mark>SELINT 0 / 1</mark>

80000ST10025a Rev. 24 - 2016-09-07

<mark>#FTPTYPE - FTP</mark>	Fype   SELINT 0 / 1
AT#FTPTYPE[=	Set command, issued during an FTP connection, sets the file transfer type.
<type>]</type>	
	Parameter:
	<type> - file transfer type:</type>
	0 - binary
	1 - ascii
	Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.
	Note: If the parameter is omitted then the behaviour of Set command is the same of Read command.
#FTPTYPE?	Read command returns the current file transfer type, in the format:
	#FTPTYPE: <type></type>
#FTPTYPE=?	Test command returns the range of available values for parameter <b><type></type></b> :
	#FTPTYPE: (0,1)

<mark>#FTPTYPE - FTP T</mark>	ype SELINT 2
AT#FTPTYPE=	Set command, issued during an FTP connection, sets the file transfer type.
[ <type>]</type>	
	Parameter:
	<type> - file transfer type:</type>
	0 - binary
	1 - ascii
	Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.
<b>#FTPTYPE?</b>	Read command returns the current file transfer type, in the format:
	#FTPTYPE: <type></type>
#FTPTYPE=?	Test command returns the range of available values for parameter <b><type></type></b> :
	#FTPTYPE: (0,1)

# 3.5.7.8.9. FTP Read Message - #FTPMSG

<b>#FTPMSG - FTP Read</b>	Message	SELINT 0/1
AT#FTPMSG	Execution command returns the last response from the server.	
AT#FTPMSG?	Read command behaviour is the same as Execution command.	

<b>#FTPMSG - FTP Read</b>	Message	<mark>SELINT 2</mark>
AT#FTPMSG	Execution command returns the last response from the server.	
AT#FTPMSG=?	Test command returns the <b>OK</b> result code.

<mark>#FTPLIST - FTP List</mark>		<mark>SELINT 0 / 1</mark>
AT#FTPLIST[= <name>]</name>	Execution command, issued during an FTP connection, opens a c starts getting from the server the list of contents of the specifi properties of the specified file.	
	Parameter: < <b>name&gt;</b> - string type, it's the name of the directory or file. Note: The command causes an <b>ERROR</b> result code to be r	eturned if no FTP
	connection has been opened yet. Note: issuing <b>AT#FTPLIST<cr></cr></b> opens a data connection and the server the list of contents of the working directory.	starts getting from

<mark>#FTPLIST - FTP List</mark>	SELINT 2
AT#FTPLIST[= [ <name>]]</name>	Execution command, issued during an FTP connection, opens a data connection and starts getting from the server the list of contents of the specified directory or the properties of the specified file.
	Parameter: <name> - string type, it's the name of the directory or file.</name>
	Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.
	Note: issuing <b>AT#FTPLIST<cr></cr></b> opens a data connection and starts getting from the server the list of contents of the working directory.
AT#FTPLIST=?	Test command returns the <b>OK</b> result code.

## **3.5.7.8.14.** Get file size - **#FTPFSIZE**

<b>#FTPFSIZE – Get file</b>	size from FTP server	<mark>SELINT 2</mark>
AT#FTPFSIZE=	Execution command, issued during an FTP connection, permits to	o get file size of
<filename></filename>	<filename> file.</filename>	
	Note: FTPTYPE=0 command has to be issued before FTPFSIZE comm transfer type to binary mode.	and, to set file
AT# FTPFSIZE=?	Test command returns the OK result code.	

# 3.5.7.8.15. FTP Append - #FTPAPP

#FTPAPP - FTP Append SELINT 2	
AT#FTPAPP=	Execution command, issued during an FTP connection, opens a data connection and
[[ <filename>],</filename>	append data to existing <filename> file.</filename>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 477 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#FTPAPP - FTP A</b>	opend SELINT 2
<connmode>]</connmode>	If the data connection succeeds, a <b>CONNECT</b> indication is sent, afterward a NO CARRIER indication is sent when the socket is closed. Note: if we set <b><connmode></connmode></b> to 1, the data connection is openedand we remain in command mode and we see the result code <b>OK</b> (instead of <b>CONNECT</b> )
	Parameter: < <b>filename</b> > - string type, name of the file. < <b>connMode&gt;</b> 0 - online mode 1 - command mode
	Note: use the escape sequence +++ to close the data connection. Note: The command causes an <b>ERROR</b> result code to be returned if no FTP connection has been opened yet.
AT#FTPAPP=?	Note: The <connmode> parameter is not available in SW 13.00.xxx.         Test command reports the supported range of values for parameters         <b>connMode&gt;</b></connmode>

## 3.5.7.8.16. Send data on a FTP data port while the module is in command mode - #FTPAPPEXT

<b>#FTPAPPEXT</b> – send data on a	FTP data port while the module is in command mode SELINT 2
AT#FTPAPPEXT=	This command permits to send data on a FTP data port while
 bytestosend>[,< eof >]	the module is in command mode.
	FTP data port has to be previously opened through <b>#FTPPUT</b>
	(or <b>#FTPAPP</b> ) with <b><connmode></connmode></b> parameter set to command mode
	connection.
	Parameters:
	< bytestosend > - number of bytes to be sent
	11500
	<eof> - data port closure</eof>
	0 – normal sending of data chunk
	1 – close data port after sending data chunk
	The device responds to the command with the prompt
	<pre><greater_than><space> and waits for the data to send.</space></greater_than></pre>

#### AT Commands Reference Guide 80000ST10025a Rev. 24 – 2016-09-07

and OK is returned #FTPAPPEXT: <sentbytes> OK</sentbytes>
<pre>// If the user has to reopen the data port to send another // (or append to the same) file, he can restart with the // FTPPUT(or FTPAPP.) //Then FTPAPPEXT, to send the data chunks on the //reopened data port.</pre>
<pre>// Note: if while sending the chunks the data port is closed // from remote, user will be aware of it because #FTPAPPEXT // will indicate ERROR and cause (available if previously //issued the command AT+CMEE=2) will indicate that //socket has been closed. // Also in this case obviously, data port will have to be //reopened with FTPPUT and so on(same sequence)</pre>

# 3.5.7.8.17. Set restart position - # FTPREST

<mark>#FTPREST – Set rest</mark>	art position for FTP GET SELINT 2	
AT#FTPREST=	Set command sets the restart position for successive FTPGET	
<restartposition></restartposition>	(or FTPGETPKT) command.	
	It permits to restart a previously interrupted FTP download from the selected position in byte.	
	Parameter: <restartposition> position in byte of restarting for successive FTPGET FTPGETPKT) (4)</restartposition>	or
	Note: It's necessary to issue FTPTYPE=0 before successive FTPGET (or FTPGETPKT command) to set binary file transfer type.	
	Note: Setting <restartposition> has effect on successive FTP download. After successive successfully initiated FTPGET(or FTPGETPKT) command <restartposition> is automatically reset.</restartposition></restartposition>	
	Note: value set for <restartposition> has effect on next data transfer(data port opened by FTPGET or FTPGETPKT). Then <restartposition> value is automatically assigned to 0 for next download.</restartposition></restartposition>	

80000ST10025a Rev. 24 - 2016-09-07

#FTPREST – Set resta	rt position for FTP GET	SELINT 2
AT# FTPREST?	Read command returns the current <restartposition></restartposition>	
	#FTPREST: <restartposition></restartposition>	
AT# FTPREST=?	Test command returns the OK result code.	

# **3.5.7.8.18.** Receive Data In Command Mode - #FTPRECV

<b>#FTPRECV – Receive</b>	2 Data In Command Mode SELINT 2
<mark>#FTPRECV – Receive</mark> AT#FTPRECV= <blocksize></blocksize>	E Data In Command Mode       SELINT 2         Execution command permits the user to transfer at most <blocksize> bytes of remote file, provided that retrieving from the FTP server has been started with a previous #FTPGETPKT command, onto the serial port.         This number is limited to the current number of bytes of the remote file which have been transferred from the FTP server.         Parameters:         &lt; blocksize &gt; - max number of bytes to read         13000         Note: it's necessary to have previously opened FTP data port and started download and buffering of remote file through #FTPGETPKT command         Note: issuing #FTPRECV when there's no FTP data port opened raises an error.</blocksize>
AT# FTPRECV?	raises an error.         Note: data port will stay opened if socket is temporary waiting to receive data(FTPRECV returns 0 and FTPGETPKT gives a EOF 0 indication).         Read command reports the number of bytes currently received from FTP server, in the format:         #FTPRECV: <available></available>
AT# FTPRECV=?	Test command returns the range of supported values for

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 481 of 717

80000ST10025a Rev. 24 - 2016-09-07

#FTPRECV -	- Receive Data In Command Mode SELINT 2
	<body> <blocksize> parameter.</blocksize></body>
Example	AT#FTPRECV? #FTPRECV: 3000 OK
	Read required part of the buffered data:
	AT#FTPRECV=400 #FTPRECV: 400
	Text row number 1 * 11111111111111111111111111111 Text row number 2 * 222222222222222222222222222222222
	ОК
	AT#FTPRECV =200 #FTPRECV: 200 88888 * Text row number 9 * 999999999999999999999999999999999
	ОК
	Note: to check when you have received complete file it's possible to use AT#FTPGETPKT read command:

# **3.5.7.8.19.** FTP configuration - **#**FTPCFG

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 482 of 717

80000ST10025a Rev. 24 – 2016-09-07

<pre>#FTPCFG - ftp configuration</pre>	SELINT 2
AT#FTPCFG= <tout>,<ippign< th=""><th><tout> - time-out in 100 ms units</tout></th></ippign<></tout>	<tout> - time-out in 100 ms units</tout>
oring>[, <ftpsen></ftpsen>	1005000 - hundreds of ms (factory default is 100)
, <ftpsendsize>]</ftpsendsize>	Set command sets the time-out used when opening either the FTP control channel or the FTP traffic channel.
	Note: The parameter is not saved in NVM.
	<ippignoring> 0: No IP Private ignoring. During a FTP passive mode connection client uses the IP address received from server, even if it is a private IPV4 address.</ippignoring>
	1: IP Private ignoring enabled. During a FTP passive mode connection if the server sends a private IPV4 address the client doesn't consider this and connects with server using the IP address used in AT#FTPOPEN.
	Note: obviously during a FTP active mode connection, parameter doesn't take effect because it has no meaning.
	<ul> <li>[,<ftpsen>]</ftpsen></li> <li>0 – Disable FTPS security: all FTP commands will perform plain FTP connections.</li> <li>1 – Enable FTPS security: from now on any FTP session opened through FTP commands will be compliant to FTPS protocol, providing authentication and encrypted communication.</li> </ul>
	<b>FTPSendSize&gt;</b> - send size to be used by the TCP/IP stack for data sending. It takes effect on send size when FTP upload in online mode is running.
	Send is not called until < <b>FTPSendSize</b> > bytes are reached, unless internal transmission timer(5 sec) expires.
	0 - select automatically default value(300) 1 - 1500 - send size in bytes.
	Note: in order to maintain retrocompatibility, read command (AT#FTPCFG?) doesn't show this parameter until it is set.
	Once it is set, read command includes it in the response no matter if later it is included or not in set command.
	Note: in FTPS mode, FTP commands response time is generally bigger than in normal FTP mode. This latency is mainly due to the SSL handshake that has to be done at the opening of the FTP session (#FTPOPEN) and whenever a data exchange is required (#FTPPUT,

**AT Commands Reference Guide** 80000ST10025a Rev. 24 – 2016-09-07

# 3.5.7.9. Enhanced IP Easy Extension AT Commands

# 3.5.7.9.1. Authentication User ID - #USERID

<b>#USERID - Authentica</b>	ation User ID SELINT 0 / 1
AT#USERID	Set command sets the user identification string to be used during the authentication
[= <user>]</user>	step.
	<ul> <li>Parameter:</li> <li><user> - string type, it's the authentication User Id; the max length for this value is the output of Test command, AT#USERID=? (factory default is the empty string "").</user></li> <li>Note: If parameter is omitted then the behaviour of Set command is the same of Read command.</li> </ul>
AT#USERID?	Read command reports the current user identification string, in the format:
	#USERID: <user>.</user>
AT#USERID=?	Test command returns the maximum allowed length of the string parameter <b><user></user></b> .
Example	AT#USERID="myName" OK AT#USERID? #USERID: "myName"
	OK

<b>#USERID - Authentic</b>	ation User ID SELINT 2
AT#USERID=	Set command sets the user identification string to be used during the authentication
[ <user>]</user>	step.
	Parameter: <user> - string type, it's the authentication User Id; the max length for this value is the output of Test command, AT#USERID=? (factory default is the empty string "").</user>
	Note: this command is not allowed for sockets associated to a GSM context (see <b>#SCFG</b> ).
AT#USERID?	Read command reports the current user identification string, in the format: #USERID: <user></user>
AT#USERID=?	Test command returns the maximum allowed length of the string parameter <b><user></user></b> .
Example	AT#USERID="myName" OK AT#USERID? #USERID: "myName" OK

80000ST10025a Rev. 24 - 2016-09-07

### 3.5.7.9.2. Authentication Password - #PASSW

<b>#PASSW - Authent</b>	tication Password SEL	<mark>INT 0/1</mark>
AT#PASSW=	Set command sets the user password string to be used during the a	authentication
<pwd></pwd>	step.	
	Parameter:	
	<pre><pwd> - string type, it's the authentication password; the max length</pwd></pre>	
	is the output of Test command, AT#PASSW=? (factory	default is the
	empty string "").	
AT#PASSW=?	Test command returns the maximum allowed length of the string parar	meter <b><pwd></pwd></b> .
Example	AT#PASSW="myPassword"	
1 I	OK	

<b>#PASSW - Authentic</b>	cation Password SELINT 2	
AT#PASSW=	Set command sets the user password string to be used during the authentication	
[ <pwd>]</pwd>	step.	
	<pre>Parameter: <pwd> - string type, it's the authentication password; the max length for this value is the output of Test command, AT#PASSW=? (factory default is the empty string "").</pwd></pre>	
	Note: this command is not allowed for sockets associated to a GSM context (see <b>#SCFG</b> ).	
AT#PASSW=?	Test command returns the maximum allowed length of the string parameter <pwd></pwd>	
Example	AT#PASSW="myPassword" OK	
Елатріс	OK	

# 3.5.7.9.3. Packet Size - #PKTSZ

<mark>#PKTSZ - Packet Size</mark>	SELINT 0 / 1	
AT#PKTSZ[=	Set command sets the default packet size to be used by the TCP/UDP/IP stack for	or
[ <size>]]</size>	data sending.	
	Parameter:	
	<size> - packet size in bytes</size>	
	0 - automatically chosen by the device	
	1512 - packet size in bytes (factory default is 300)	
	Note: issuing <b>AT#PKTSZ<cr></cr></b> is the same as issuing the Read command.	
	Note: issuing <b>AT#PKTSZ=</b> < <b>CR</b> > is the same as issuing the command <b>AT#PKTSZ=0</b> < <b>CR</b> >.	d
AT#PKTSZ?	Read command reports the current packet size value.	
	Note: after issuing command <b>AT#PKTSZ=0</b> , the Read command reports the valu automatically chosen by the device.	ie

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 486 of 717

80000ST10025a Rev. 24 - 2016-09-07

<mark>#PKTSZ - Packet Size</mark>		<mark>SELINT 0 / 1</mark>
AT#PKTSZ=?	Test command returns the allowed values for the parameter <size></size>	<b>&gt;</b> .
Example	AT#PKTSZ=100	
-	OK	
	AT#PKTSZ?	
	#PKTSZ: 100	
	OK	
	AT#PKTSZ=0	
	OK	
	AT#PKTSZ?	
	#PKTSZ: 300 ->value automatically chosen by device	
	OK	

	CEL INTE A
<b>#PKTSZ - Packet Size</b>	SELINT 2
AT#PKTSZ= [ <size>]</size>	Set command sets the default packet size to be used by the TCP/UDP/IP stack for data sending.
	Parameter: <size> - packet size in bytes 0 - automatically chosen by the device 11500 - packet size in bytes (factory default is 300) Note: this command is not allowed for sockets associated to a GSM context (see #SCFG).</size>
AT#PKTSZ?	Read command reports the current packet size value. Note: after issuing command <b>AT#PKTSZ=0</b> , the Read command reports the value automatically chosen by the device.
AT#PKTSZ=?	Test command returns the allowed values for the parameter <b><size></size></b> .
Example	AT#PKTSZ=100 OK AT#PKTSZ? #PKTSZ: 100 OK AT#PKTSZ=0 OK AT#PKTSZ? #PKTSZ: 300 ->value automatically chosen by device
	OK

# 3.5.7.9.4. Data Sending Time-Out - #DSTO

<b>#DSTO - Data Sending</b>	, Time-Out	<mark>SELINT 0 / 1</mark>
AT#DSTO[=	Set command sets the maximum time that the module aw	aits before sending
[ <tout>]]</tout>	anyway a packet whose size is less than the default one.	
	Parameter:	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 487 of 717

80000ST10025a Rev. 24 – 2016-09-07

<b>#DSTO - Data Sendi</b>	ng Time-Out SELINT	<mark>0 / 1</mark>
<tout> - packet sending time-out in 100ms units (factory default is 50) 0 - no time-out, wait forever for packets to be completed before send.</tout>		
	1255 hundreds of ms	
	Note: In order to avoid low performance issues, it is suggested to set sending time-out to a value greater than 5.	the data
	Note: this time-out applies to data whose size is less than packet size and whose sending would have been delayed for an undefined time until new data to be sent had been received and full packet size reached.	
	Note: issuing <b>AT#DSTO<cr></cr></b> is the same as issuing the Read command.	
	Note: issuing <b>AT#DSTO=</b> < <b>CR</b> > is the same as issuing the <b>C</b> <b>AT#DSTO=0</b> < <b>CR</b> >.	command
AT#DSTO?	Read command reports the current data sending time-out value.	
AT#DSTO=?	Test command returns the allowed values for the parameter <b><tout></tout></b> .	
Example	AT#DSTO=10 ->1 sec. time-out	
<u>^</u>	OK	
	AT#DSTO? #DSTO: 10	
	OK	

<b>#DSTO -Data Sending</b>	Time-Out	SELINT 2
AT#DSTO=	Set command sets the maximum time that the module awaits bef	ore sending
[ <tout>]</tout>	anyway a packet whose size is less than the default one.	-
	Parameter: <tout> - packet sending time-out in 100ms units (factory default 0 - no time-out, wait forever for packets to be completed before 1255 hundreds of ms</tout>	<i>,</i>
	Note: In order to avoid low performance issues, it is suggested to sending time-out to a value greater than 5.	set the data
	Note: this time-out applies to data whose size is less than packet sending would have been delayed for an undefined time until new had been received and full packet size reached.	
	Note: this command is not allowed for sockets associated to a GS <b>#SCFG</b> ).	SM context (see
AT#DSTO?	Read command reports the current data sending time-out value.	
AT#DSTO=?	Test command returns the allowed values for the parameter <tou< th=""><th>ıt&gt;.</th></tou<>	ıt>.
Example	AT#DSTO=10 ->1 sec. time-out OK AT#DSTO? #DSTO: 10

<b>#SKTSET - Socket Def</b>	inition	SELINT 0 / 1
	Note: If all parameters are omitted then the behaviour of Set com as Read command.	nmand is the same
AT#SKTSET?	Read command reports the socket parameters values, in the form AT#SKTSET: <socket type="">,<remote port="">,<remote addr="">,</remote></remote></socket>	at:
	<closure type="">,<local port=""></local></closure>	
AT#SKTSET=?	Test command returns the allowed values for the parameters.	
Example	AT#SKTSET=0,1024,"123.255.020.001" OK AT#SKTSET=0,1024,"www.telit.net" OK	
Note	Issuing command #QDNS will overwrite <remote addr=""> setting</remote>	<u>y</u> .

#SKTSET - Socket I	Definition SELINT 2
AT#SKTSET=	Set command sets the socket parameters values.
[ <socket type="">,</socket>	
<remote port="">,</remote>	Parameters:
<remote addr="">,</remote>	<socket type=""> - socket protocol type</socket>
[ <closure type="">],</closure>	0 - TCP (factory default)
[ <local port="">]]</local>	1 - UDP
	<remote port=""> - remote host port to be opened</remote>
	065535 - port number (factory default is 3333)
	<remote addr=""> - address of the remote host, string type. This parameter can be either:</remote>
	- any valid IP address in the format: xxx.xxx.xxx
	- any host name to be solved with a DNS query in the format: <host name=""></host>
	(factory default is the empty string "")
	<closure type=""> - socket closure behaviour for TCP when remote host has closed</closure>
	0 - local host closes immediately (default)
	255 - local host closes after an escape sequence (+++) or immediately in case of a abortive disconnect from remote.
	<li>local port&gt; - local host port to be used on UDP socket</li>
	065535 - port number
	Note: <b><closure type=""></closure></b> parameter is valid only for TCP socket type, for UDP socket shall be left unused.
	Note: <b><local port=""></local></b> parameter is valid only for UDP socket type, for TCP sockets shall be left unused.
	Note: The resolution of the host name is done when opening the socket, therefore is an invalid host name is given to the <b>#SKTSET</b> command, then an error message will be issued.
	Note: the DNS Query to be successful requests that: - the GPRS context 1 is correctly set with +CGDCONT

80000ST10025a Rev. 24 – 2016-09-07

#SKTSET - Socket	Definition SELINT 2	
	<ul> <li>the authentication parameters are set (#USERID, #PASSW)</li> <li>the GPRS coverage is enough to permit a connection.</li> <li>Note: this command is not allowed for sockets associated to a GSM context (#SCFG).</li> </ul>	(see
AT#SKTSET?	Read command reports the socket parameters values, in the format: <b>AT#SKTSET:</b> <socket type="">,<remote port="">,<remote addr="">, <closure type="">,<local port=""></local></closure></remote></remote></socket>	
AT#SKTSET=?	Test command returns the allowed values for the parameters.	
Example	AT#SKTSET=0,1024,"123.255.020.001" OK AT#SKTSET=0,1024,"www.telit.net" OK	
Note	Issuing command <b>#QDNS</b> will overwrite <b><remote addr=""></remote></b> setting.	

# 3.5.7.9.7. Socket Open - #SKTOP

#SKTOP - Socket Oper	1 SELINT 0 / 1
AT#SKTOP	Execution command activates the context number 1, proceeds with the authentication with the user ID and password previously set by <b>#USERID</b> and <b>#PASSW</b> commands, and opens a socket connection with the host specified in the <b>#SKTSET</b> command. Eventually, before opening the socket connection, it issues automatically a DNS query to solve the IP address of the host name. If the connection succeeds a <b>CONNECT</b> indication is sent, otherwise a <b>NO CARRIER</b> indication is sent.
AT#SKTOP?	Read command behaviour is the same as Execution command.
Example	AT#SKTOP GPRS context activation, authentication and socket open CONNECT

<b>#SKTOP - Socket Open</b>	1 SELINT 2
AT#SKTOP	Execution command activates the context number 1, proceeds with the authentication with the user ID and password previously set by <b>#USERID</b> and <b>#PASSW</b> commands, and opens a socket connection with the host specified in the <b>#SKTSET</b> command. Eventually, before opening the socket connection, it issues automatically a DNS query to solve the IP address of the host name. If the connection succeeds a <b>CONNECT</b> indication is sent, otherwise a <b>NO</b> <b>CARRIER</b> indication is sent. Note: this command is not allowed for sockets associated to a GSM context (see
	#SCFG).
AT#SKTOP=?	Test command returns the <b>OK</b> result code.
Example	AT#SKTOP GPRS context activation, authentication and socket open CONNECT

80000ST10025a Rev. 24 - 2016-09-07

<b>#QDNS - Query DNS</b>	SELINT 2
	activated. In this case the context is deactivated after the DNS query. It also works with GSM context, but the GSM context has to be activated before.
AT#QDNS=?	Test command returns the <b>OK</b> result code.
Note	This command requires that the authentication parameters are correctly set and that the GPRS network is present (or GSM, if GSM context is used).
Note	Issuing command <b>#QDNS</b> will overwrite <b><remote addr=""></remote></b> setting for command <b>#SKTSET</b> .
Note	This command is available only on the first virtual port of CMUX and works on the PDP context 1 and on the first ConnId ( see AT#SCFG )

# 3.5.7.9.9. DNS Response Caching - #CACHEDNS

<mark>#CACHEDNS –</mark> DNS	Response Caching SELINT 2
AT#CACHEDNS= [ <mode>]</mode>	Set command enables caching a mapping of domain names to IP addresses, as does a resolver library.
	Parameter: <b>mode&gt;</b> 0 - caching disabled; it cleans the cache too 1 - caching enabled
	Note: the validity period of each cached entry (i.e. how long a DNS response remains valid) is determined by a value called the <b>Time To Live</b> ( <b>TTL</b> ), set by the administrator of the DNS server handing out the response.
	Note: If the cache is full (8 elements) and a new IP address is resolved, an element is deleted from the cache: the one that has not been used for the longest time.
	Note: it is recommended to clean the cache, if command +CCLK has been issued while the DNS Response Caching was enabled.
AT#CACHEDNS?	Read command reports whether the DNS Response Caching is currently enabled or not, in the format:
	#CACHEDNS: <mode></mode>
AT#CACHEDNS=?	Test command returns the currently cached mapping along with the range of available values for parameter <b><mode></mode></b> , in the format:
	#CACHEDNS: [ <hostn1>,<ipaddr1>,[,[<hostnn>,<ipaddrn>,]]](0,1)</ipaddrn></hostnn></ipaddr1></hostn1>
	where: <hostnn> - hostname, string type <ipaddrn> - IP address, string type, in the format "xxx.xxx.xxx"</ipaddrn></hostnn>

3.5.7.9.10. Manual DNS Selection - #DNS

<b>#DNS – Manual DN</b>	S Selection SELINT 2	
AT#DNS= <cid>, <primary>, <secondary></secondary></primary></cid>	>, Set command allows to manually set primary and secondary DNS servers either for a PDP context defined by +CGDCONT or for a GSM context defined by #GSMCONT	
	<ul> <li>Parameters:</li> <li><cid> - context identifier</cid></li> <li>0 - specifies the GSM context</li> <li>15 - numeric parameter which specifies a particular PDP context definition</li> <li><primary> - manual primary DNS server, string type, in the format</primary></li> <li>"xxx.xxx.xxx" used for the specified cid; we're using this value instead of the primary DNS server come from the network (default "0.0.0.0")</li> <li><secondary> - manual secondary DNS server, string type, in the format</secondary></li> <li>"xxx.xxx.xxx" used for the specified cid; we're using this value instead of the secondary DNS server come from the network (default "used for the specified cid; we're using this value instead of the secondary DNS server come from the network (default is "0.0.0.0").</li> </ul>	is
	Note: if <b><primary> is "0.0.0.0"</primary></b> and <b><secondary> is not "0.0.0.0"</secondary></b> , then issuing <b>AT#DNS=</b> raises an error.	
	Note: if <b><primary> is "0.0.0.0"</primary></b> we're using the <b>primary DNS server</b> come from the network as consequence of a context activation.	
	Note: if <b><primary> is not "0.0.0.0"</primary></b> and <b><secondary> is "0.0.0.0"</secondary></b> , then we're using only the <b>manual primary DNS server</b> .	
	Note: the context identified by <b><cid></cid></b> has to be previously defined, elsewhere issuing <b>AT#DNS=</b> raises an error.	
	Note: the context identified by <b><cid></cid></b> has to be not activated yet, elsewhere issuing <b>AT#DNS=</b> raises an error.	, ,
AT#DNS?	Read command returns the manual DNS servers set either for every defined PDP context and for the single GSM context (only if defined), in the format:	_
	[#DNS: <cid>,<primary>,<secondary>[<cr><lf> #DNS: <cid>,<primary>,<secondary>]]</secondary></primary></cid></lf></cr></secondary></primary></cid>	
AT#DNS=?	Test command reports the supported range of values for the <b><cid></cid></b> parameter.only, in the format:	
	#DNS: (0-5),,

3.5.7.9.11.	DNS from Network - #NWDNS
-------------	---------------------------

<mark>#NWDNS – DNS fro</mark> i	n Network	SELINT 2
AT#NWDNS= [ <cid>[,<cid> [,]]]</cid></cid>	Execution command returns either the primary and secondary GSM context (if specified) and/or a list of primary and second the specified PDP context identifiers	
	<ul> <li>Parameters:</li> <li><cid> - context identifier</cid></li> <li>0 - specifies the GSM context (see +GSMCONT).</li> <li>15 - numeric parameter which specifies a particular PDP con +CGDCONT command).</li> <li>Note: if no <cid> is specified, the DNS addresses for all defined</cid></li> </ul>	
	Note: issuing the command with more than 6 parameters raises Note: the command returns only one row of information for every even if the same <b><cid></cid></b> is present more than once.	
	The command returns a row of information for every specified has been already defined. No row is returned for a <b><cid></cid></b> whos defined yet. Response format is:	
	#NWDNS: <cid>,<pdnsaddress>,<sdnsaddress>[<cr>&lt; #NWDNS: <cid>,<pdnsaddress>,<sdnsaddress> []]</sdnsaddress></pdnsaddress></cid></cr></sdnsaddress></pdnsaddress></cid>	<lf></lf>
	where: <cid> - context identifier, as before <pdnsaddress>,<sdnsaddress> - primary and secondary D through AT#DNS command. If not set, they a secondary DNS addresses assigned during the activation.</sdnsaddress></pdnsaddress></cid>	re the primary and
AT#NWDNS=?	Test command returns a list of defined <b><cid></cid></b> s.	

## 3.5.7.9.12. Socket TCP Connection Time-Out - #SKTCT

<b>#SKTCT - Socket TCP</b>	Connection Time-Out	SELINT 0 / 1
AT#SKTCT[= <tout>]</tout>	Set command sets the TCP connection time-out for the first from the TCP peer to be received.	CONNECT answer
	Parameter: <tout> - TCP first CONNECT answer time-out in 100ms units 101200 - hundreds of ms (factory default value is 600).</tout>	

80000ST10025a Rev. 24 - 2016-09-07

<b>#SKTCT - Socket TCP</b>	Connection Time-Out SELINT 0 / 1	
	Note: this time-out applies only to the time that the TCP stack waits for the	le
	<b>CONNECT</b> answer to its connection request.	
	Note: The time for activate the GPRS and resolving the name with the DNS query (if the peer was specified by name and not by address) is not counted in this time out.	
	Note: if parameter is omitted then the behaviour of Set command is the same a	IS
	Read command.	
AT#SKTCT?	Read command reports the current TCP connection time-out.	
AT#SKTCT=?	Test command returns the allowed values for parameter <b><tout></tout></b> .	
Example	AT#SKTCT=600	
_	OK	
	socket first connection answer time-out has been set to 60 s.	

<b>#SKTCT - Socket T</b>	CP Connection Time-Out SELINT 2
AT#SKTCT= [ <tout>]</tout>	Set command sets the TCP connection time-out for the first <b>CONNECT</b> answer from the TCP peer to be received.
	Parameter: <b><tout></tout></b> - TCP first <b>CONNECT</b> answer time-out in 100ms units 101200 - hundreds of ms (factory default value is 600).
	Note: this time-out applies only to the time that the TCP stack waits for the <b>CONNECT</b> answer to its connection request.
	Note: The time for activate the GPRS and resolving the name with the DNS query (if the peer was specified by name and not by address) is not counted in this time- out.
	Note: this command is not allowed for sockets associated to a GSM context (see <b>#SCFG</b> ).
AT#SKTCT?	Read command reports the current TCP connection time-out.
AT#SKTCT=?	Test command returns the allowed values for parameter <b><tout></tout></b> .
Example	AT#SKTCT=600 OK socket first connection answer time-out has been set to 60 s.

# 3.5.7.9.13. Socket Parameters Save - #SKTSAV

#SKTSAV - Socke	t Parameters Save	SELINT 0 / 1
AT#SKTSAV	Execution command stores the current socket parameters in th	e NVM of the device.
	The socket parameters to store are: - User ID - Password	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 497 of 717

80000ST10025a Rev. 24 - 2016-09-07

<mark>#SKTSAV - Soc</mark>	ket Parameters Save	SELINT 0 / 1
	- Packet Size	
	- Socket Inactivity Time-Out	
	- Data Sending Time-Out	
	- Socket Type (UDP/TCP)	
	- Remote Port	
	- Remote Address	
	- TCP Connection Time-Out	
Example	AT#SKTSAV	
1	OK	
	socket parameters have been saved in NVM	
Note	If some parameters are not previously specified then a default va	alue will be store

#SKTSAV - Socket	Parameters Save SELINT 2
AT#SKTSAV	<ul> <li>Execution command stores the current socket parameters in the NVM of the device.</li> <li>The socket parameters to store are: <ul> <li>User ID</li> <li>Password</li> <li>Packet Size</li> <li>Socket Inactivity Time-Out</li> <li>Data Sending Time-Out</li> <li>Socket Type (UDP/TCP)</li> <li>Remote Port</li> <li>Remote Address</li> <li>TCP Connection Time-Out</li> </ul> </li> <li>Note: this command is not allowed for sockets associated to a GSM context (see #SCFG).</li> </ul>
AT#SKTSAV=?	Test command returns the <b>OK</b> result code.
Example	AT#SKTSAV OK socket parameters have been saved in NVM
Note	If some parameters have not been previously specified then a default value will be stored.

#### 3.5.7.9.14. **Socket Parameters Reset - #SKTRST**

#SKTRST - Socket Parameters Reset		SELINT 0/1	
AT#SKTRST	Execution command resets the socket parameters to the configuration and stores them in the NVM of the device.	"factory default"	
	<ul> <li>The socket parameters to reset are:</li> <li>User ID</li> <li>Password</li> <li>Packet Size</li> <li>Socket Inactivity Time-Out</li> </ul>

#GPRS - GPRS Context Activation SELINT 2		SELINT 2
	OK Now <b>PDP Context</b> #1 has been activated an	nd our IP is 129.137.1.1
	AT#GPRS=0 OK Now <b>PDP Context #1</b> has been deactivated,	<i>IP is lost.</i>
Note	It is strongly recommended to use the same context, deactivate it and interrogate about it	command (e.g. <b>#GPRS</b> ) to activate the

# 3.5.7.9.16. Socket Dial - #SKTD

HELTD Coolert Dial	
<b>#SKTD - Socket Dial</b>	SELINT 0 / 1
AT#SKTD	Set command opens the socket towards the peer specified in the parameters.
[= <socket type="">,</socket>	
<remote port="">,</remote>	Parameters:
<remote addr="">,</remote>	<socket type=""> - socket protocol type</socket>
[ <closure type="">],</closure>	0 - TCP (factory default)
[ <local port="">]]</local>	1 - UDP
	<remote port=""> - remote host port to be opened</remote>
	065535 - port number (factory default is 0)
	<remote addr=""> - address of the remote host, string type. This parameter can be</remote>
	either:
	- any valid IP address in the format: xxx.xxx.xxx
	- any host name to be solved with a DNS query in the format: <b><host name=""></host></b>
	(factory default is the empty string "")
	<closure type=""> - socket closure behaviour for TCP when remote host has closed</closure>
	0 - local host closes immediately (default)
	255 - local host closes after an escape sequence (+++) or immediately in case of an
	abortive disconnect from remote.
	<li>local port&gt; - local host port to be used on UDP socket</li>
	065535 - port number
	Note: <b><closure type=""></closure></b> parameter is valid only for TCP socket type, for UDP sockets
	shall be left unused.
	shuh oo fort uhusou.
	Note: <b><local port=""></local></b> parameter is valid only for UDP socket type, for TCP sockets
	shall be left unused.
	shan be feft unused.
	Note: the resolution of the host name is done when opening the socket, therefore if
	an invalid host name is given to the <b>#SKTD</b> command, then an error message will
	be issued.
	00 155000.
	Note: the command to be successful requests that:
	Note: the command to be successful requests that:
	- the GPRS context 1 is correctly set with +CGDCONT
	- the authentication parameters are set (#USERID, #PASSW) the GPRS
	coverage is enough to permit a connection

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 502 of 717

80000ST10025a Rev. 24 – 2016-09-07

<b>#SKTD - Socket Dia</b>	al SELINT 0 / 1
	- the GPRS has been activated with AT#GPRS=1
	Note: If all parameters are omitted then the behaviour of Set command is the same as Read command.
AT#SKTD?	Read command reports the socket dial parameters values, in the format:
	AT#SKTD: <socket type="">,<remote port="">,<remote addr="">,</remote></remote></socket>
	<closure type="">,<local port=""></local></closure>
AT#SKTD=?	Test command returns the allowed values for the parameters.
Example	AT#SKTD=0,1024,"123.255.020.001",255 CONNECT
	AT#SKTD=1,1024,"123.255.020.001", ,1025 CONNECT
	In this way my local port 1025 is opened to the remote port 1024
	AT#SKTD=0,1024,"www.telit.net", 255 CONNECT
Note	The main difference between this command and <b>#SKTOP</b> is that this command does not interact with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the <b>#GPRS</b> setting, therefore when the connection made with <b>AT#SKTD</b> is closed the context (and hence the local IP address) is maintained.

<b>#SKTD - Socket Dial</b>		SELINT 2
AT#SKTD=	Set command opens the socket towards the peer specified in the	parameters.
[ <socket type="">,</socket>		
<remote port="">,</remote>	Parameters:	
<remote addr="">,</remote>	<socket type=""> - socket protocol type</socket>	
[ <closure type="">],</closure>	0 - TCP (factory default)	
[ <local port="">]]</local>	1 - UDP	
	<remote port=""> - remote host port to be opened</remote>	
	165535 - port number	
	<remote addr=""> - address of the remote host, string type. This pa</remote>	arameter can be
	either:	
	- any valid IP address in the format: xxx.xxx.xxx	
	- any host name to be solved with a DNS query in the fo	ormat: <b><host name=""></host></b>
	(factory default is the empty string "")	
	<closure type=""> - socket closure behaviour for TCP when remote 0 - local host closes immediately (default)</closure>	e host has closed
	255 - local host closes after an escape sequence (+++) or imme abortive disconnect from remote.	diately in case of an
	<li>local port&gt; - local host port to be used on UDP socket</li>	
	065535 - port number	
	Note: <b><closure type=""></closure></b> parameter is valid only for TCP socket typ shall be left unused.	pe, for UDP sockets

80000ST10025a Rev. 24 - 2016-09-07

#SKTD - Socket Dial	SELINT 2
	Note: <b><local port=""></local></b> parameter is valid only for UDP socket type, for TCP sockets shall be left unused.
	Note: the resolution of the host name is done when opening the socket, therefore if an invalid host name is given to the <b>#SKTD</b> command, then an error message will be issued.
	<ul> <li>Note: the command to be successful requests that:</li> <li>the GPRS context 1 is correctly set with +CGDCONT</li> <li>the authentication parameters are set (#USERID, #PASSW) the GPRS coverage is enough to permit a connection</li> <li>the GPRS has been activated with AT#GPRS=1</li> </ul>
	Note: this command is not allowed for sockets associated to a GSM context (see <b>#SCFG</b> ).
AT#SKTD?	Read command reports the socket dial parameters values, in the format:
	AT#SKTD: <socket type="">,<remote port="">,<remote addr="">, <closure type="">,<local port=""></local></closure></remote></remote></socket>
AT#SKTD=?	Test command returns the allowed values for the parameters.
Example	AT#SKTD=0,1024,"123.255.020.001",255 CONNECT
	AT#SKTD=1,1024,"123.255.020.001", ,1025 CONNECT In this way my local port 1025 is opened to the remote port 1024
	AT#SKTD=0,1024,"www.telit.net", 255 CONNECT
Note	The main difference between this command and <b>#SKTOP</b> is that this command does not interact with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the <b>#GPRS</b> setting, therefore when the connection made with <b>#SKTD</b> is closed the context (and hence the local IP address) is maintained.

## 3.5.7.9.17. Socket Listen - #SKTL

<b>#SKTL - Socket Listen</b>	SELINT 0 / 1	
AT#SKTL	Execution command opens/closes the socket listening for connection requests.	
[= <mode>,</mode>		
<socket type="">,</socket>	Parameters:	
<input port=""/> ,	<mode> - socket mode</mode>	
[ <closure type="">]]</closure>	0 - closes socket listening	
. –	1 - starts socket listening	
	<socket type=""> - socket protocol type</socket>	
	0 - TCP	
	<input port=""/> - local host input port to be listened	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 504 of 717

80000ST10025a Rev. 24 - 2016-09-07

#SKTL - Socket Listen	SELINT (	)/1
	065535 - port number	
	<closure type=""> - socket closure behaviour for TCP when remote host has cl 0 - local host closes immediately (default)</closure>	osed
	255 - local host closes after an escape sequence (+++) or immediately in ca abortive disconnect from remote.	ise of an
	Command returns the <b>OK</b> result code if successful.	
	<ul> <li>Note: the command to be successful requests that:</li> <li>the GPRS context 1 is correctly set with +CGDCONT</li> <li>the authentication parameters are set (#USERID, #PASSW)</li> <li>the GPRS coverage is enough to permit a connection</li> <li>the GPRS has been activated with AT#GPRS=1</li> </ul>	
	When a connection request comes on the input port, if the sender is not filter the internal firewall (see command <b>#FRWL</b> ), an unsolicited code is reported	-
	+CONN FROM: <remote addr=""></remote>	
	Where:	
	<pre><remote addr=""> - host address of the remote machine that contacted the</remote></pre>	device.
	When the connection is established the <b>CONNECT</b> indication is given and modem goes into data transfer mode.	the
	On connection close or when context is closed with <b>#GPRS=0</b> the socket is and no listen is anymore active.	closed
	If the context is closed by the network while in listening, the socket is closed listen is anymore active and an unsolicited code is reported:	l, no
	#SKTL: ABORTED	
	Note: if all parameters are omitted the command returns the current socket lis status and the last settings of parameters <input port=""/> and <closure type="">, format:</closure>	
	<b>#SKTL:</b> < <b>status</b> >,< <b>input port</b> >,< <b>closure type</b> > where	
	<pre><status> - socket listening status 0 - socket not listening 1 - socket listening</status></pre>	
AT#SKTL?	Read command has the same effect as Execution command when parameters omitted.	s are
AT#SKTL=?	Test command returns the allowed values for parameters <b><mode></mode></b> , <b><input b="" p<=""/> and <b><closure type=""></closure></b>.</b>	ort>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 505 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#SKTL - Socket Liste</b>	I SELINT 0 / 1
Example	Activate GPRS
	AT#GPRS=1
	+IP: ###.###.####.####
	ОК
	Start listening
	AT#SKTL=1,0,1024
	OK
	or
	AT#SKTL=1,0,1024,255
	OK
	Receive connection requests
	+CONN FROM: 192.164.2.1
	CONNECT
	CONNECT
	exchange data with the remote host
	send escape sequence
	NO CARRIER
	Now listen is not anymore active
	to stan listaning
	to stop listening
	AT#SKTL=0,0,1024, 255 OK
Note	The main difference between this command and the <b>#SKTD</b> is that <b>#SKTL</b> does
Note	
	not contact any peer, nor does any interaction with the GPRS context status, leaving
	it ON or OFF according to the #GPRS setting, therefore when the connection made
	with <b>#SKTL</b> is closed the context (and hence the local IP address) is maintained.
	The improving command @SKTL has been defined.

<b>#SKTL - Socket Listen</b>	SELINT 2
AT#SKTL	Execution command opens/closes the socket listening for connection requests.
=[ <mode>,</mode>	
<socket type="">,</socket>	Parameters:
<input port=""/> ,	<mode> - socket mode</mode>
[ <closure type="">]]</closure>	0 - closes socket listening
	1 - starts socket listening
	<socket type=""> - socket protocol type</socket>
	0 -TCP (default)
	1- UDP
	<input port=""/> - local host input port to be listened
	165535 - port number
	<closure type=""> - socket closure behaviour for TCP when remote host has closed</closure>
	0 - local host closes immediately (default)
	255 - local host closes after an escape sequence (+++) or immediately in case of an
	abortive disconnect from remote.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 506 of 717

80000ST10025a Rev. 24 – 2016-09-07

<mark>#SKTL - Socket Liste</mark> r	1 SELINT 2
	Command returns the <b>OK</b> result code if successful.
	<ul> <li>Note: the command to be successful requests that:</li> <li>the GPRS context 1 is correctly set with +CGDCONT</li> <li>the authentication parameters are set (#USERID, #PASSW)</li> <li>the GPRS coverage is enough to permit a connection</li> <li>the GPRS has been activated with AT#GPRS=1</li> </ul>
	When a connection request comes on the input port, if the sender is not filtered by the internal firewall (see command <b>#FRWL</b> ), an unsolicited code is reported:
	+CONN FROM: <remote addr=""></remote>
	Where: <pre><remote addr=""> - host address of the remote machine that contacted the device.</remote></pre>
	When the connection is established the <b>CONNECT</b> indication is given and the modem goes into data transfer mode.
	On connection close or when context is closed with <b>#GPRS=0</b> the socket is closed and no listen is anymore active.
	If the context is closed by the network while in listening, the socket is closed, no listen is anymore active and an unsolicited code is reported:
	#SKTL: ABORTED
	Note: when closing the listening socket <input port=""/> is a don't care parameter
AT#SKTL?	Read command returns the current socket listening <b>status</b> and the last settings of parameters <b><input port=""/></b> and <b><closure type=""></closure></b> , in the format:
	<b>#SKTL: <status>,<socket type="">, <input port=""/>,<closure type=""></closure></socket></status></b> Where
	<pre><status> - socket listening status 0 - socket not listening 1 - socket listening</status></pre>
AT#SKTL=?	Test command returns the allowed values for parameters <b><mode></mode></b> , <b><socket type=""></socket></b> , <b><input port=""/></b> and <b><closure type=""></closure></b> .
Example	Activate GPRS           AT#GPRS=1           +IP: ###.###.###
	ОК

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 507 of 717

80000ST10025a Rev. 24 - 2016-09-07

#SKTL - Socket Listen	SELINT 2
	Start TCP listening
	AT#SKTL=1,0,1024
	ОК
	or
	AT#SKTL=1,0,1024,255
	ОК
	Receive TCP connection requests
	+CONN FROM: 192.164.2.1
	CONNECT
	exchange data with the remote host
	send escape sequence
	+++
	NO CARRIER
	Now listen is not anymore active
	to stop listening
	AT#SKTL=0,0,1024, 255
	OK
Note	The main difference between this command and <b>#SKTD</b> is that <b>#SKTL</b> does not
	contact any peer, nor does any interaction with the GPRS context status, leaving it
	ON or OFF according to the <b>#GPRS</b> setting, therefore when the connection made
	with <b>#SKTL</b> is closed the context (and hence the local IP address) is maintained.
	with "Stern is closed the context (and hence the local if address) is maintained.

### 3.5.7.9.18. Socket Listen Improved - @SKTL

<b>@SKTL - Socket Liste</b>	n Improved	SELINT 0 / 1
AT@SKTL	Execution command opens/closes the socket listening for connect	ction requests.
[= <mode>,</mode>		
<socket type="">,</socket>	Parameters:	
<input port=""/> ,	<mode> - socket mode</mode>	
[ <closure type="">]]</closure>	0 - closes socket listening	
	1 - starts socket listening	
	<socket type=""> - socket protocol type</socket>	
	0 - TCP	
	<input port=""/> - local host input port to be listened	
	065535 - port number	
	<pre><closure type=""> - socket closure behaviour for TCP when remote</closure></pre>	e host has closed
	0 - local host closes immediately (default)	
	255 - local host closes after an escape sequence (+++) or imme abortive disconnect from remote.	diately in case of an
	Command returns the <b>OK</b> result code if successful.	
	Note: the command to be successful requests that:	
	- the GPRS context 1 is correctly set with +CGDCONT

	<i>Receive connection requests</i> +CONN FROM: 192.164.2.1 CONNECT	
	exchange data with the remote host	
	send escape sequence +++ NO CARRIER Now listen is not anymore active	
	<i>to stop listening</i> AT@SKTL=0,0,1024, 255 OK	
Note	The main difference between this command and the not contact any peer, nor does any interaction with t it <b>ON</b> or <b>OFF</b> according to the <b>#GPRS</b> setting, ther with <b>@SKTL</b> is closed the context (and hence the left	the GPRS context status, leaving refore when the connection made

# 3.5.7.9.19. Firewall Setup - #FRWL

#FRWL - Firewall S	Setup Setup SELINT 0 / 1
AT#FRWL[=	Execution command controls the internal firewall settings.
<action>,</action>	
<ip_addr>,</ip_addr>	Parameters:
<net_mask>]</net_mask>	<action> - command action</action>
	0 - remove selected chain
	1 - add an ACCEPT chain
	2 - remove all chains ( <b>DROP</b> everything); <b><ip_addr></ip_addr></b> and <b><net_mask></net_mask></b> has no meaning in this case.
	<pre><ip_addr> - remote address to be added into the ACCEPT chain; string type, i</ip_addr></pre>
	<pre><net_mask> - mask to be applied on the <ip_addr>; string type, it can be any valid IP address mask in the format: xxx.xxx.xxx</ip_addr></net_mask></pre>
	Command returns <b>OK</b> result code if successful.
	Note: the firewall applies for incoming (listening) connections only.
	Firewall general policy is <b>DROP</b> , therefore all packets that are not included into an <b>ACCEPT</b> chain rule will be silently discarded.
	When a packet comes from the IP address <b>incoming_IP</b> , the firewall chain rules will be scanned for matching with the following criteria:
	incoming_IP & <net_mask> = <ip_addr> &amp; <net_mask></net_mask></ip_addr></net_mask>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 510 of 717

80000ST10025a Rev. 24 - 2016-09-07

#FRWL - Firewall	Setup         SELINT 0 / 1
	If criteria is matched, then the packet is accepted and the rule scan is finished; criteria is not matched for any chain the packet is silently dropped. Note: If all parameters are omitted the command reports the list of all ACCEP' chain rules registered in the Firewall settings in the format: #FRWL: <ip_addr>,<net_mask> #FRWL: <ip_addr>,<net_mask></net_mask></ip_addr></net_mask></ip_addr>
	 ОК
AT#FRWL?	Read command has the same effect as Execution command when parameters ar omitted.
AT#FRWL=?	Test command returns the allowed values for parameter <b><action>.</action></b>
Example	Let assume we want to accept connections only from our devices which are on th IP addresses ranging from 197.158.1.1 to 197.158.255.255 We need to add the following chain to the firewall: AT#FRWL=1,"197.158.1.1","255.255.0.0" OK
Note	For outgoing connections made with <b>#SKTOP</b> and <b>#SKTD</b> the remote host is dynamically inserted into the <b>ACCEPT</b> chain for all the connection duration Therefore the <b>#FRWL</b> command shall be used only for defining either the <b>#SKT</b> or the <b>@SKTL</b> behaviour, deciding which hosts are allowed to connect to the loca device. Rules are not saved in NVM, at startup the rules list will be empty.

<b>#FRWL - Firewall</b>	Setup SELINT 2	
AT#FRWL=	Execution command controls the internal firewall settings.	
[ <action>,</action>		
<ip_address>,</ip_address>	Parameters:	
<net mask="">]</net>	<action> - command action</action>	
	0 - remove selected chain	
	1 - add an ACCEPT chain	
	2 - remove all chains (DROP everything); <ip_addr> and <net_mask> has no meaning in this case.</net_mask></ip_addr>	)
	<pre><ip_addr> - remote address to be added into the ACCEPT chain; string type, it</ip_addr></pre>	
	Command returns <b>OK</b> result code if successful.	
	Note: the firewall applies for incoming (listening) connections only.	
	Firewall general policy is <b>DROP</b> , therefore all packets that are not included into	an

<mark>#FRWL - Firewall</mark>	Setup SELINT 2
	ACCEPT chain rule will be silently discarded.
	When a packet comes from the IP address <b>incoming_IP</b> , the firewall chain rules will be scanned for matching with the following criteria:
	incoming_IP & <net_mask> = <ip_addr> &amp; <net_mask></net_mask></ip_addr></net_mask>
	If criteria is matched, then the packet is accepted and the rule scan is finished; if criteria is not matched for any chain the packet is silently dropped.
AT#FRWL?	Read command reports the list of all <b>ACCEPT</b> chain rules registered in the Firewall settings in the format:
	#FRWL: <ip_addr>,<net_mask> #FRWL: <ip_addr>,<net_mask></net_mask></ip_addr></net_mask></ip_addr>
	 OK
AT#FRWL=?	Test command returns the allowed values for parameter <b><action>.</action></b>
Example	Let assume we want to accept connections only from our devices which are on the IP addresses ranging from 197.158.1.1 to 197.158.255.255
	<i>We need to add the following chain to the firewall:</i> AT#FRWL=1,"197.158.1.1","255.255.0.0" OK
Note	For outgoing connections made with <b>#SKTOP</b> and <b>#SKTD</b> the remote host is dynamically inserted into the <b>ACCEPT</b> chain for all the connection duration. Therefore the <b>#FRWL</b> command shall be used only for defining the <b>#SKTL</b> behaviour, deciding which hosts are allowed to connect to the local device.
	Rules are not saved in NVM, at startup the rules list will be empty.

### 3.5.7.9.20. Firewall Setup for IPV6 addresses - #FRWLIPV6

<b>#FRWLIPV6 - Firewall Setup for IPV</b>	<mark>6 addresses</mark>	SELINT 2
AT#FRWLIPV6=	Execution command controls the internal firewall se	ettings for IPV6
[ <action>,</action>	addresses.	
<ip_address>,</ip_address>		
<net mask="">]</net>	Parameters:	
	<action> - command action</action>	
	0 - remove selected chain	
	1 - add an ACCEPT chain	
	2 - remove all chains ( <b>DROP</b> everything); <b><ip_ad< b=""></ip_ad<></b>	<b>dr&gt;</b> and
	< <b>net_mask</b> > has no meaning in this case.	
	<pre><ip_addr> - remote address to be added into the A</ip_addr></pre>	CCEPT chain;
	string type, it can be any valid IP addr	ess in the format
	XXX.XXX.XXX.XXX.

	1
	XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XX
	or in the format yyyy:yyyy:yyyy:yyyy:
	уууу:уууу
	<net_mask> - mask to be applied on the <ip_addr>; string type, it</ip_addr></net_mask>
	can be any valid IP address mask in the format
	XXX.XXX.XXX.XXX.
	XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XXX.XX
	or in the format yyyy:yyyy:yyyy:yyyy:
	уууу:уууу:уууу
	Command returns <b>OK</b> result code if successful.
	Note: the firewall applies for incoming (listening) connections only.
	Firewall general policy is <b>DROP</b> , therefore all packets that are not
	included into an ACCEPT chain rule will be silently discarded.
	When a packet comes from the IP address <b>incoming IP</b> , the firewall
	chain rules will be scanned for matching with the following criteria:
	incoming_IP & <net_mask> = <ip_addr> &amp; <net_mask></net_mask></ip_addr></net_mask>
	If criteria is matched, then the packet is accepted and the rule scan is
	finished; if criteria is not matched for any chain the packet is silently
	dropped.
AT#FRWLIPV6?	Read command reports the list of all ACCEPT chain rules registered
	in the Firewall settings in the format:
	#FRWLIPV6: <ip_addr>,<net_mask></net_mask></ip_addr>
	#FRWLIPV6: <ip_addr>,<net_mask></net_mask></ip_addr>
	OK
AT#FRWLIPV6=?	Test command returns the allowed values for parameter <b><action>.</action></b>

### 3.5.7.9.21. GPRS Data Volume - #GDATAVOL

<mark>#GDATAVOL - GPR</mark>	S Data Volume	SELINT 2
AT#GDATAVOL=	Execution command reports, for every active PDP co	ontext, the amount of data the
[ <mode>]</mode>	last GPRS session (and the last GSM session, if GSM and transmitted, or it will report the total amount of d during all past GPRS (and GSM) sessions, since last	ata received and transmitted
	Parameter:	
	<mode></mode>	
	0 - it resets the GPRS data counter for the all the ava GSM data counter for GSM context 0	ailable PDP contexts (1-5) and
	1 - it reports the last GPRS session data counter for	the all the set PDP contexts

### 3.5.7.10.2. E-mail SMTP Server - #ESMTP

#ESMTP - E-mail S	SMTP Server SELINT 0 / 1
AT#ESMTP	Set command sets the SMTP server address, used for E-mail sending.
[= <smtp>]</smtp>	SMTP server can be specified as IP address or as nick name.
	Parameter:
	<smtp> - SMTP server address, string type. This parameter can be either:</smtp>
	- any valid IP address in the format: xxx.xxx.xxx
	- any host name to be solved with a DNS query in the format: <host name=""></host>
	(factory default is the empty string "")
	Note: the max length for <b><smtp></smtp></b> is the output of Test command.
	Note: If parameter is omitted then the behaviour of Set command is the same o
	Read command
AT#ESMTP?	Read Command reports the current SMTP server address, in the format:
	#ESMTP: <smtp></smtp>
AT#ESMTP=?	Test command returns the max length for the parameter <b><smtp></smtp></b> .
Example	AT#ESMTP="smtp.mydomain.com"
*	OK
Note	The SMTP server used shall be inside the APN space (the smtp server provided by
	the network operator) or it must allow the Relay, otherwise it will refuse to send the e-mail.

<b>#ESMTP - E-mail S</b>	SMTP Server SELINT 2	
AT#ESMTP=	Set command sets the SMTP server address, used for E-mail sending.	
[ <smtp>]</smtp>	SMTP server can be specified as IP address or as nick name.	
	Parameter:	
	<smtp> - SMTP server address, string type. This parameter can be either:</smtp>	
	<ul> <li>any valid IP address in the format: xxx.xxx.xxx</li> </ul>	
	- any host name to be solved with a DNS query in the format: <b><host name=""></host></b>	
	(factory default is the empty string "")	
	Note: the max length for <b><smtp></smtp></b> is the output of Test command.	
AT#ESMTP?	Read Command reports the current SMTP server address, in the format:	
	#ESMTP: <smtp></smtp>	
AT#ESMTP=?	Test command returns the max length for the parameter <b><smtp></smtp></b> .	
Example	AT#ESMTP="smtp.mydomain.com"	
	OK	
Note	The SMTP server used shall be inside the APN space (the smtp server provided by	
	the network operator) or it must allow the Relay, otherwise it will refuse to send the	
	e-mail.

### 3.5.7.10.3. E-mail Sender Address - #EADDR

<b>#EADDR - E-mail Ser</b>	nder Address SELINT 0 / 1	
AT#EADDR	Set command sets the sender address string to be used for sending the e-mail.	
[= <e-addr>]</e-addr>		
	Parameter:	
	<e-addr> - sender address, string type.</e-addr>	
	- any string value up to max length reported in the Test command.	
	(factory default is the empty string "")	
	Note: If parameter is omitted then the behaviour of Set command is the same of	
	Read command	
AT#EADDR?	Read command reports the current sender address, in the format:	
	#EADDR: <e-addr></e-addr>	
AT#EADDR=?	Test command returns the maximum allowed length of the string parameter <e-< th=""></e-<>	
	addr>.	
Example	AT#EADDR="me@email.box.com"	
_		
	AT#EADDR? #EADDR: "me@email.box.com"	
	OK	

<b>#EADDR - E-mail Sen</b>	ider Address SELINT 2	
AT#EADDR=	Set command sets the sender address string to be used for sending the e-mail.	
[ <e-add>]</e-add>		
	Parameter:	
	<e-addr> - sender address, string type.</e-addr>	
	- any string value up to max length reported in the Test command.	
	(factory default is the empty string "")	
AT#EADDR?	Read command reports the current sender address, in the format:	
	#EADDR: <e-addr></e-addr>	
AT#EADDR=?	Test command returns the maximum allowed length of the string parameter <e-< th=""></e-<>	
	addr>.	
Example	AT#EADDR="me@email.box.com"	
_	OK	
	AT#EADDR?	
	#EADDR: "me@email.box.com"	
	ОК

### 3.5.7.10.6. E-mail Sending With GPRS Context Activation - #SEMAIL

<b>#SEMAIL - E-mail Se</b>	#SEMAIL - E-mail Sending With GPRS Context Activation SELINT 0 / 1		
AT#SEMAIL= <da>, <subj></subj></da>	Execution command activates a GPRS context, if not previously <b>#EMAILACT</b> , and sends an e-mail message. The GPRS contex when the e-mail is sent.	activated by	
	Parameters: <da> - destination address, string type (maximum length 100 ch <subj> - subject of the message, string type (maximum length 1</subj></da>		
	The device responds to the command with the prompt '>' and aw message body text.	vaits for the	
	To complete the operation send <b>Ctrl-Z</b> char ( <b>0x1A</b> hex); to exit the message send <b>ESC</b> char ( <b>0x1B</b> hex).	without writing	
	If e-mail message is successfully sent, then the response is <b>OK</b> . If message sending fails for some reason, an error code is report	ed.	
	Note: if the length of one of the string type parameters exceeds t length, then the string is truncated.	he maximum	
	Note: Care must be taken to ensure that during the command exe commands are issued.	ecution, no other	
	To avoid malfunctions is suggested to wait for the <b>OK</b> or <b>ERRO</b> <b>ERROR:</b> < <b>err</b> > response before issuing further commands.	DR / +CMS	
<b>P</b> 1	Note: maximum length for message body is 1024 bytes, trying to will cause the surplus to be discarded and lost.	o send more data	
Example	AT#SEMAIL="me@myaddress.com","subject of the mail" >message body this is the text of the mail message CTRL-Z		
	wait OK Massaga has been sent		
Note	Message has been sent.         This command is obsolete. It's suggested to use the couple #EM         #EMAILD instead of it.	IAILACT and	

#SEMAIL – E-mail Sending With GPRS Context Activation SELINT 2		SELINT 2
L / J J	Execution command activates a GPRS contex by #EMAILACT, and sends an e-mail messag deactivated when the e-mail is sent.	· · · ·

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 523 of 717

	Parameters:	
	<da> - destination address, string type. (maximum length 100 characters) <subj> - subject of the message, string type. (maximum length 200 characters)</subj></da>	
	The device responds to the command with the prompt '>' and awaits for the message body text.	
	To complete the operation send Ctrl-Z char $(0x1A hex)$ ; to exit without writing the message send ESC char $(0x1B hex)$ .	
	If e-mail message is successfully sent, then the response is OK. If message sending fails for some reason, an error code is reported.	
	Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated.	
	Note: Care must be taken to ensure that during the command execution, no other commands are issued.	
	To avoid malfunctions is suggested to wait for the OK or ERROR / +CMS ERROR: <err> response before issuing further commands.</err>	
	Note: maximum length for message body is 1024 bytes, trying to send more data will cause the surplus to be discarded and lost.	
	Note: this command is not allowed if GSM context is active (see AT#SGACT=0,1).	
AT#SEMAIL=?	Test command returns the <b>OK</b> result code.	
Example	AT#SEMAIL="me@myaddress.com","subject of the mail" >message body this is the text of the mail message CTRL-Z	
	wait OK	
	Message has been sent.	

### 3.5.7.10.7. E-mail GPRS Context Activation - #EMAILACT

<b>#EMAILACT - E-mail</b>	GPRS Context Ativation	SELINT 0 / 1	
AT#EMAILACT[=	Execution command deactivates/activates the GPRS context	, eventually proceeding	
[ <mode>]]</mode>	with the authentication with the parameters given with <b>#PASSW</b> and <b>#USERID</b> .		
	Parameter:		
	<mode> - GPRS context activation mode</mode>		

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 524 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#EMAILACT - E-mai</b>	I GPRS Context Ativation	SELINT 0/1
	0 - GPRS context deactivation request	1
	1 - GPRS context activation request	
	1	
	Note: issuing <b>AT#EMAILACT<cr></cr></b> reports the current s context for the e-mail, in the format:	tatus of the GPRS
	context for the e-mail, in the format.	
	#EMAILACT: <status></status>	
	where:	
	<status></status>	
	0 - GPRS context deactivated	
	1 - GPRS context activated	
	Note: issuing AT#EMAILACT= <cr> is the same as iss</cr>	uing the command
	AT#EMAILACT=0 <cr>.</cr>	C
	Note: if you request a GPRS context deactivation during a call is	ssuing either
	AT#GPRS=0 or AT#EMAILACT=0 and then, after the call te	
	to request a GPRS context activation through #EMAILACT, yo	
	following sequence of three commands	
	Tono wing sequence of three commands	
	AT#EMAILACT=1	
	OK	
	AT#EMAILACT=0	
	OK	
	AT#EMAILACT=1 OK	
	ŬK	
AT#EMAILACT?	Read command has the same effect of the Ex	ecution command
	AT#EMAILACT <cr>.</cr>	countroll commune
AT#EMAILACT=?	Test command returns the allowed values for parameter <b><mode< b=""></mode<></b>	>
Example	AT#EMAILACT=1	
платри	OK	
	Now GPRS Context has been activated	
	AT# EMAILACT=0	
	OK	
	Now GPRS context has been deactivated.	
Note	It is strongly recommended to use the same command (e.g.	#EMAILACT) to
	activate the context, deactivate it and interrogate about its status	•
	· • •	

<b>#EMAILACT - E-mail</b>	GPRS Context Ativation	SELINT 2
AT#EMAILACT= [ <mode>]</mode>	Execution command deactivates/activates the <b>PDP cont</b> proceeding with the authentication with the parameters g <b>#USERID</b> .	
	Parameter: <b><mode> - PDP context</mode></b> activation mode	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 525 of 717

SELINT 2 **#EMAILACT - E-mail GPRS Context Ativation** 0 - GPRS context deactivation request 1 - GPRS context activation request Note: at least a socket identifier needs to be associated with PDP context #1 in order to every **#EMAILACT** action be effective: by default the **PDP context #1** is associated with socket identifiers 1, 2 and 3, but it is possible to modify these associations through #SCFG. Trying to issue a #EMAILACT action when no socket identifier is associated with PDP context #1 raises an error. Note: if the PDP context #1 has been activated issuing AT#EMAILACT=1, then • if you request to deactivate the **PDP context #1** issuing **AT#GPRS=0** DTE receives the final result code **OK** but nothing really happens • if you request to deactivate the **PDP context #1 during a call** issuing AT#EMAILACT=0 and then, after the call termination, you want to activate the PDP context #1 again through #EMAILACT, you need to issue the following sequence of three commands AT#EMAILACT=1 OK AT#EMAILACT=0 OK AT#EMAILACT=1 OK (Analogous considerations if you want to request the activation of **PDP context** #1 issuing AT#GPRS=1, see #GPRS) Note: this command is not allowed if GSM context is active (see AT#SGACT=0,1). AT#EMAILACT? Read command reports the current status of the GPRS context for the e-mail, in the format. **#EMAILACT:** <status> where: <status> 0 - GPRS context deactivated 1 - GPRS context activated Test command returns the allowed values for parameter <mode>. **AT#EMAILACT=?** AT#EMAILACT=1 Example OK Now GPRS Context has been activated AT# EMAILACT=0 OK Now GPRS context has been deactivated. It is strongly recommended to use the same command (e.g. #EMAILACT) to Note

80000ST10025a Rev. 24 – 2016-09-07

<b>#EMAILACT - E-mail</b>	GPRS Context Ativation	SELINT 2
	activate the context, deactivate it and interrogate about its statu	8.

### 3.5.7.10.8. E-mail Sending - #EMAILD

<b>#EMAILD - E-mail Se</b>	nding SELINT 0 / 1
AT#EMAILD= <da>,</da>	Execution command sends an e-mail message if GPRS context has already been
<subj></subj>	activated by either AT#EMAILACT=1 or AT#GPRS=1.
	Parameters: <b>da&gt;</b> - destination address, string type (maximum length 100 characters).
	<pre><subj> - subject of the message, string type (maximum length 100 characters).</subj></pre>
	The device responds to the command with the prompt '>' and awaits for the message body text.
	To complete the operation send Ctrl-Z char $(0x1A \text{ hex})$ ; to exit without writing the message send ESC char $(0x1B \text{ hex})$ .
	If e-mail message is successfully sent, then the response is <b>OK</b> . If message sending fails for some reason, an error code is reported.
	Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated.
	Note: Care must be taken to ensure that during the command execution, no other commands are issued.
	To avoid malfunctions is suggested to wait for the <b>OK</b> or <b>ERROR / +CMS</b> <b>ERROR:<err></err></b> response before issuing further commands.
	Note: maximum length for message body is 1024 bytes, trying to send more data will cause the surplus to be discarded and lost.
Example	AT#EMAILD="me@myaddress.com","subject of the mail" >message body this is the text of the mail message CTRL-Z
	wait OK Message has been sent.
Note	The only difference between this command and the <b>#SEMAIL</b> is that this command does not interact with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the <b>#EMAILACT</b> setting, thus, when the connection made with <b>#EMAILD</b> is closed, the context status is maintained.

<b>#EMAILD – E-mail Sending</b>	SELINT 2
AT#EMAILD=[ <da>,<subj>]</subj></da>	Execution command sends an e-mail message if GPRS context has already
	been activated by either AT#SGACT=1,1 or AT#EMAILACT=1 or

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 527 of 717

	AT#GPRS=1
	It is also possible to send an e-mail on the GSM context, if it has already been activated by <b>AT#SGACT=0,1</b> .
	Parameters:
	<da> - destination address, string type. (maximum length 100 characters) <subj> - subject of the message, string type. (maximum length 200 characters)</subj></da>
	The device responds to the command with the prompt '>' and awaits for the message body text.
	To complete the operation send Ctrl-Z char $(0x1A hex)$ ; to exit without writing the message send ESC char $(0x1B hex)$ .
	If e-mail message is successfully sent, then the response is OK. If message sending fails for some reason, an error code is reported.
	Note: if the length of one of the string type parameters exceeds the maximum length, then the string is truncated.
	Note: Care must be taken to ensure that during the command execution, no other commands are issued.
	To avoid malfunctions is suggested to wait for the OK or ERROR / +CMS ERROR: <err> response before issuing further commands.</err>
	Note: maximum length for message body is 1024 bytes for versions till 7.03.02/7.02.07 and from 10.0x.xx0 till 10.0x.xx2, 1500 bytes for versions starting from 10.0x.xx3, trying to send more data will cause the surplus to be discarded and lost.
AT#EMAILD=?	Test command returns the <b>OK</b> result code.
Example	AT#EMAILD="me@myaddress.com","subject of the mail" >message body this is the text of the mail message CTRL-Z
	wait OK
<b>N</b> T	Message has been sent.
Note	The only difference between this command (set using GPRS context) and the <b>#SEMAIL</b> is that this command does not interact with the GPRS context status, leaving it <b>ON</b> or <b>OFF</b> according to the <b>#EMAILACT</b> ( <b>#SGACT</b> ) setting, thus, when the connection made with <b>#EMAILD</b> is closed, the context status is maintained.

80000ST10025a Rev. 24 - 2016-09-07

### 3.5.7.10.11. SMTP Read Message - #EMAILMSG

<b>#EMAILMSG - SMTP</b>	Read Message	SELINT 0 / 1
AT#EMAILMSG	Execution command returns the last response from SMTP server	
AT#EMAILMSG?	Read command has the same behaviour as Execution command.	

#EMAILMSG - SMTP Read Message SELINT 2		SELINT 2
AT#EMAILMSG	Execution command returns the last response from SMTP server	
AT#EMAILMSG=?	Test command returns the <b>OK</b> result code.	

### 3.5.7.10.12. Send mail with attachment - #SMTPCL

<mark>#SMTPCL – send mail wit</mark> l	h attachment SE	LINT 2
AT#SMTPCL=	This command permits to send an email with different type	es of
<da>,<subj>,<att></att></subj></da>	attachments if GPRS context has already been activated	
[, <filename>,<encod>]</encod></filename>	(#SGACT,#EMAILACT or #GPRS).	
[, , ]		
	After sending message body text (as with #EMAILD), the	command
	switch to online mode if attachment has to be sent.	••••••••
	While in online mode data received on the serial port are the	ransmitted on
	the SMTP socket as MIME attachment.	
	The escape sequence has to be sent to close the SMTP con	nection
	The escape sequence has to be sent to close the SWITT con	needon.
	Encoding of data received on the serial port is performed i	frequired
	(binary data), before transmission on the SMTP socket.	ricquirea
	(ontary data), before transmission on the Siviri Socket.	
	Parameters:	
	<pre><da> - destination address, string type.</da></pre>	
	(maximum length 100 characters)	
	<pre>(maximum length 100 characters) <subj> - subject of the message, string type.</subj></pre>	
	(maximum length 200 characters)	
	<att> - attached file flag</att>	
	0 – no attachment	
	1 – attach a txt file	
	2 – attach a binary file(jpg,bin,pdf,)	
	<filename> - attached file name</filename>	
	(maximum length 50 characters)	
	<encod> -Content-Transfer-Encoding used for attachment</encod>	
	0 - "7bit" means data all represented as short lines of	
	US-ASCII data	
	1 - "base64" designed to represent arbitrary sequences of	
	octets in a form that need not be humanly readable	
	octets in a form that need not be numarity readable	
	Note: if no attachment ( <b><att></att></b> 0) has to be sent, the behavior	or is the same as
	with #EMAILD.	
	OK after CTRL-Z is returned(if connection was successful	1) the switch to
		.,, the striten to

page 530 of 717

	online mode is not performed.
	Note: If a txt file ( <b>att&gt;</b> =1) is attached, only <b>encod&gt;</b> 0("7bit") is possible. If a binary file ( <b>att&gt;</b> =2) is attached, only <b>encod&gt;</b> 1("base64") is possible.
	Note: if <b><att>=</att></b> 0 and <b><filename></filename></b> is present and not empty, the attachment won't be considered
	Note: if <b><att></att></b> 1 or 2 and <b><filename></filename></b> is not present, command will return an ERROR
	Note: default SMTP port (25) is used
AT#SMTPCL=?	Test command reports the supported range of values for parameters <da>,<subj>,<att>[,<filename>,<encod>]</encod></filename></att></subj></da>
Examples	at#smtpcl="me@myaddress.com","test1",1,"sample.txt",0 >message bodythis is the text of the mail message Send CTRL-Z CONNECT data received on the serial port are sent as attachment Send escape sequence to close the SMTP connection +++ NO CARRIER at#smtpcl="me@myaddress.com","test2",2,"image.jpg",1 >message bodythis is the text of the mail message Send CTRL-Z CONNECT data received on the serial port are base64-encoded and sent as attachment Send escape sequence to close the SMTP connection +++ NO CARRIER

### 3.5.7.10.13. E-mail SMTP Port - #ESMTPPORT

<b>#ESMTPPORT – E-mail SMT</b>	P Port	<mark>SELINT 2</mark>
AT#ESMTPPORT= <port></port>	This command permits to set SMTP port	
	Parameters: <b>Port&gt; -</b> SMTP port to contact (default 25)	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 531 of 717

80000ST10025a Rev. 24 – 2016-09-07

	25465,587 Note: SMTP protocol is used on the selected port Note: the value set by command is directly stored in NVM
AT#ESMTPPORT?	Read command reports the currently selected <b><port></port></b> in the format: #ESMTPPORT: <b><port></port></b>
AT#ESMTPPORT=?	Test command reports the supported range of values for parameter < <b>Port</b> >

### 3.5.7.10.14. E-mail sender name - #ENAME

<b>#ENAME – E-mail sender nam</b>	e SELINT 2
AT#ENAME=[ <e- name&gt;][,<charset>]</charset></e- 	Set command sets the full name of the e-mail sender that will be displayed by the receiver in place of the sender e-mail address. Parameter: < <b>e-name</b> > - sender name, string type.
	- any string value up to max length reported in the Test command. (factory default is the empty string "")
	<charset> - Numeric parameter indicating the character encoding used in <e-name> parameter 0 - US-ASCII (default) 1 - UTF-8</e-name></charset>
	Note: do not use the SPACE character. In place of it, use UNDERSCORE (""), but only if <charset> is 0.</charset>
AT#ENAME?	Read command returns the current setting in the format: #ENAME: <e-name>,<charset><cr><lf></lf></cr></charset></e-name>
AT#ENAME=?	Test command returns the maximum allowed length of the string parameter <b><e-name></e-name></b> and the range of values accepted by parameter <b><charset></charset></b>

### 3.5.7.11. Easy Scan® Extension AT Commands

# NOTE:

it is strongly suggested to issue all the Easy Scan® Extension AT commands with **NO SIM** inserted, to avoid a potential conflict with normal module operations, such as "incoming call", "periodic location update, "periodic routing area update" and so on.

#### 3.5.7.11.1. Network Survey - #CSURV

<b>#CSURV - Network Su</b>	Irvey SELINT 0 / 1
AT#CSURV	Execution command allows to perform a quick survey through band channels,
[=<\$>, <e>]</e>	starting from channel <s> to channel <e>. If parameters are omitted, a full band scan is performed.</e></s>
AT*CSURV	•
[=<\$>, <e>]</e>	Parameters:
(both syntax are	<s> - starting channel</s>
possible)	<e> - ending channel</e>
	After issuing the command the device responds with the string:
	Network survey started
	and, after a while, a list of informations, one for each received carrier, is reported, each of them in the format:
	(For BCCH-Carrier) arfcn: <arfcn> bsic: <bsic> rxLev: <rxlev> ber: <ber> mcc: <mcc> mnc: <mnc> lac: <lac> cellId: <cellid> cellStatus: <cellstatus> numArfcn: <numarfcn> arfcn: [<arfcn1>[<arfcn64>]] [numChannels: <numchannels> array: [<ba1>[<ba32>]] [pbcch: <pbcch> [nom: <nom> rac: <rac> spgc: <spgc> pat: <pat> nco: <nco> t3168: <t3168> t3192: <t3192> drxmax: <drxmax> ctrlAck: <ctrlack> bsCVmax: <bscvmax> alpha: <alpha> pcMeasCh: <pcmeasch>]]] <cr><lf><cr><lf><cr><lf>&lt;</lf></cr></lf></cr></lf></cr></pcmeasch></alpha></bscvmax></ctrlack></drxmax></t3192></t3168></nco></pat></spgc></rac></nom></pbcch></ba32></ba1></numchannels></arfcn64></arfcn1></numarfcn></cellstatus></cellid></lac></mnc></mcc></ber></rxlev></bsic></arfcn>
	<pre>where: <arfcn> - C0 carrier assigned radio channel (BCCH - Broadcast Control Channel) <bsic> - base station identification code <rxlev> - receiption level (in dBm) <ber> - bit error rate (in %) <mcc> - mobile country code <mnc> - mobile network code <lac> - location area code <cellid> - cell identifier</cellid></lac></mnc></mcc></ber></rxlev></bsic></arfcn></pre>

# 3.5.7.11.11. PLMN Network Survey (Numeric Format) - #CSURVPC

<b>#CSURVPC - PLMN</b>	Network Survey (Numeric Format) SELINT 2
AT#CSURVPC= <plmn></plmn>	Execution command performs a quick network survey through channels. The survey stops as soon as a BCCH carriers belonging to the selected PLMN is found.
	The result is given in numeric format and is like command <b>#CSURVC</b> .
	Parameter:
	plmn> - the desired PLMN in numeric format
AT#CSURVPC=?	Test command returns OK

#### 3.5.7.11.12. Network Survey Of Timing Advance - #CSURVTA

<mark>#CSURVTA –</mark> Network Survey	Of Timing Advance SELINT 2	
AT#CSURVTA= <ch1>,[<ch2> ,[[,<ch<i>n&gt;]]]</ch<i></ch2></ch1>	Execution command allows to perform a quick survey of timing advance through the given channels or through top 6 neighbour cells.	;
	Parameters: < <b>ch</b> <i>n</i> <b>&gt;</b> - channel number (arfcn) or 1024	
	If <ch1> is different than 1024. After issuing the command the device responds with the string:</ch1>	
	Network survey started	
	and, after a while, a list of timing advance values, one for each received carrier, is reported, each of them in the format:	
	arfcn: <arfcn> TA: <tavalue><cr><lf><cr><lf><cr><lf></lf></cr></lf></cr></lf></cr></tavalue></arfcn>	
	where: <b>arfcn&gt;</b> - decimal number; it is the RF channel <b>TAValue&gt;</b> - decimal number; it is the timing advance value in bit periods (1 bit period = 48/13 μs); the range of this value is 0-63; this value is -1 if time advance measurement fails	ıe
	Lastly, the <b>#CSURVTA</b> output ends in two ways, depending on the last <b>#CSURVF</b> setting:	
	if <b>#CSURVF=0</b> or <b>#CSURVF=1</b> The output ends with the string:	
	Network survey ended	
	if #CSURVF=2	
	the output ends with the string:

AT Commands Reference Guide 80000ST10025a Rev. 24 – 2016-09-07

Network survey ended (Carrier: <noarfcn> BCCh: 0)</noarfcn>
where <pre><noarfcn> - number of scanned frequencies</noarfcn></pre>
Note: the maximum number of channels is 20.
Note: during the execution of this command calls and sms, either incoming or outgoing, are not supported.
Note: after the end of this command it is strongly suggested to wait at least 5 seconds before sending other AT commands.
Note: this command can only be executed when mobile is in idle state.
Note: it is possible to measure timing advance of cells that do not belong to current selected PLMN or current neighbour cell list.
Note: if serving cell timing advance is needed, it is strongly suggested to measure its timing advance with this command, adding serving cell ARFCN to the list, in order to have even measures.
Note: the command may be aborted and return ERROR in case of higher priority protocol stack event.
Note: AT#CSURVNLF configuration affects this command behaviour.
Note: AT#CSURVEXT configuration does not affect this command behaviour.
If there is only one parameter and <b><ch1></ch1></b> is equal to 1024. After issuing the command the device responds with the string
ARFCN dBm MCC MNC LAC cell TA <cr><lf></lf></cr>
followed by the list of top 6 neighbour ARFCN parameters, including timing advance, in the format:
<arfcn> <dbm> <mcc> <mnc> <lac> <id> <tavalue><cr><lf></lf></cr></tavalue></id></lac></mnc></mcc></dbm></arfcn>
where: <arfcn> - decimal number; it is the RF channel <dbm> - decimal number; it is received signal strength in dBm <mcc> - hexadecimal number; it is mobile country code <mnc> - hexadecimal number; it is mobile network code <lac> - hexadecimal number; it is location area code</lac></mnc></mcc></dbm></arfcn>

	#STGI: <cmdtype>,<itemid>,<itemtext>[,<nextactionid>]</nextactionid></itemtext></itemid></cmdtype>	
	where:	
	<commanddetails> - unsigned Integer used as a bitfield</commanddetails>	
	0255 - used as a bit field:	
	bit 1:	
	0 - no selection preference 1 - selection using soft key preferred	
	bit 2 to 7:	
	0	
	bit 8:	
	0 - no help information available	
	1 - help information available	
	<numofitems> - number of items in the list</numofitems>	
	<titletext> - string giving menu title</titletext>	
	<itemid> - item identifier</itemid>	
	1< <b>numOfItems&gt;</b>	
	<itemtext> - title of item</itemtext>	reaution of
	<pre><nextactionid> - the next proactive command type to be issued upon ex the menu item.</nextactionid></pre>	
	0 - no next action information available.	
	Note: upon receiving the <b>#STGI</b> response, the TA must send <b>#STSR</b> co	mmand (see
	below) to confirm the execution of the proactive command and provide a	any
	required user response, e.g. selected menu item.	
AT#STGI?	The read command can be used to request the currently ongoing <b>proacti</b>	ve
	command and the SAT state in the format	
	#STGI: <state>,cmdType&gt;</state>	
	where:	
	<state> - SAT interface state (see #STIA)</state>	
	<cmdtype> - ongoing proactive command</cmdtype>	
	An error message will be returned if there is no pending command.	
AT#STGI=?	Test command returns the range for the parameters <b><state></state></b> and <b><cmdt< b=""></cmdt<></b>	ype>.
Note	The unsolicited notification sent to the user:	
	#STN: 37	
	is an indication that the main menu of the SIM Application has been sen	t to the TA.
	It will be stored by the TA so that it can be displayed later at any time by

<b>#STGI - SIM Tookit G</b>	et Information	SELINT 2
	AT#STGI=37 command. A typical SAT session on AT interface starts after an #STN: 37 received, if enabled. At that point usually an AT#STGI=37 con after the SAT main menu has been displayed on TE an AT#ST command is issued to select an item in the menu (see below). T ends with a SIM action like sending an SMS, or starting a call. the session from the beginning going back to SAT main menu i an AT#STSR=37,16 command.	nmand is issued, and SR=37,0,x he session usually After this, to restart
	The unsolicited notification sent to the user: #STN:237 is an indication that the main menu of the SIM Application has the TA, and it is no longer available. In this case AT#STGI=37 will be always ERROR.	

## 3.5.7.12.3. SIM Tookit Send Response - #STSR

#STSR - SIM Took	it Send Response SELINT 2	
AT#STSR=	The write command is used to provide to SIM user response to a command ar	nd any
[ <cmdtype>,</cmdtype>	required user information, e.g. a selected menu item.	
<userresponse></userresponse>		
[, <data>]]</data>	Parameters:	
	<pre><cmdtype> - integer type; proactive command ID according to GSM 11.14 #STGI)</cmdtype></pre>	(see
	<userresponse> - action performed by the user</userresponse>	
	0 - command performed successfully (call accepted in case of call setup, star	rt
	connection in case of open channel request)	
	16 - proactive SIM session terminated by user	
	17 - backward move in the proactive SIM session requested by the user	
	18 - no response from user	
	19 - help information required by the user	
	20 - USSD/SS Transaction terminated by user	
	32 - TA currently unable to process command	
	34 - user has denied SIM call setup request	
	35 - user cleared down SIM call before connection or network release	
	<data> - data entered by user, depending on <cmdtype>, only required if</cmdtype></data>	
	<b><result></result></b> is 0:	
	Get Inkey	
	<data> contains the key pressed by the user; used character set should be the selected with +CSCS.</data>	one
	Note: if, as a user response, a binary choice (Yes/No) is requested by the SIM	
	application using bit 3 of the <commanddetails> parameter the valid content</commanddetails>	
	the <b><inputstring></inputstring></b> is:

80000ST10025a Rev. 24 - 2016-09-07

<mark>#STSR - SIM Too</mark>	kit Send Response SELINT 2	
	<ul> <li>a) "IRA", "8859-1", "PCCP437" charsets: "Y" or "y" (positive answer) and "N" or "n" (negative answer)</li> <li>b) UCS2 alphabet "0079" or "0059" (positive answer) and "006E" or "004E" (negative answer)</li> </ul>	
	<i>Get Input</i> <data> - contains the string of characters entered by the user (see above)</data>	
	Select Item <data> - contains the item identifier selected by the user</data>	
	Note: Use of icons is not supported. All icon related actions will respond with no icon available.	
AT#STSR?	The read command can be used to request the currently ongoing <b>proactive</b> <b>command</b> and the SAT state in the format	
	<b>#STSRI: <state>,<cmdtype></cmdtype></state></b> where <sup>-</sup>	
	<pre><state> - SAT interface state (see #STIA)</state></pre>	
	<cmdtype> - ongoing proactive command</cmdtype>	
	An error message will be returned if there is no pending command.	
AT#STSR=?	Test command returns the range for the parameters <b><state></state></b> and <b><cmdtype></cmdtype></b> .	

#### 3.5.7.12.4. SIM Tookit terminal Attach - #STTA

<mark>#STTA –</mark> SIM Toolkit Term	inal Attach SELINT 2
AT#STTA= <state></state>	This command attaches/detaches the SIM Toolkit application to the AT instance reserved for this use.
	Parameters: <b><state>:</state></b> attached state 0 – SIM Toolkit detaches
	1 – SIM Toolkit attaches
	If SIM Toolkit application has been already attached/detached the command does nothing and returns OK.
AT#STTA?	Read command reports the current <b><state></state></b> in the format: # <b>STTA: <state></state></b>
AT#STTA=?	Test command reports the supported range of values for parameter <state></state>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 568 of 717

#### **AT Commands Reference Guide** 80000ST10025a Rev. 24 – 2016-09-07

Note	The AT instance reserved for the SIM Toolkit application is the #3.
	Issuing AT#STTA= <state> when the AT instance has been already attached to another service (CMUX, SMSATRUN/TCPATRUN, OTA) causes an ERROR result code to be returned.</state>

#### 3.5.7.12.5. SIM Tookit Show Activation - #STSA

#STSA - SIM Toolkit S	Show Activation	SELINT 2
AT#STSA	Execution command returns the SIM Toolkit activation status, in #STSA: <menu_created>,<instance>,<activated_instance< th=""><th></th></activated_instance<></instance></menu_created>	
	<pre>where: <menu_created> - 0 - SIM Toolkit SET UP MENU command not received, main 1- SIM Toolkit SET UP MENU command received, main menu <instance> - instance number where this #STSA command has <activated_instance> - instance where SIM Toolikit is active for Note: if the SIM Toolkit is not active, the command returns just code.</activated_instance></instance></menu_created></pre>	present been issued or menu interaction
AT#STSA=?	Test command returns the <b>OK</b> result code.

# 3.5.7.13. Jammed Detect & Report AT Commands

#### 3.5.7.13.1. Jammed Detect & Report - #JDR

<mark>#JDR - Jammed I</mark>	Detect & Report	SELINT 0 / 1
AT#JDR[=	Set command allows to control the Jammed Detect & Re	eport feature.
[ <mode></mode>		
[, <mnpl>,</mnpl>	The MODULE can detect if a communication Jammer is	
<dcmn>]]]</dcmn>	indication to the user of this condition either on the seria	al line with an unsolicited
	code or on a dedicated GPIO by rising it.	
	Parameters:	
	<mode> - behaviour mode of the Jammed Detect &amp; Rep</mode>	port
	0 - disables Jammed Detect & Report (factory default)	
	1 - enables the Jammed Detect; the Jammed condition	is reported on pin
	GPIO2/JDR	
	GPIO2/JDR Low - Normal Operating Condition	
	GPIO2/JDR <b>High</b> - Jammed Condition.	
	2 - enables the Jammed Detect; the Jammed condition unsolicited result code on serial line, in the format	· ·
	#JDR: <status></status>	
	where:	
	<status></status>	
	JAMMED - Jammed condition detected	
	OPERATIVE - Normal Operating condition resto	
	shown only after a jammed condition has occu	
	3 - enables the Jammed Detect; the MODULE will mal	ke both the actions as for
	<mode>=1 and <mode>=2.</mode></mode>	•
	4 - enables the Jammed Detect; the Jammed condition unsolicited code every 3s on serial line, in the form	-
	#JDR: <status></status>	
	where:	
	<status></status>	
	JAMMED - Jammed condition detected	
	OPERATIVE - Normal Operating condition resto	
	shown only after a jammed condition has occu	
	5 - enables the Jammed Detect; the MODULE will mal	ke both the actions as for
	<mode>=1 and <mode>=4.</mode></mode>	
	<mnpl> - Maximum Noise Power Level</mnpl>	
	0127 (factory default is 70)	
	<b><dcmn></dcmn></b> - Disturbed Channel Minimum Number	
	0254 (factory default is 5)	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 570 of 717

80000ST10025a Rev. 24 - 2016-09-07

#JDR - Jammed	Detect & Report SELINT 0 / 1	
	Note: issuing <b>AT#JDR&lt;CR&gt;</b> is the same as issuing the Read command. Note: issuing <b>AT#JDR=&lt;CR&gt;</b> is the same as issuing the command <b>AT#JDR=0&lt;CR&gt;</b> .	
AT#JDR?	Read command reports the current behaviour mode, Maximum Noise Power Leve and Disturbed Channel Minimum Number, in the format: #JDR: <mode>,<mnpl>,<dcmn></dcmn></mnpl></mode>	
AT#JDR=?	Test command reports the supported range of values for the parameters <mode>,<mnpl> and <dcmn></dcmn></mnpl></mode>	
Example	AT#JDR=2 OK <i>jammer enters in the range</i> #JDR: JAMMED <i>jammer exits the range</i> #JDR: OPERATIVE	
Note	If the device is installed in a particular environment where the default values are no satisfactory the two parameters <b><mnpl></mnpl></b> and <b><dcmn></dcmn></b> permit to adapt the detection to all conditions.	

<mark>#JDR - Jammed I</mark>	Detect & Report SELINT 2	
AT#JDR=	Set command allows to control the Jammed Detect & Report feature.	
<pre>(<mode>)</mode></pre>		
, <mnpl>,</mnpl>	The MODULE can detect if a communication Jammer is active in its range and g	give
<dcmn>]]</dcmn>	indication to the user of this condition either on the serial line with an unsolicited	l
	code or on a dedicated GPIO by rising it.	
	Parameters:	
	<mode> - behaviour mode of the Jammed Detect &amp; Report</mode>	
	0 - disables Jammed Detect & Report (factory default)	
	1 - enables the Jammed Detect; the Jammed condition is reported on pin	
	GPIO2/JDR	
	GPIO2/JDR Low - Normal Operating Condition	
	GPIO2/JDR High - Jammed Condition.	
	2 - enables the Jammed Detect; the Jammed condition is reported with a single unsolicited result code on serial line, in the format:	
	#JDR: <status></status>	
	where:	
	<status></status>	
	JAMMED - Jammed condition detected	
	OPERATIVE - Normal Operating condition restored. This code will be	
	shown only after a jammed condition has occurred.	
	3 - enables the Jammed Detect; the MODULE will make both the actions as for	
	<mode>=1 and <mode>=2.</mode></mode>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 571 of 717

80000ST10025a Rev. 24 – 2016-09-07

<b>#JDR - Jammed Detect</b>	t & Report SELINT 2	
	4 - enables the Jammed Detect; the Jammed condition is reported with an	
	unsolicited code every 3s on serial line, in the format:	
	#JDR: <status></status>	
	where:	
	<status></status>	
	JAMMED - Jammed condition detected	
	OPERATIVE - Normal Operating condition restored. This code will be	
	shown only after a jammed condition has occurred. 5 - enables the Jammed Detect; the MODULE will make both the actions as for	r
	s - enables the failined Detect, the WODOLE will make both the actions as for <mode>=1 and <mode>=4.</mode></mode>	1
	6 - enables the Jammed Detect (this value is available only for 10.0x.xxx releas	se);
	the Jammed condition is reported in the format:	,,
	#JDR: <status></status>	
	where:	
	<status> JAMMED - Jammed condition detected</status>	
	OPERATIVE - Normal Operating condition restored. This code will be	
	shown only after a jammed condition has occurred	
	UNKNOWN – default state before first successful PLMN searching	
	<mnpl> - Maximum Noise Power Level</mnpl>	
	0127 (factory default is 70)	
	<dcmn> - Disturbed Channel Minimum Number</dcmn>	
	0.254 (factory default is 5)	1
AT#JDR?	Read command reports the current behaviour mode, Maximum Noise Power Lev and Disturbed Channel Minimum Number, in the format:	vei
	and Disturbed Channel Minimum Number, in the format.	
	#JDR: <mode>,<mnpl>,<dcmn></dcmn></mnpl></mode>	
AT#JDR=?	Test command reports the supported range of values for the parameters <b><mode></mode></b> , <b><mnpl></mnpl></b> and <b><dcmn></dcmn></b>	
Example	AT#JDR=2	
1	OK	
	<i>jammer enters in the range</i> #JDR: JAMMED	
	jammer exits the range	
	#JDR: OPERATIVE	
	AT#JDR=6	
	#JDR: JAMMED //when jammed	
	OK	
	AT#JDR=6	
	#JDR: OPERATIVE //when in normal operating mode	
	OK	
	AT#JDR=6

AT Commands Reference Guide 80000ST10025a Rev. 24 – 2016-09-07

AT#JDRENH?	Read command reports the current parameter settings for #JDRENH in the format: #JDRENH: <type>,<mode>,<param1>,<param2>,<time></time></param2></param1></mode></type>
	1-254 (default 10) 255 - jamming is notified, if required, only at the end of the scan of all the powerful channels
	when the timer expires, if the jamming condition is still true, the jamming is notified.
	< <b>Time&gt;</b> - This parameter sets, for both methods, the Jamming Reporting timer. The timer <b><time></time></b> starts when the jamming condition is detected;
	situation. Range 1 - 20, default value 5.
	When <b><mode>=2</mode></b> , <b><param2< b="">&gt; is used to set the minimum number of Disturbed Channels to be considered to measure the jamming condition</param2<></b>
	When $<$ mode>=1, $<$ Param2> is used to set the maximum noise level, in negative dBm, to do not consider the bad channel decoding like a jamming condition. Range 35 – 127, default value 110.
	< <b>Param2</b> > - The meaning of this parameter depends by the selected < <b>mode</b> >.
	When <b><mode>=2</mode></b> , <b><param1< b="">&gt; is used to set the value of the minimum variation of received signal strength of the channel, in negative dBm, to be considered to measure the jamming condition. Range 1-20, default value 5.</param1<></b>
	When <b><mode>=1</mode></b> , <b><param1< b="">&gt; is used to set the minimum number of Disturbed Channels</param1<></b> , for Band, to be considered to measure the jamming condition Range 1-50, default value 10.
	< <b>Param1</b> > - The meaning of this parameter depends by the selected < <b>mode</b> >.
	<ul> <li>1 - Method 1 - Counter of Disturbed Channels for band</li> <li>2 - Method 2 - Sudden variation of the signal strength</li> <li>3 - Method 1 whit all JDRENH counters resetted every time the module receives a good BSIC</li> </ul>
	<mode> - This parameter sets the method to be used to detect the jamming condition</mode>
	5 - Enable the JDRE; the MODULE will execute both actions as for < <b>type</b> >=1 and < <b>type</b> >=4.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 574 of 717

# 3.5.7.14. Easy Script<sup>®</sup> Extension - Python<sup>40</sup> Interpreter, AT Commands

# 3.5.7.14.1. Write Script - #WSCRIPT

<b>#WSCRIPT - Write S</b>	cript SELINT 0 / 1
AT#WSCRIPT=	Execution command causes the MODULE to store a file in the Easy Script®
<script_name>,</script_name>	related NVM, naming it <script_name></script_name>
<size></size>	
[, <hidden>]</hidden>	The file should be sent using RAW ASCII file transfer.
	It is important to set properly the port settings. In particular:
	Flow control: hardware.
	Baud rate: 115200 bps
	Parameters:
	<pre><script_name> - name of the file in NVM, string type (max 16 chars, case</script_name></pre>
	sensitive).
	<size> - file size in bytes <hidden> - file hidden attribute</hidden></size>
	0 - file content is readable with <b>#RSCRIPT</b> (default).
	1 - file content is hidden, <b>#RSCRIPT</b> command will report empty file.
	i me content is meden, "Reserver i commune win report empty me.
	The device shall prompt a three character sequence
	<pre><greater than=""><greater than=""></greater></greater></pre>
	(IRA 62, 62, 62)
	after command line is terminated with <b><cr></cr></b> ; after that a file can be entered from
	TE, sized <b><size></size></b> bytes.
	The operations completes when all the bytes are received.
	If writing ends successfully, the response is <b>OK</b> ; otherwise an error code is reported.
	Note: the file name should be passed between quotes; every textual script file must
	have <b>.py</b> extension, whilst every pre-compiled executable script file must have <b>.pyo</b> extension; file names are case sensitive.
	Note: when sending the script be sure that the line terminator is <b>&lt;</b> C <b>R&gt;&lt;</b> L <b>F&gt;</b> and
	that your terminal program does not change it.
	Note: in case of repeated unexpected ERROR response at the end of file download it is strongly suggested to set AT#CPUMODE=1 (when available).

## 3.5.7.14.6. List Script Names - #LSCRIPT

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

80000ST10025a Rev. 24 - 2016-09-07

#LSCRIPT - List Scr	ipt Names SELINT 0 / 1		
AT#LSCRIPT	Execution command reports either the list of file names for the files currently s in the Easy Script <sup>®</sup> related NVM and the available free NVM memory in the format:		
	[#LSCRIPT: <script_name1> <size1></size1></script_name1>		
	[ <cr><lf><cr><lf>#LSCRIPT: <script_namen> <sizen>]]</sizen></script_namen></lf></cr></lf></cr>		
	<cr><lf><cr><lf>#LSCRIPT: free bytes: <free_nvm></free_nvm></lf></cr></lf></cr>		
	where:		
	<script-namen> - file name, quoted string type (max 16 chars, case sensitive)</script-namen>		
	<sizen> - size of script in bytes</sizen>		
	<free_nvm> - size of available NVM memory in bytes</free_nvm>		
AT#LSCRIPT?	Read command has the same behavior of Execution command.		
Example	AT#LSCRIPT #LSCRIPT: First.py 51		
	#LSCRIPT: Second.py 178		
	#LSCRIPT: Third.py 95		
	#LSCRIPT: free bytes: 20000		
	OK		

<b>#LSCRIPT - List Scrip</b>	ot Names SELINT 2
AT#LSCRIPT	Execution command reports either the list of file names for the files currently stored in the Easy Script® related NVM and the available free NVM memory in the format:
	[#LSCRIPT: <script_name1>,<size1> [<cr><lf>#LSCRIPT: <script_namen>,<sizen>]]</sizen></script_namen></lf></cr></size1></script_name1>
	<cr><lf>#LSCRIPT: free bytes: <free_nvm></free_nvm></lf></cr>
	where:
	<script-namen> - file name, quoted string type (max 16 chars, case sensitive)</script-namen>
	<sizen> - size of script in bytes</sizen>
	<pre>size of available NVM memory in bytes</pre>
AT#LSCRIPT=?	Test command returns <b>OK</b> result code.
Example	AT#LSCRIPT
1	#LSCRIPT: "First.py",51
	#LSCRIPT: "Second.py",178
	#LSCRIPT: "Third.py",95
	#LSCRIPT: free bytes: 20000
	ОК

#### 3.5.7.14.7. List Script Names with CRC16 info - #LCSCRIPT

#### **#LCSCRIPT - List Script Names with CRC16 info**

SELINT 2

	Module Reboots	

#### 3.5.7.14.11. CMUX Interface Enable - #CMUXSCR

<b>#CMUXSCR - CMUX</b>	Interface Enable	SELINT 2
AT#CMUXSCR=	Set command enables/disables the 3GPP TS 27.010 multiplexing	
<enable>,[<rate>]</rate></enable>	channel (see +CMUX) at startup before the current script (see #ESCRIPT)	
	execution and specifies the DTE speed at which the device sends	
	CMUX frames (used to fix the <b>DTE-DCE</b> interface speed).	
	Parameters:	
	<enable> - enables/disables CMUX interface at startup.</enable>	
	0 - it disables CMUX interface at startup, before <b>current scrip</b> default)	t execution (factory
	1 - it enables CMUX interface at startup, before current script	execution
	<rate></rate>	
	300	
	1200	
	2400	
	4800	
	9600	
	19200	
	38400	
	57600 115200 (default)	
	115200 (default)	
	If <b><rate></rate></b> is omitted the value is unchanged	
	<enable> and <rate> values are saved in NVM</rate></enable>	
AT#CMUXSCR ?	Read command returns the current value of <b>#CMUXSCR</b> param	eters in the format:
	#CMUXSCR: <enable>,<rate></rate></enable>	
AT#CMUXSCR =?	Test command reports the range for the parameters <b><enable></enable></b> and	d <rate></rate>

#### 3.5.7.15. MMS AT Command Set

#### 3.5.7.15.1. Set network parameters for MMS - #MMSSET

<mark>#MMSSET – Set network p</mark>	arameters for MMS SELINT 2
AT#MMSSET= <cid>,</cid>	This command sets MMSC parameters required to send or retrieve an
<mms proxy="">,</mms>	MMS. Note that PDP context <b><cid></cid></b> should be previously set by
<mms port="">,</mms>	AT+CGDCONT and activated.
<username>,</username>	
<password>,</password>	Parameters:
<mmsc>,<host></host></mmsc>	<ul> <li><cid> - PDP context identifier (see +CGDCONT command)</cid></li> <li>15 - numeric parameter which specifies a particular PDP context definition</li> <li><mms proxy=""> - string that indicates MMS proxy IP address for MMS sending; it can be any valid IP address in the format xxx.xxx.xxx</mms></li> <li><mms port=""> - integer that indicates MMS port for MMS sending</mms></li> <li><username> - string that indicates the user name that will be used when connecting to the MMS proxy. The valid characters are ASCII characters. Maximum length is 64 characters</username></li> <li></li></ul>
	Note: the values set by command are directly stored in NVM and do not depend on the specific CMUX instance.
AT#MMSSET?	Read command reports the currently selected parameters in the format: #MMSSET: <cid>,<mms proxy="">,<mms port&gt;,<username>,<password>,<mmsc>,<host></host></mmsc></password></username></mms </mms></cid>
AT#MMSSET=?	Test command reports the supported range of values for parameters <mms apn="">,<mms proxy="">,<mms< td="">port&gt;,<username>,<password>,<mmsc>.</mmsc></password></username></mms<></mms></mms>

3.5.7.15.2. General settings - #MMSGS

<b>#MMSGS – General Settings</b>	SELINT 2	
AT#MMSGS= <send retries="">,</send>	This command sets outgoing MMS parameters.	
<message class="">,</message>		
<priority>,</priority>	Parameters:	
<sender visibilty="">,</sender>	<send retries=""> - Number of sending retries in case of sending failure.</send>	
<delivery report="">,</delivery>	Default is '1': message is sent once to the MMS center. Maximum tries	
<read report=""></read>	are 3 (including the first try)	
	<message class=""> - integer that indicates MMS class</message>	
	128 – personal (default)	
	129 - advertisement	
	130 - informational	
	131 - auto	
	<pre><pre>priority&gt; - integer that indicates the priority of the MMS assigned by</pre></pre>	
	the originator MMS Client	
	128 - low	
	129 – normal (default)	
	130 - high	
	<sender visibility=""> - integer value indicating whether the originator of the</sender>	
	MMS wishes to show or hide her address	
	128 - hide	
	129 - show (default)	
	<delivery report=""> - integer that specifies whether the originator MMS</delivery>	
	Client requests a delivery report from each recipient	
	128 - yes	
	129 - no (default)	
	<read report=""> - integer that specifies whether the originator MMS Client</read>	
	wants a read report from each recipient	
	128 - yes	
	129 – no (default)	
	Note: the values set by command are directly stored in NVM and do not	
	depend on the specific CMUX instance.

## 3.5.7.15.3. Create/Update MMS Message Mailing List - #MMSTO

<mark>#MMSTO – Create/Upda</mark> t	te MMS Message Mailing List SELINT 2
AT#MMSTO= <op>, <recipients></recipients></op>	This command creates/updates a list of recipients for outgoing MMS. Parameters: <b><op></op></b> - operation 0 – overwrite (default) 1 - append <b><recipients></recipients></b> - string type indicating the destination addresses for outgoing MMS (phone numbers, separated by ",". There can be up to 20 subscriber numbers. Each subscriber number can be no more than 15 characters) Note: the value of <b><recipients></recipients></b> set by command is directly stored in NVM and doesn't depend on the specific CMUX instance.
AT#MMSTO?	Read command reports the currently selected <b><recipients></recipients></b> in the format: #MMSTO: <b><recipients></recipients></b>
AT#MMSTO=?	Test command reports the supported range of values for parameters <b><op></op></b> and <b><recipients></recipients></b> (maximum number of <recipients> addresses).</recipients>
Example	To clear whole recipients list: at#mmsto=0, "" OK

## 3.5.7.15.4. Send a MMS Message - #MMSSEND

#MMSSEND – Send a MMS Mes	sage SELINT 2
AT#MMSSEND= <subject>,<at< th=""><th>This command sends an MMS.</th></at<></subject>	This command sends an MMS.
tached	
file>, <recipients>[,<subscriber< th=""><th>Parameters:</th></subscriber<></recipients>	Parameters:
list>]	<subject> - string indicating MMS subject, with maximum input size of</subject>
	41 characters
	<attached file=""> - string indicating the name of the image file to be</attached>
	attached to MMS. The maximum allowed name size is 32 characters
	<recipients> - string type indicating the destination addresses for</recipients>
	outgoing MMS (phone numbers, separated by ",". There can be up to 20
	subscriber numbers. Each subscriber number can be no more than 15
	characters)
	<subscriber list=""> - integer indicating whether to use or not the</subscriber>
	subscriber list created with #MMSTO
	0 – do not use subscriber list (see <b>#MMSTO</b> ), use <b><recipients></recipients></b>
	(default)
	1 – use subscriber list (see <b>#MMSTO</b> ) ; <b><recipients></recipients></b> is ignored

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 589 of 717

	The device responds to the command with the prompt '>' and waits for the message text.
	To complete the operation send <b>Ctrl-Z</b> char ( <b>0x1A</b> hex); to exit without writing the message send <b>ESC</b> char ( <b>0x1B</b> hex).
	If MMS message is successfully sent, then the response is <b>OK</b> . If delivery report has been requested, a MMS Delivery Report must be sent from the MMS Proxy-Relay to the originator MMS Client. Upon receiving of such report, an unsolicited code will be sent:
	#MMSSEND: <msgid></msgid>
	where <b><msgid></msgid></b> is the reference that was originally assigned to the MMS by the MMS Proxy-Relay and included in the corresponding M-Send.conf. The ID enables an MMS Client to match delivery reports with previously sent or forwarded MMS's.
	If message sending fails for some reason, an error code is reported.
	Note: prior to send the MMS, the PDP context <b><cid></cid></b> (see <b>#MMSSET</b> command) must be defined and activated using <b>+CGDCONT</b> and <b>#SGACT</b> commands.
	Note: only <b>.jpg</b> or <b>.gif</b> images can be sent as attachment.
AT#MMSSEND=?	Test command tests for command existence.
Example	at+cgdcont=1,"IP","mms.tim.it","0.0.0.0",0,0 OK at#sgact=1,1 #SGACT: 10.214.84.15
	OK

#### 3.5.7.15.5. Add MMS attachment - #MMSATTD

#MMSATTD – Add MMS A	ttachment	SELINT 2
AT#MMSATTD= <file name&gt;,<size></size></file 	This command causes the MODULE to store a file in the NVM, narrit <b><file name=""></file></b> . The file is then attached to a MMS message by <b>#MMSSEND</b> .	
	The file should be sent using RAW It is important to set properly the p Flow control: hardware.	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 590 of 717

80000ST10025a Rev. 24 - 2016-09-07

	Baud rate: 115200 bps	
	Parameters: <file name=""> - string indicating MMS attached file name with extension, with maximum name size of 16 characters (including extension; case sensitive). <size> - size of the attached file, in bytes. The maximum allowed size length is 300K. The device shall prompt a five character sequence <cr><lf><greater_than><greater_than><greater_than> (IRA 13, 10, 62, 62, 62) after command line is terminated with <cr>; after that a file can be entered from TE, sized <size> bytes.</size></cr></greater_than></greater_than></greater_than></lf></cr></size></file>	
	The operations completes when all the bytes are received. If writing ends successfully, the response is <b>OK</b> ; otherwise an error code is reported. Note: the file name should be passed between quotes; typically it	
	<ul> <li>has .jpg extension; file names are case sensitive.</li> <li>Only .jpg or .gif images can be stored to be sent as attachment.</li> <li>Note: when sending the script be sure that the line terminator is <cr><lf> and that your terminal program does not change it.</lf></cr></li> </ul>	
AT#MMSATTD=?	Test command reports the maximum length of <b><file name=""></file></b> and range for <b><size></size></b> .	

#### 3.5.7.15.6. HTTP last message - #MMSMSG

#MMSMSG - HTTP L	ast Message	<mark>SELINT 2</mark>
AT#MMSMSG	Execution command returns the last response from HTTP server	(numerical code
	and string, if available).	
AT#MMSMSG=?	Test command returns the <b>OK</b> result code.	

# 3.5.7.15.7. Set notification handling - #MMSSNH

#MMSSNH - Set Notifi	cation Handling	<mark>SELINT 2</mark>
AT#MMSSNH =	Set command enables/disables the received MMS notification un	solicited indication
<mode></mode>	in the ME.	
	Parameter:	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 591 of 717

80000ST10025a Rev. 24 – 2016-09-07

#MMSSNH - Set Not	
	<ul> <li><mode> - type of notification</mode></li> <li>0 - disabled (factory default)</li> <li>1 - enabled; the ME informs of receiving of MMS Notifications, providing the MMS Client with information about a MMS located at the recipient MMS Proxy-Relay and waiting for retrieval, through the following basic unsolicited indication:</li> </ul>
	#MMSI: "MMS NOTIFICATION"
	The notification typically consists of a concatenated SMS in WAP Push format. The message can be then decoded with <b>#MMSLN</b> command. Single SMS in the notification can be listed using <b>+CMGL</b> command. It is recommended to use +CNMI command to enable unsolicited indication of incoming SMS's holding the notification.
	Note: It is recommended to use "AT+CNMI=2,1" command to enable unsolicited indication of incoming SMS's holding the notification, and to store them in SI for subsequent decoding with #MMSLN command.
AT#MMSSNH?	Read command reports whether the unsolicited indication <b>#MMSSNH</b> is currently enabled or not, in the format:
	#MMSSNH: <mode></mode>
AT#MMSSNH=?	Test command returns the supported range of values for parameter <b><mode></mode></b> .
Example	at+cnmi=2,1 OK
	#MMSI: "MMS NOTIFICATION"
	+CMTI: "SM",1 < SMS received
	+CMTI: "SM",2 < SMS received
	at#mmsln #MMSLN: "+393351510315","da modulo tim a tim 3","http://mms.tim.it/servlets/mms/ mmsc?CN12_APqoaq1jy-IlqT29d@KR0",20000
	OK at+cmgf=1 OK at+cmgl=ALL +CMGL: 1,"REC READ","40099","","12/11/20,10:11:44+04" 0C05040B8423F008042BD902010006256170706C69636174696F6E2F766E642 7761702E6D6D732D

## 3.5.7.15.8. List notifications - #MMSLN

#MMSLN - List Notifi	cations	SELINT 2
AT#MMSLN	Execution command lists all notifications of MMS waiting to be proxy server, by reading from SIM the concatenated SMS's conta Push notification of waiting messages, in the format #MMSLN: <fromval>,<subjval>,<uri>,<size> Where <fromval>: sender address <subjval>: subject <uri>: URI to be used to retrieve message <size>: message size as reported by MMSC</size></uri></subjval></fromval></size></uri></subjval></fromval>	
AT#MMSLN=?	Test command returns the <b>OK</b> result code.	

#### 3.5.7.15.9. Get MMS - #MMSGET

<mark>#MMSGET – Get MM</mark>	S	SELINT 2	
AT#MMSGET=	This command retrieves an MMS message from proxy server and	d stores it in the	;

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

80000ST10025a Rev. 24 - 2016-09-07

<mark>#MMSGET – Get MM</mark>	S	SELINT 2
<url>,<size>,<file name&gt;</file </size></url>	MODULE NVM. Note that PDP context <cid> (see #MMSSET be previously defined and activated using +CGDCONT and #SC commands. Parameters: <url> - string indicating MMS address on proxy server, as indica AT#MMSLN command (see above) <size>: message size <file name=""> - string indicating the name of the file in NVM (with to be used to store the retrieved MMS; maximum length is 16 ch file extension</file></size></url></cid>	command) must GACT ated by th extension .mms)
AT#MMSGET=?	Test command returns the <b>OK</b> result code.	

#### 3.5.7.15.10. Forward MMS - #MMSFWD

<b>#MMSFWD – Forward N</b>	1MS	SELINT 2
AT#MMSFWD= <da>,&lt; url&gt;</da>	This command forwards an MMS message stored in proxy set specified destination. Note that PDP context <b><cid></cid></b> (see <b>#MM</b> must be previously defined and activated using <b>+CGDCONT</b> commands.	<b>ISSET</b> command)
	Parameters: <da> - string type indicating the destination addresses for out numbers, separated by ",". There can be up to 20 subscriber m subscriber number can be no more than 15 characters) <url> - string indicating MMS address on proxy server, as ind AT#MMSLN command (see above)</url></da>	umbers. Each
	Note: this command is based upon an MMS 1.2 or higher fun forward transaction consists of the M-Forward.req message, s Client to the MMS Proxy-Relay in order to request an MMS that is located at the MMS Proxy-Relay, and could not be sup MMSC.	sent from the MMS to be forwarded,
AT#MMSFWD=?	Test command returns the <b>OK</b> result code.	

## 3.5.7.15.11. Delete MMS from the MMS proxy server - #MMSDEL

#MMSDEL – Delete MMS from the MMS proxy server SELINT 2		
AT#MMSDEL= <url></url>	This command deletes an MMS message store context <b><cid></cid></b> (see <b>#MMSSET</b> command) mu activated using <b>+CGDCONT</b> and <b>#SGACT</b> c	st be previously defined and
	Parameters: <url> - string indicating MMS address on pro</url>	xy server, as indicated by

timeout> [, <cid>]]]]]]]]</cid>	Range: 0-2

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 595 of 717

AT#HTTPCFG?	Read command returns the current settings for each defined profile in the
	Note: values are automatically saved in NVM.
	Note: the SSL encryption can be enabled only if <enable> parameter of #SSLEN is set to 0 and <ftpsen> parameter of #FTPCFG is set to 0.</ftpsen></enable>
	Note: if the SSL encryption is enabled, the <b><cid></cid></b> parameter has to be set to 1.
	Note: a special form of the Set command, <b>#HTTPCFG=<prof_id></prof_id></b> , causes the values for profile number <b><prof_id></prof_id></b> to reset to default values.
	<cid> - Numeric parameter indicating the PDP Context Identifier. Range: (1-5). Default: 1</cid>
	<timeout>: Numeric parameter indicating the time interval in seconds to wait for receiving data from HTTP server. Range: (1- 65535). Default: 120.</timeout>
	<ssl_enabled> - Numeric parameter indicating if the SSL encryption is enabled. 0 - SSL encryption disabled (default) 1 - SSL encryption enabled</ssl_enabled>
	<pre><pre>password&gt; - String parameter indicating authentication password for HTTP.</pre></pre>
	<username> - String parameter indicating authentication user identification string for HTTP.</username>
	type. 0 – no authentication (default) 1 – basic authentication
	<pre><server_port> - Numeric parameter indicating the TCP remote port of the HTTP server to connect to. Default: 80 for first and second profile; 9978 for third profile. Range 165535. <auth_type> - Numeric parameter indicating the HTTP authentication</auth_type></server_port></pre>
	<ul> <li>any valid IP address in the format: "xxx.xxx.xxx.xxx"</li> <li>any host name to be solved with a DNS query</li> <li>Default: "" for first and second profile; "m2mlocate.telit.com" for third profile.</li> </ul>
	<pre><server_address> - String parameter indicating the IP address of the HTTP server. This parameter can be either:</server_address></pre>

	1
	format:
	#HTTPCFG:
	<pre><prof_id>,<server_address>,<server_port>,<auth_type>,<username> ,<password>,<ssl_enabled>,<timeout>,<cid><cr><lf>[<cr><lf># HTTPCFG:</lf></cr></lf></cr></cid></timeout></ssl_enabled></password></username></auth_type></server_port></server_address></prof_id></pre>
	<pre><pre><pre><pre><pre><pre>f_id&gt;,<server_address>,<server_port>,<auth_type>,<username> ,<pre><pre>context</pre><pre>,<username></username></pre><pre><pre><pre><pre><pre><pre><pre>&lt;</pre></pre></pre></pre></pre></pre></pre></pre></username></auth_type></server_port></server_address></pre></pre></pre></pre></pre></pre>
AT#HTTPCFG =?	Test command returns the supported range of parameters <prof_id>, <server_port>, <auth_type>, <ssl_enabled>, <timeout> and <cid> and the maximum length of <server_address>, <username> and <password> parameters in the format:</password></username></server_address></cid></timeout></ssl_enabled></auth_type></server_port></prof_id>
	<pre># HTTPCFG: (list of supported <prof_id>s),<s_length>,(list of supported <server_port>s), (list of supported <auth_type>s),<u_length>,<p_length>,(list of supported <ssl_enabled>s),(list of supported <timeout>s),(list of supported <cid>s)</cid></timeout></ssl_enabled></p_length></u_length></auth_type></server_port></s_length></prof_id></pre>
	<pre>where: <s_length> - integer type value indicating the maximum length of</s_length></pre>
	parameter <b><password></password></b>

## 3.5.7.16.2. Send HTTP GET, HEAD or DELETE request - #HTTPQRY

<b>#HTTPQRY – send HTTP GET</b>	F, HEAD or DELETE request SELINT 2
AT#HTTPQRY= <prof_id>,<c< th=""><th>Execution command performs a GET, HEAD or DELETE request to</th></c<></prof_id>	Execution command performs a GET, HEAD or DELETE request to
ommand>, <resource>[,<extra< th=""><th>HTTP server.</th></extra<></resource>	HTTP server.
_header_line>]	
	Parameters:
	<prof_id>: Numeric parameter indicating the profile identifier.</prof_id>
	Range: 0-2
	<command/> : Numeric parameter indicating the command requested to
	HTTP server:
	0 – GET
	1 – HEAD
	2 – DELETE
	<resource>: String parameter indicating the HTTP resource (uri), object</resource>
	of the request

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 597 of 717

80000ST10025a Rev. 24 - 2016-09-07

<pre><extra_header_line>: String parameter indicating optional HTTP header line. If sending ends successfully, the response is OK; otherwise an error code is reported. Note: the HTTP request header sent with #HTTPQRY always contains the "Connection: close" line, and it cannot be removed. When the HTTP server answer is received, then the following URC is put on the serial port:</extra_header_line></pre>
#HTTPRING: <prof_id>,<http_status_code>,<content_type>,<data_size></data_size></content_type></http_status_code></prof_id>
Where: <prof_id> is defined as above <http_status_code> is the numeric status code, as received from the server (see RFC 2616)</http_status_code></prof_id>
<content_type> is a string reporting the "Content-Type" header line, as received from the server (see RFC 2616)</content_type>
<data_size> is the byte amount of data received from the server. If the server does not report the "Content-Length:" header line, the parameter value is 0.</data_size>
Note: if there are no data from server or the server does not answer within the time interval specified in <b><timeout></timeout></b> parameter of <b>#HTTPCFG</b> command, then the URC <b>#HTTPRING <http_status_code></http_status_code></b> parameter has value 0.
Note: the time required to receive the #HTTPRING unsolicited can be greater than the one specified in <timeout> parameter of #HTTPCFG command because it also includes the time needed to send the HTTP request to the server.</timeout>
Note: after issuing #HTTPQRY command is not possible to change SSL configuration with #SSLSECCFG and #SSLSECDATA until #HTTPCFG is issued, because SSL connection remains up.
Note: before receiving the #HTTPRING unsolicited, the following commands may answer with "+CME ERROR: Blocking read in progress": #HTTPQRY, #HTTPSND, #SGACT, #GPRS, #EMAILACT and #SEMAIL. Therefore, it is necessary to wait the unsolicited before issuing them.
Test command reports the supported range of values for the parameters <prof_id> and <command/> and the maximum length of <resource> and <extra_header_line> parameters in the format:</extra_header_line></resource></prof_id>

<pre>#HTTPQRY: (list of supported <prof_id>s),(list of supported <command/>s),<r_length>,<m_length> where:</m_length></r_length></prof_id></pre>
<pre><r_length> - integer type value indicating the maximum length of parameter <resource>. <m_length> - integer type value indicating the maximum length of parameter <extra_header_line>.</extra_header_line></m_length></resource></r_length></pre>

#### 3.5.7.16.3. Send HTTP POST or PUT request - #HTTPSND

#HTTPSND – send HTTP POS	<mark>F or PUT request</mark>	<mark>SELINT 2</mark>
AT#HTTPSND= <prof_id>,<c< th=""><th>Execution command performs a POST or PUT</th><th>request to HTTP server</th></c<></prof_id>	Execution command performs a POST or PUT	request to HTTP server
ommand>, <resource>,<data_l< th=""><th>and starts sending data to the server.</th><th></th></data_l<></resource>	and starts sending data to the server.	
en>[, <post_param>[,<extra< th=""><th></th><th></th></extra<></post_param>		
_header_line>]]	The device shall prompt a three character seque	
	<pre><greater_than><greater_than><greater_tha< pre=""></greater_tha<></greater_than></greater_than></pre>	n>
	(IRA 62, 62, 62)	
	after command line is terminated with <cr>; a entered from TE, sized <data_len> bytes.</data_len></cr>	fter that the data can be
	Parameters:	
	<pre><prof_id>: Numeric parameter indicating the p Range: 0-2</prof_id></pre>	rofile identifier.
	<command/> : Numeric parameter indicating the HTTP server:	e command requested to
	0 – POST	
	1 – PUT	
	<resource>: String parameter indicating the HT of the request</resource>	TTP resource (uri), object
	<data_len>: Numeric parameter indicating the bytes</data_len>	data length to input in
	<pre><post_param>: Numeric/string parameter indic </post_param></pre>	
	Contenttype identifier, used only for POST com	
	by colon character (:) and a string that extends videntifier:	with sub-types the
	"0[:extension]" – "application/x-www-form-url	encoded" with ontional
	extension extension	encoued with optional
	"1[:extension]" – "text/plain" with optional extension	ension
	"2[:extension]" – "application/octet-stream" wi	th ontional extension
	"3[:extension]" – "multipart/form-data" with op	ntional extension
	other content – free string corresponding to othe possible sub-types	

page 599 of 717

80000ST10025a Rev. 24 - 2016-09-07

	<extra_header_line>: String parameter indicating optional HTTP header line</extra_header_line>
	If sending ends successfully, the response is OK; otherwise an error code is reported.
	Note: the HTTP request header sent with #HTTPSND always contains the
	"Connection: close" line, and it cannot be removed. When the HTTP server answer is received, then the following URC is put
	on the serial port:
	#HTTPRING:
	<prof_id>,<http_status_code>,<content_type>,<data_size> Where:</data_size></content_type></http_status_code></prof_id>
	<prof_id> is defined as above</prof_id>
	<http_status_code> is the numeric status code, as received from the server (see RFC 2616)</http_status_code>
	<content_type> is a string reporting the "Content-Type" header line, as received from the server (see RFC 2616)</content_type>
	<data_size> is the byte amount of data received from the server. If the server does not report the "Content-Length:" header line, the parameter value is 0.</data_size>
	Note: if there are no data from server or the server does not answer within the time interval specified in <b><timeout></timeout></b> parameter of <b>#HTTPCFG</b> command, then the URC <b>#HTTPRING <http_status_code></http_status_code></b> parameter has value 0.
	Note: the time required to receive the #HTTPRING unsolicited can be greater than the one specified in <timeout> parameter of #HTTPCFG command because it also includes the time needed to send the HTTP</timeout>
	request to the server.
	Note: after issuing #HTTPQRY command is not possible to change SSL configuration with #SSLSECCFG and #SSLSECDATA until #HTTPCFG
	is issued, because SSL connection remains up.
	Note: before receiving the #HTTPRING unsolicited, the following
	commands may answer with "+CME ERROR: Blocking read in progress": #HTTPQRY, #HTTPSND, #SGACT, #GPRS, #EMAILACT and
	#SEMAIL. Therefore, it is necessary to wait the unsolicited before issuing
AT#HTTPSND =?	them. Test command reports the supported range of values for the parameters

	<pre>#HTTPSND: (list of supported <prof_id>s),(list of supported <command/>s),<r_length>,(list of supported <data_len>s),<p_length>, <m_length> where: <r_length> - integer type value indicating the maximum length of parameter <resource>. <p_length> - integer type value indicating the maximum length of parameter <post_param>. <m_length> - integer type value indicating the maximum length of parameter <post_param>.</post_param></m_length></post_param></p_length></resource></r_length></m_length></p_length></data_len></r_length></prof_id></pre>
Example	Post 100 byte without "Content-type" header         AT#HTTPSND=0,0,"/",100         >>>         Post 100 byte with "application/x-www-form-urlencoded"         AT#HTTPSND=0,0,"/",100,0         >>>         Post 100 byte with "multipart/form-data" and extension         AT#HTTPSND=0,0,"/",100,"3:boundary=FormBoundary"         >>>

#### **3.5.7.16.4.** Receive HTTP server data - #HTTPRCV

<b>#HTTPRCV – receive HTTP se</b>	erver data SELINT 2
AT#HTTPRCV= <prof_id>[,&lt; maxByte&gt;]</prof_id>	Execution command permits the user to read data from HTTP server in response to a previous HTTP module request. The module is notified of these data by the <b>#HTTPRING</b> URC. The device shall prompt a three character sequence <less_than><less_than><less_than> (IRA 60, 60, 60) followed by the data. If reading ends successfully, the response is OK; otherwise an error code is reported.</less_than></less_than></less_than>
	Parameters: <prof_id> - Numeric parameter indicating the profile identifier. Range: 0-2 &lt; maxByte &gt; - Max number of bytes to read at a time Range: 0,64-1500 (default is 0 which means infinite size)</prof_id>
	Note: if <maxbyte> is unspecified, server data will be transferred all in once. Note: If the data are not present or the #HTTPRING <http_status_code></http_status_code></maxbyte>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 601 of 717

80000ST10025a Rev. 24 - 2016-09-07

	parameter has value 0, an error code is reported.
AT#HTTPRCV=?	Test command reports the supported range of values for <b><prof_id></prof_id></b> and <maxbyte> parameters in the format:</maxbyte>
	<pre># HTTPRCV: (list of supported <prof_id>s), (list of supported <maxbyte>s)</maxbyte></prof_id></pre>

#### 3.5.7.16.5. Receive and store HTTP server data - #HTTPRCVF

#HTTPRCVF – Receiv	e and store HTTP server data	<mark>SELINT 2</mark>
AT#HTTPRCVF=	Execution command allows to read data from a HTTP server, in	response to a
<prof_id>,</prof_id>	previous HTTP module request, and to save it into module's file system. The	
<dest_filename></dest_filename>	module is notified of this data by the <b>#HTTPRING</b> URC.	
[, <verbose>]</verbose>		
	Parameter:	
	<prof_id></prof_id>	
	- Numeric parameter indicating the profile identifier.	
	Range: 0-2	
	<dest filename=""></dest>	
	- Name of the destination file to be written into module's	s file system, string
	type (max 16 chars, case sensitive).	
	<verbose></verbose>	
	- 0: Disable verbose mode (default)	
	- 1: Enable verbose mode	
AT#HTTPRCVF=?	Test command reports the range of supported values for paramet	er <b><prof_id></prof_id></b> in the
	format:	
	#HTTPRCVF: (list of supported <prof_id>s)</prof_id>	
Note	When verbose mode is enabled, i.e. <b><verbose></verbose></b> is set to 1, the '#	' character is
	printed on the AT command port every time a chunk of data is re	
	written.	

#### 3.5.7.17. RSA AT Commands Set

## 3.5.7.17.1. Load the security data - #RSASECDATA

#RSASECDATA – Load the security data SELINT 2	
AT#RSASECDATA= <acti< th=""><th>Execution command allows to store, delete and read security data RSA key</th></acti<>	Execution command allows to store, delete and read security data RSA key
on>[, <size>]</size>	into NVM.
	Parameters:
	<action> - Action to do.</action>
	0 – Delete data from NVM.
	1 – Store data into NVM.
	2 – Get MD5 digest of data into NVM

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 602 of 717

	<b>Size&gt;</b> - Size of security data to be stored 12047 If the <b>Action&gt;</b> parameter is 1 (store data into NVM) the device responds to the command with the prompt '>' and waits for the data to store. To complete the operation send Ctrl-Z char (0x1A hex); to exit without writing the message send ESC char (0x1B hex). If data are successfully stored, then the response is OK; if it fails for some reason, an error code is reported. Note: Secured data has to be in PEM format Note: private keys with password ARE NOT supported. Note: It supports standard PKCS #1 and PKCS #8 Note: <b>size&gt;</b> parameter is mandatory if the <write> action is issued, but it has to be omitted for <delete> or <read> actions are issued.</read></delete></write>
AT#RSASECDATA?	Read command return the present of security data in NVM         #RSASECDATA: <privkeyisset> <privkeisset> is 1 if related data are stored into NVM otherwise 0.</privkeisset></privkeyisset>
AT#RSASECDATA=?	Test command returns the range of supported values for all the parameters: #RSASECDATA: (0-2),(1-2047)

## **3.5.7.17.2.** Encript data - #RSAENCRYPT

#RSAENCRYPT – Encrypt dat	a SELINT 2
AT#RSAENCRYPT= <keyty< th=""><th>Execution command encrypts data with RSA algorithm and use for</th></keyty<>	Execution command encrypts data with RSA algorithm and use for
pe>, <bytestoencrypt>[,<unsoli< th=""><th>padding PKCS1 standard</th></unsoli<></bytestoencrypt>	padding PKCS1 standard
cited>]	
	Parameters:
	<keytype> - Select the key type (Public or Private)</keytype>
	0 – Public Key
	1 – Private Key
	 <b>bytestoencrypt</b> > - number of bytes to be sent
	The device responds to the command with the prompt '>' <greater_than><space> and waits for the data to send.</space></greater_than>
	When < <b>bytestoencrypt</b> > bytes have been sent, operation is automatically completed.
	If data are successfully sent, then the response is <b>OK</b> .

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 603 of 717

If data sending fails for some reason, an error code is reported
<ul> <li><unsolicited> - show URC when RSA has finished the encryption ( If omitted is hidden )</unsolicited></li> </ul>
0: Hide 1: Show
Note: The URC has this form:
#RSAENCRYPT: <size_key_rsa></size_key_rsa>
where <size_key_rsa> is the size in bytes of the key used with the RSA algorithm</size_key_rsa>
The URC indicates that the calculation is finished and the buffer can be read
Note: the maximum value of <b><bytestoencrypt></bytestoencrypt></b> is:
<size_key_rsa> - 11</size_key_rsa>
(where 11 is the padding length in bytes used in PKCS#1)
Test command returns the range of supported values for parameters <keytype>, <bytestoencrypt>, <unsolicited></unsolicited></bytestoencrypt></keytype>
Note: if RSA key isn't loaded into NVM or there is an error in the key the command returns:
#RSAENCRYPT: (0,1),(0),(0,1)

## **3.5.7.17.3.** Decript data - #RSADECRYPT

#RSADECRYPT – Decrypt data S		<mark>INT 2</mark>
AT#RSADECRYPT= <keyty< th=""><th colspan="2"><b>PT=<keyty< b=""> Execution command decrypts data with RSA algorithm</keyty<></b></th></keyty<>	<b>PT=<keyty< b=""> Execution command decrypts data with RSA algorithm</keyty<></b>	
pe>, <bytestodecrypt>[,<unsoli< th=""><th></th><th></th></unsoli<></bytestodecrypt>		
cited>]	Parameters:	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 604 of 717

	<keytype> - Select the key type (Pubblic or Private)</keytype>		
	0 – Public Key		
	1 – Private Key		
	I - I IIVate Key		
	<bytestodecrypt> - number of bytes to be sent</bytestodecrypt>		
	The device responds to the command with the prompt '>'		
	<pre><greater_than< pre=""><space> and waits for the data to send.</space></greater_than<></pre>		
	When <b><bytestodecrypt></bytestodecrypt></b> bytes have been sent, operation is		
	automatically completed.		
	If data are successfully sent, then the response is <b>OK</b> .		
	If data sending fails for some reason, an error code is reported		
	<ul> <li><unsolicited> - show URC when RSA has finished the encryption ( If omitted is hidden )</unsolicited></li> </ul>		
	0: Hide		
	1: Show		
	Note: the URC has this form:		
	<pre>#RSADECRYPT: <size_key_rsa></size_key_rsa></pre>		
	where		
	<pre><size_key_rsa> is the size in bytes of the key used with the RSA</size_key_rsa></pre>		
	algorithm		
	The URC indicates that the calculation is finished and the buffer can be read		
	Note: the value of $-hvtestedeenverts$ is the size in hyter of the law $PSA$		
	Note: the value of <b><bytestodecrypt></bytestodecrypt></b> is the size in bytes of the key RSA		
AT#RSADECRYPT=?	Test command returns the range of supported values for parameters		
	<keytype> , <bytestodecrypt> , <unsolicited></unsolicited></bytestodecrypt></keytype>		
	Note: if RSA key isn't loaded into NVM or there is an error in the key the command returns:		
	#RSADECRYPT: (0,1),(0),(0,1)		

#### 3.5.7.17.4. Resul of RSA calculation - #RSAGETRESULT

<b>#RSAGETRESULT- Result of RSA calculation</b> SELINT 2		
AT#RSAGETRESULT	Execution command reads calculated data, 1	result of RSA encrypt or

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

80000ST10025a Rev. 24 - 2016-09-07

	decrypt. Note: If the RSA algorithm is idle or working mode, then the command returns ERROR
AT# RSAGETRESULT?	Read command returns the state of RSA encrypt or decrypt previously given <b>#RSAGETRESULT: <resultrsa></resultrsa></b> Where <b><resultrsa></resultrsa></b> can assume the following values: 0: Idle or working mode < 0: Error > 0: RSA encrypt/decrypt finished ( return size of key used in bytes )
AT# RSAGETRESULT=?	Test command returns <b>OK</b> result code

#### 3.5.7.18. GNSS AT Commands Set

#### 3.5.7.18.1. GNSS Receiver Configuration

## 3.5.7.18.1.1. GPS Device Type Set - \$GPSD

SGPSD - GPS Device Type ATSGPSD=		
	Set command defines which GNSS receiver is connected to the module. It	
<device_type></device_type>	reserves the Serial port #1 of the module (TRACE) to receive the data stream	
[, <sub_device_type>]</sub_device_type>	coming from the attached GNSS module.	
	Parameter:	
	<device type=""></device>	
	0 - none; the serial port is not connected to the GNSS device and availabl standard use (default for all modules except for GE864-GPS and GE910-	
	GNSS)	
	<ul><li>1 - currently has no meaning, maintained for backward compatibility</li><li>2 - serial port connected to the GNSS serial port: controlled mode (default for</li></ul>	
	GE864-GPS). This configuration is for SiRF StarIV-based GNSS modules	
	support only (JF2-FLASH, JF2-ROM and JF2-ROM+EEPROM)	
	3 - serial port connected to the GNSS serial port: controlled mode. This	
	configuration is for SiRF StarIV-based GNSS modules support only (JN3- ELASH, JN3 POM and JN3 POM+EEPPOM). This value is not surroutly	
	FLASH, JN3-ROM and JN3-ROM+EEPROM). <u>This value is not currently</u> supported on GE910-GNSS.	
	4 - serial port connected to the GNSS serial port: controlled mode (default for	
	GE910-GNSS). This configuration is for ST TeseoII-based GPS modules	
	support only (SL869)	
	5 - serial port connected to the GNSS serial port: controlled mode. This	
	configuration is for SiRF StarV-based GNSS modules support only (SE868-V2)	
	6 - serial port connected to the GNSS serial port: controlled mode. This	
	configuration is for MediaTek MT3333-based GNSS modules support only	
	(e.g. SL871)	
	<sub_device type=""></sub_device>	
	0 - Flash device: Flash based module (default).	
	1 - ROM device: ROM based module.	
	2 - ROM + EEPROM (or SPI Flash) device: EEPROM (or SPI Flash) based	
	module.	
	Note: The <b><sub_device type=""></sub_device></b> can be used with SiRF Star-based GNSS	
	modules (JF2/JN3/SE868-V2) only, i.e. when AT\$GPSD=2, AT\$GPSD=3 or	
	AT\$GPSD=5.	
	Note: the current setting is stored through <b>\$GPSSAV</b>	
AT\$GPSD?	Read command reports the current value of <b><device_type></device_type></b> and	
	<sub_device_type> parameters, in the format:</sub_device_type>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 607 of 717

80000ST10025a Rev. 24 - 2016-09-07

SGPSD - GPS Devic	e Type Set	SELINT 2
	<b>\$GPSD:</b> <device_type>,<sub_device_type></sub_device_type></device_type>	
AT\$GPSD=?	<b>T</b> \$GPSD=? Test command reports the range of supported values for paramet <device type="">,<sub device="" type=""></sub></device>	
Example	AT\$GPSD=0 OK	
	AT\$GPSD=2,1 OK	
	AT\$GPSD=4,2 ERROR	

## 3.5.7.18.1.2. GPIO Configuration for GPS control - \$GPSGPIO

<mark>\$GPSGPIO – GPIO Co</mark> r	figuration for GPS control SELINT 2
AT\$GPSGPIO=	Execution command sets the GPIO pins to be used to drive JF2 (SE868),
<on_off>,</on_off>	JN3 (SL868), SL869, SE868-V2 and SL871 GNSS modules.
<system_on>,</system_on>	
<boot>,</boot>	Parameters:
<reset></reset>	<b>on_off&gt;</b> - GPIO pin number to be used to drive the JF2/JN3/SL869/SE868-V2's ON-OFF signal (default = 4 fo SW release 10.0x.xxx and 16.0x.xxx, 1 for SW release 13.00.xxx) <b>system_on&gt;</b> - GPIO pin number to be used to drive the JF2/SE868- V2's SYSTEM-ON signal (default = 5 for SW release 10.0x.xxx and 16.0x.xxx, 2 for SW release 13.00.xxx <b>boot&gt;</b> - GPIO pin number to be used to drive the JF2-Flash/JN3- Flash/SL869's BOOT signal (default = 6 for SW release 10.0x.xxx and 16.0x.xxx, 3 for SW release 13.00.xxx) <b>reset&gt;</b> - GPIO pin number to be used to drive the JF2-Flash/JN3-Flash's RESET signal (default = 7 for SW release 10.0x.xxx and 16.0x.xxx, 4 for SW release 13.00.xxx)
	Note: the GPIO configuration specified through this command must be coherent with the specific GNSS module that has to be used, i.e. the configuration specified through the AT\$GPSD command. Therefore the GPIOs corresponding to unnecessary signals (e.g. <system_on>, <boot> and <reset> for a JN3-ROM) should be set to zero: this allows to reserve and use the minimum number of GPIOs. Note: See the Hardware User Guide to check the number of available</reset></boot></system_on>
	GPIO pins. Note: the GPIO configuration correctness and functionality (i.e. possible conflicts with the GPIO configuration applied through <b>AT#GPIO</b> ) are under the customer's sole responsibility.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 608 of 717

80000ST10025a Rev. 24 - 2016-09-07

	Note (SW release 10.0x.xxx and 16.0x.xxx only): if any of the V24 signals has been previously configured as GPIO through <b>AT#V24CFG</b> , it can be set by the extended GPIO range (GPIO # from 128 to 133) to drive the external GNSS receiver. Extended GPIOs and V24 signals correspondence is shown below:
	$\begin{array}{c} \text{GPIO \#128} \rightarrow \text{DCD} \\ \text{GPIO \#129} \rightarrow \text{CTS} \end{array}$
	$GPIO \#130 \rightarrow RING$
	$\begin{array}{c} \text{GPIO \#131} \rightarrow \text{DSR} \\ \text{GPIO \#132} \rightarrow \text{DTR} \end{array}$
	GPIO #132 $\rightarrow$ RTS
	See the Example section below for an example on how to set such GPIOs. An ERROR is returned whenever trying to set a GPIO, from the extended GPIO range, its corresponding V24 signal has not been previously configured as GPIO through <b>AT#V24CFG</b> .
	Note: the current GPIO configuration can be stored through AT\$GPSSAV
AT\$GPSGPIO?	Read command reports the currently selected configuration in the format:
	\$GPSGPIO: <on_off>,<system_on>,<boot>,<reset></reset></boot></system_on></on_off>
AT\$GPSGPIO=?	Test command reports supported range of values for parameters <b><on_off></on_off></b> , <b><system_on></system_on></b> , <b><boot></boot></b> and <b><reset></reset></b>
	Note (SW release 10.0x.xxx and 16.0x.xxx only): the extended GPIO range is reported along with the available customer GPIO range.
Example	- For a JF2-Flash (AT\$GPSD=2,0):
	AT\$GPSGPIO=4,5,6,7
	ОК
	AT\$GPSGPIO?
	\$GPSGPIO: 4,5,6,7
	ОК
	- For a JF2-ROM (AT\$GPSD=2,1):
	AT\$GPSGPIO=4,5,0,0 OK
	OR
	AT\$GPSGPIO=4,5,6,7 OK

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

page 609 of 717

	AT\$GPSGPIO? \$GPSGPIO: 4,5,0,0
	OK
	- For a JF3-ROM (AT\$GPSD=3,1):
	AT\$GPSGPIO=4,0,0,0 OK
	OR
	AT\$GPSGPIO=4,5,6,7 OK
	AT\$GPSGPIO? \$GPSGPIO: 4,0,0,0
	OK
	SW release 10.0x.xxx and 16.0x.xxx only: - Set Command to configure GPIOs from extended GPIO range:
	AT\$GPSGPIO=131,132,130,128 OK
	- Test Command showing extended GPIO range:
	AT\$GPSGPIO=? \$GPSGPIO: (1-8,128-131),(1-8,132-133),(1-8,128-131),(1-8,128-131)
	ОК
Note	The Command is available in "Controlled Mode" only

#### 3.5.7.18.1.3. Set the GPS serial port speed - \$GPSSERSPEED

SGPSSERSPEED – Set the GPS serial port speed SELINT		SELINT 2	
AT\$GPSSERSPEED= <speed></speed>	Execution command sets the GPS serial port communication speed.		
Parameters: < <b>speed&gt;</b> - 4800(default) 9600			
	Note: This command can be used with SiRF-bas JF2, JN3 and SE868-V2 ( <b>AT\$GPSD=2, AT\$G</b>	· · · · · · · · · · · · · · · · · · ·	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 610 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>\$GPSSERSPEED – Set the</b>	GPS serial port speed	SELINT 2
	AT\$GPSD=3, AT\$GPSD=3,1, AT\$GPSD=3,2 or AT\$GPSD=5,2), and	
	MT3333-based GNSS modules such as SL871 (AT\$GPSD=6).	
	Note: the current setting is stored through <b>\$GPSSAV</b> .	
	Note: The module must be restarted to use the new configu	uration
AT\$GPSSERSPEED?	Read command returns the selected serial speed in the format	
	\$GPSSERSPEED: <speed></speed>	
AT\$GPSSERSPEED=?	Test command returns the available range for <b><speed></speed></b>	
Example	AT\$GPSSERSPEED = 4800	
	OK	

#### 3.5.7.18.1.4. **GPS Controller Power Management - \$GPSP**

<b>\$GPSP - GPS Control</b>	ler Power Management	SELINT 2
AT\$GPSP= <status></status>	> Set command allows to manage power-up or down of the GPS controller	
	Parameter: <status> 0 - GPS controller is powered down (default for all modules, exc GPS) 1 - GPS controller is powered up (default for GE864-GPS) Note: for the GPS product: if the GPS controller is powered down is enabled they'll both be also powered off.</status>	•
AT\$GPSP?	Note: the current setting is stored through \$GPSSAV           Read command reports the current value of the <status> parameter, in the format</status>	
	\$GPSP: <status></status>	
	Note: the <b><status></status></b> parameter does not report the real power status module but only the value set through the set command above. The parameter, once stored through the <b>AT\$GPSSAV</b> command, spec status of the GPS module (ON or OFF) at system startup	e <status></status>
AT\$GPSP=?	Test command reports the range of supported values for parameter	<status></status>
Example	AT\$GPSP=0 OK	
Note	The command is available in "controlled mode" only	

#### **GPS Antenna Type Definition - \$GPSAT** 3.5.7.18.1.5.

<mark>\$GPSAT – GPS Antenn</mark>		a LNA Control	SELINT 2	
	AT\$GPSAT=	Set command selects the GPS antenna used.		
	8:35 8:45 0:55			A

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

page 611 of 717

<type></type>			
	Parameter: <type></type>		
	0 - Disable External GPS Antenna LNA (default):		
	GPS chip Internal LNA Gain Mode is High and GPS_EXT_LNA_EN signal is		
	Low		
	1 - Enable External GPS Antenna LNA:		
	GPS chip Internal LNA Gain Mode is Low and GPS_EXT_LNA_EN signal is		
	High		
	Note: the current setting is stored through <b>\$GPSSAV</b>		
AT\$GPSAT?	Read command returns the current value of <b><type></type></b> in the format:		
	\$GPSAT: <type></type>		
AT\$GPSAT=?	Test command reports the range of supported values for parameter <b><type></type></b>		
Example	AT\$GPSAT=1		
N-4-	OK		
Note	The command is available in "controlled mode" only		
	This command is currently available for SirfIV-based GPS modules (JF2 and JN3) only, i.e. whenever is AT\$GPSD=2 or AT\$GPSD=3.		
	This command must be issued only when the GPS receiver is operating in Full Power Mode (see <b>\$GPSPS)</b> , otherwise it might have no effect		
	Since the <b>AT\$GPSAT</b> command performs a hardware reconfiguration of the GPS receiver, the issuing of two consecutive <b>AT\$GPSAT</b> commands should be avoided, otherwise the reconfiguration might fail: an <b>ERROR</b> is returned in the latter case		
	If the <b><type></type></b> parameter has been set to 1, the External GPS Antenna LNA is directly driven by the GPS receiver according to its current power mode (i.e. the External GPS Antenna LNA is turned off whenever the GPS receiver is in power saving mode)		
	Please refer to the HW User Guide for the compatible GPS antennas and their usage		

## 3.5.7.18.1.6. Save GPS Parameters Configuration - \$GPSSAV

SGPSSAV - Save GPS Parameters Configuration SELINT 2			
AT\$GPSSAV	SAV Execution command stores the current GNSS parameters in the NVM of the G		
	nodule.		
AT\$GPSSAV=?	SAV=? Test command returns the OK result code		
Example	AT\$GPSSAV		
1	OK		
Note	The module must be restarted to use the new configuration	on	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 612 of 717

#### 3.5.7.18.1.7. Restore To Default GPS Parameters - \$GPSRST

<b>\$GPSRST - Restore To</b>	Default GPS Parameters	SELINT 2
AT\$GPSRST	Execution command resets the GNSS parameters to "Factory De	fault"
	configuration and stores them in the NVM of the GSM module.	
AT\$GPSRST=?	Test command returns the <b>OK</b> result code	
Example	AT\$GPSRST	
1	OK	
Note	The module must be restarted to use the new configuration	

#### 3.5.7.18.1.8. Set CPU Clock for ST TESEOII - \$GPSSTCPUCLK

<b>\$GPSSTCPUCLK – Set CPU</b>	Clock for ST TESEOII	SELINT 2
AT\$GPSSTCPUCLK=	Set command allows changing the CPU Clock Freque	
<cpu_clock></cpu_clock>	TESEOII-based GNSS modules (e.g. SL869, GE910-	GNSS).
	Parameter:	
	< <b>cpu_clock&gt;:</b> 0 - 52 MHz	
	1 - 104  MHz	
	2 - 156  MHz	
	3 - 208  MHz	
	Note: This command can be used with ST TE	ESEOII-based
	GNSS modules only (AT\$GPSD=4).	
	Note: The <cpu_clock> setting is saved into</cpu_clock>	TESEOII NVM
	and retained until a NVM erase or a next firm	
	the GNSS receiver is performed.	10
AT\$GPSSTCPUCLK?	Read command reports the current setting for the CPU the format:	J Clock Frequency in
	\$GPSSTCPUCLK: <cpu_clock></cpu_clock>	
	Note: An ERROR is returned if the CPU Clock Frequ	ency has never
	been changed.	
	Please refer to the Software Application Note of the G	SNSS receiver used
	for further information on the CPU Clock Frequency	
AT\$GPSSTCPUCLK=?	Test command reports the supported range of values f	
	<cpu_clock></cpu_clock>	

### 3.5.7.18.2. GNSS Power Saving Modes Management

3.5.7.18.2.1.	Set The	GPS Module	In Power	<b>Saving Mode</b>	e - <b>\$GPSPS</b>
0.0		OI S INIGALIE		Suring hier	

<mark>\$GPSPS - Set The C</mark>	<b>FS Module In Power Saving Mode</b>	SELINT 2
AT\$GPSPS=	Set command allows setting the GNSS module in Power	saving mode.
<mode></mode>		
[, <ptf_period>]</ptf_period>	Parameters:	
	<mode> - the GNSS receiver can operate in four power</mode>	
	0 – Full Power Mode, power saving disabled (default).	
	known as Continuous Navigation mode. This is the	
	mode and supports the most dynamic motion scenar	
	1 – TricklePower Mode. TricklePower mode is a duty of	
	system selects a minimum rate of navigation solutio	n updates and minimizes
	average current.	
	2 – Push-To-Fix Mode. Push-to-Fix mode (PTF) is desi	
	require infrequent position reporting. The SiRF Star	6 5 5
	the Hibernate system power state but wakes up period	
	time, ephemeris data and RTC calibration. A pulse of	—
	line to the receiver acts as a position update request.	
	3 – Micro Power Mode. Micro Power mode (MPM) is a	
	maintenance mode that delivers continuous availabi	
	solution. It is intended for low dynamics application	
	maintains ephemeris data as well as a low level of u	
	of position, time, and receiver clock error. It achieve	
	SiRFStar receiver in the Hibernate power state and	leaving Hibernate only as
	needed to maintain these conditions.	
	4 – SmartGNSS I Mode. SmartGNSS I autonomously r	
	usage based on signal conditions to save power. The	
	fewer system resources during strong signal condition	
	resources during weak signal conditions in order to	maintain navigation
	performance.	
	5 – SmartGNSS II Mode. SmartGNSS II includes the b	
	and achieves further power reduction by minimizing	g the usage of the
	secondary GNSS constellation	
	<ptf_period> - Push-To-Fix update period, numeric va</ptf_period>	alue in seconds: when
	mode is Push-To-Fix, the receiver turns on periodica	
	parameter (default value is 1800 sec). This parameter when <b><mode>=</mode></b> 2.	the uses have meaning only
	when <b>moue</b> -2.	
	Note: Push-To-Fix and Micro Power modes support is no	ot available for JN3
	because it does not have an ON OFF input. Therefore, w	
	Full Power and TricklePower modes are supported. In ac

80000ST10025a Rev. 24 - 2016-09-07

<b>\$GPSPS - Set The</b>	GPS Module In Power Saving Mode	SELINT 2
	<ptf_period> parameter is accepted but not used.</ptf_period>	
	Note: Micro Power Mode support is not currently available	ble for SE868-V2.
	Note: SmartGNSS I and SmartGNSS II Modes are availa SirfStar V Flash-based GNSS receivers only (e.g. SE868	
AT\$GPSPS?	Read command returns the current power saving mode and push-to-fix period, in the format: \$GP\$P\$: <mode>,<ptf period=""></ptf></mode>	
AT\$GPSPS=?	Test command returns the available range for <b><mode></mode></b> ar	nd <ptf period=""></ptf>
Note	Available in "controlled mode" only	_
	This command is currently available for Sirf-based GNSS SE868-V2 and SE868-V3) only, i.e. whenever is AT\$GP AT\$GPSD=5.	

## 3.5.7.18.2.2. Wake Up GPS From Power Saving Mode - \$GPSWK

<mark>\$GPSWK - Wake U</mark>	p GPS From Power Saving Mode SELINT 2
AT\$GPSWK	Execution command allows waking up the GNSS module when a power saving or standby mode has been enabled.
	Notes for Sirf-based GNSS modules only:
	If the GNSS module has been configured to work in TricklePower Mode, it will start up, get a fix and then continue to work in power saving mode.
	If the GNSS module has been configured to work in Push-To-Fix Mode, issuing AT <b>\$GPSWK</b> allows to wake up it before the Push-To-Fix update period; once a new fix will be got, the GNSS module will return to Push-To-Fix mode.
	If the GNSS module has been configured to work in Micro Power Mode, it will be set to Full Power Mode (same as issuing AT\$GPSPS=0 command).
	Notes for MediaTek MT3333-based GNSS modules only:
	If the GNSS module has been configured to work in any of the supported Standby modes, the current Standby mode will be disabled.
AT\$GPSWK=?	Test command returns the <b>OK</b> result code
Note	Available in "controlled mode" only
	This command is currently available for Sirf-based and MediaTek MT3333-based GNSS modules (e.g. JF2, JN3, SE868-V2 and SL871), i.e. whenever is AT\$GPSD=2, AT\$GPSD=3, AT\$GPSD=5 or AT\$GPSD=6.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 615 of 717

<b>SGPSMTKPPS - Set the P</b>	eriodic Power Saving Mode for MTK SELINT 2
AT\$GPSMTKPPS=	Set command allows setting the MediaTek MT3333-based GNSS modules'
<mode>[,</mode>	Periodic Power Saving Mode settings.
<runtime>,</runtime>	
<sleeptime>,</sleeptime>	Parameters:
<second_runtime>,</second_runtime>	<mode> - the GNSS receiver can operate in five different Periodic Power</mode>
<second_sleeptime>]</second_sleeptime>	Saving modes:
	0 – Normal mode (Periodic Power Saving mode disabled)
	1 – Periodic Backup mode
	2 – Periodic Standby mode
	$8 - AlwaysLocate^{TM}$ standby mode
	$9 - AlwaysLocate^{TM}$ backup mode
	<runtime> - Full Power (or Normal) Period in milliseconds</runtime>
	1000518400000
	<sleeptime> - Low Power Period (backup/standby) in milliseconds</sleeptime>
	1000 518400000
	<second_runtime> - Full Power (or Normal) Period in milliseconds for</second_runtime>
	extended acquisition if GNSS acquisition fails during <b><runtime></runtime></b>
	0 - Disable
	1000518400000 – Enable (should be larger than the set <b><runtime></runtime></b> value)
	<second_sleeptime> - Low Power Period (backup/standby) in milliseconds for</second_sleeptime>
	extended sleep if GNSS acquisition fails during <b><runtime></runtime></b>
	0 – Disable
	1000518400000
	Note: The <b><runtime></runtime></b> , <b><sleeptime></sleeptime></b> , <b><second_runtime></second_runtime></b> ,
	<pre><second sleeptime=""> parameters must be set if <mode> is 1 or 2 otherwise</mode></second></pre>
	ERROR is returned
	Note: The <b><runtime></runtime></b> , <b><sleeptime></sleeptime></b> , <b><second_runtime></second_runtime></b> ,
	<second_sleeptime> parameters must be omitted if <mode> is 0, 8 or 9</mode></second_sleeptime>
	otherwise ERROR is returned
	Note: <b><mode></mode></b> values different from 0 can be set only when the GNSS module
	is powered ON and operating in Full (or Normal) Power mode.
	Note: the <b><mode></mode></b> value 0 can be set only when the GNSS module is operating
	in any of the Periodic Power Saving modes. Issuing <b>AT\$GPSMTKPPS=0</b> the
	GNSS module switches back to Full (or Normal) Power mode as soon as it
	wakes up according to the <b><sleeptime></sleeptime></b> and <b><second_sleeptime></second_sleeptime></b> values set.
AT\$GPSMTKPPS?	Read command returns the current Periodic Power Saving mode in the format:
	\$GPSMTKPPS:

#### 3.5.7.18.2.3. Set the Periodic Power Saving Mode for MTK - \$GPSMTKPPS

<mode>[,<runtime>,<sleeptime>,<second runtime>,<second sleeptime>]

<b>\$GPSMTKPPS - Set the Periodic Power Saving Mode for MTK SELINT 2</b>		SELINT 2
AT\$GPSMTKPPS=?	Test command reports the supported range of values for parameters	
	<mode>,<runtime>,<sleeptime>,<second_runti< th=""><th>me&gt;,<second_sleeptime></second_sleeptime></th></second_runti<></sleeptime></runtime></mode>	me>, <second_sleeptime></second_sleeptime>
Note	Available in "controlled mode" only	
	This command is currently available for MediaTek modules (e.g. SL871) only, i.e. whenever is AT\$G	

## 3.5.7.18.2.4. Set Standby Mode for MTK - \$GPSMTKSTDBY

<b>\$GPSMTKSTDBY - Set St</b>	andby Mode for MTK SELINT 2
AT\$GPSMTKSTDBY= <mode></mode>	Set command allows setting the MediaTek MT3333-based GNSS modules in Standby mode.
	<ul> <li>Parameters:</li> <li><mode> - the GNSS receiver can operate in three Standby modes:</mode></li> <li>0 - Standby Mode disabled (default). This value cannot be set and may be only reported by the read command.</li> <li>1 - Stop Mode</li> <li>2 - Sleep Mode</li> <li>Note: Stop or Sleep Standby modes can be set only when the GNSS module is powered ON and operating in full power mode.</li> <li>Note: the GNSS module can be forced to exit from the standby modes through the AT\$GPSWK command</li> </ul>
AT\$GPSMTKSTDBY?	Read command returns the current Standby mode in the format: <b>\$GPSMTKSTDBY: <mode></mode></b>
AT\$GPSMTKSTDBY=?	Test command returns the available range for <b><mode></mode></b>
Note	This command is available in "controlled mode" only, for MediaTek MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT\$GPSD=6.

### 3.5.7.18.2.5. Set MTK Communication Ports - \$GPSMTKSETCOMPORT

<b>SGPSMTKSETCOMPORT – Set MT</b>	<b>'K Communication Ports</b> SELINT 2
AT\$GPSMTKSETCOMPORT=	Set command allows changing the communication port
<port>,</port>	configuration on MediaTek MT3333-based GNSS receivers.
<mode>,</mode>	
<baudrate>,</baudrate>	<pre>&gt; - Communication Port Number</pre>
<protocol></protocol>	1 – UART 0 (value not currently supported)
	2 – UART 1 (default)
	<mode> - Interface Operating Mode</mode>
	1 – NONE
	2 – UART
	3 – I2C

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 617 of 717

80000ST10025a Rev. 24 - 2016-09-07

	<baudrate> - Baudrate</baudrate>
	4800
	9600
	19200
	38400
	57600
	115200
	230400
	460800
	921600
	<pre>&gt;rotocol&gt; - Communication Protocol</pre>
	1 – NMEA
	2 – RTCM
AT\$GPSMTKSETCOMPORT?	Read command reports the current communication port
	configuration in the format:
	<b>\$GPSMTKSETCOMPORT:</b>
	<port>,<mode>,<baudrate>,<protocol></protocol></baudrate></mode></port>
AT\$GPSMTKSETCOMPORT=?	Test command reports the supported range of values for
	parameters:
	<pre><port>,<mode>,<baudrate>,<protocol></protocol></baudrate></mode></port></pre>
Note	Available in "controlled mode" only
	This command is available for MediaTek MT3333-based GNSS
	modules (e.g. SL871) only, i.e. whenever is AT\$GPSD=6.

## 3.5.7.18.3. GNSS General Management

#### 3.5.7.18.3.1. GPS Software Version - \$GPSSW

<b>\$GPSSW - GPS Sof</b>	ftware Version SELINT 2
AT\$GPSSW	Execution command returns the GNSS module software version in the format: <b>\$GPSSW: <sw version=""></sw></b>
AT\$GPSSW?	Read command has the same meaning as the Execution command
AT\$GPSSW=?	Test command returns the <b>OK</b> result code
Example	For SiRF IV-based modules (e.g. JF2, JN3 and GE864-GPS): AT\$GPSSW \$GPSSW: GSD4e_4.0.2-P1 05/26/2010 146 OK
	For STM TeseoII-based modules (e.g. SL869 and GE910-GNSS): AT\$GPSSW \$GPSSW: SL869 v3.0.0.1 -STD -N96 OK
	For SiRF V-based modules (e.g. SE868-V2):

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 618 of 717

80000ST10025a Rev. 24 - 2016-09-07

<mark>\$GPSSW - G</mark> l	PS Software Version	SELINT 2
	AT\$GPSSW \$GPSSW: 5xp_5.5.2-R32+5xpt_5.5.2-R32 OK	
	For MT3333-based modules (e.g. SL871): AT\$GPSSW \$GPSSW: AXN_3.60_3333_14080800,C012,MT33-1.,1.106	
	ОК	
Note	The command is available in "controlled mode" only	
	The GNSS Module software version is available in few module startup	seconds at first GPS

## 3.5.7.18.3.2. GPS Reset - \$GPSR

\$GPSR - GPS Reset		<mark>SELINT 2</mark>
AT\$GPSR=	Execution command allows resetting the GNSS controller.	
<reset_type></reset_type>	<ul> <li>0 – Factory reset: this option clears all the GNSS memory including Clock Drift, Extended Ephemeris files stored into flash memory and applied software patch in case a ROM-based receiver is being used.</li> <li>1 – Coldstart (No Almanac, No Ephemeris): this option clears all data that is currently stored in the internal memory of the GNSS receiver including Last Position, Almanac, Ephemeris and Time. However, the stored Clock Drift and Extended Ephemeris are retained.</li> <li>2 – Warmstart (No ephemeris): this option clears Ephemeris and Last Position only. Almanac and Extended Ephemeris are retained.</li> <li>3 – Hotstart (with stored Almanac and Ephemeris): the GNSS receiver restarts by using all data that is currently stored in the internal memory of the GNSS receiver restarts by using all data that is currently stored in the internal memory of the GNSS receiver: valid Almanac, Ephemeris and Extended Ephemeris are therefore retained and used.</li> </ul>	
AT\$GPSR=?	Test command reports the range of supported values for parameter <b><reset_type></reset_type></b>	
Example	AT\$GPSR=0 OK	
Note	The command is available in "controlled mode" onlyThis command must be issued only when the GNSS receiver is opPower Mode (see \$GPSPS), otherwise it might have no effectSince the Factory Reset ( <reset_type>=0) performs a hardware re</reset_type>	-
	the GNSS receiver, the issuing of two consecutive <b>AT\$GPSR</b> cor avoided, otherwise the reconfiguration might fail: an <b>ERROR</b> is r latter case	nmands should be

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 619 of 717

80000ST10025a Rev. 24 - 2016-09-07

## 3.5.7.18.3.3. Direct Access to GPS Module - \$GPSCON

<b>\$GPSCON - Direct Acc</b>	cess to GPS Module	SELINT 2
AT\$GPSCON	Execution command allows setting the GSM baseband in transpato have a direct access to the serial port of the GNSS module. The will directly transfer the received data to the GNSS module (and without checking or elaborating it. Note: the command can be used in "controlled mode" only. Note: in case of an incoming call from GSM, this will be visible of serial port. Note: the escape sequence is "+++" The suggested Serial Port Speed for SirfIV-based modules (e.g. 57600. The suggested Serial Port Speed for SirfV-based modules (e.g. S 115200.	arent mode in order ne GSM module vice-versa), on the RING pin JF2 and JN3) is
AT\$GPSCON=?	Test command returns the <b>OK</b> result code	

## 3.5.7.18.4. GNSS Positioning Information

#### 3.5.7.18.4.1. Unsolicited NMEA Data Configuration - \$GPSNMUN

<b>\$GPSNMUN - Unsolicite</b>	d NMEA Data Configuration SELINT 2
AT\$GPSNMUN=	Set command allows to activate an Unsolicited stream of GNSS data (in
<enable></enable>	NMEA format) through the standard cellular module serial port and
[, <gga>,<gll>,</gll></gga>	defines which NMEA sentences will be relayed
<gsa>,<gsv>,</gsv></gsa>	
<rmc>,<vtg>]</vtg></rmc>	Parameters:
	<enable></enable>
	0 - NMEA data stream de-activated (default)
	1 - NMEA data stream activated with the following unsolicited response syntax:
	\$GPSNMUN: <nmea sentence=""><cr></cr></nmea>
	2 - NMEA data stream activated with the following unsolicited response syntax:
	<nmea sentence=""><cr></cr></nmea>
	3 - dedicated NMEA data stream; it is not possible to send AT
	commands; with the escape sequence '+++' the user can return to command mode
	<gga> - Global Positioning System Fix Data</gga>
	0 - disable (default)
	1 - enable

	NMEA 0183 Specifications
Note	For products without built-in GNSS receiver:
	The command is available in "Controlled Mode" only
	The available NMEA sentences and their talker (GN, GP and GL) depend on the GNSS receiver used and its firmware configuration. Please refer to the Software Application Note of the GNSS receiver used for further information on the available NMEA data set.
	SirfIV-based GNSS modules (e.g. JF2, JN3):
	The fields PDOP and VDOP are not available
	Products without built-in GNSS receiver are: HE910-D, HE910-EUD, HE910-EUR, HE910-NAD, HE910-NAR, UE910-EUD, UE910-EUR, UE910-NAR, UE910-NAD, UL865-EUR, UL865-EUD, UL865-NAR, UL865-NAD.

### 3.5.7.18.4.2. Get Acquired Position - \$GPSACP

<b>\$GPSACP - Get</b>	Acquired Position SELINT 2	
AT\$GPSACP	Execution command returns information about the last GPS position in the for	rmat
	\$GPSACP: <utc>,<latitude>,<longitude>,<hdop>,<altitude>,</altitude></hdop></longitude></latitude></utc>	
	<fix>,<cog>,<spkm>,<spkn>,<date>,<nsat></nsat></date></spkn></spkm></cog></fix>	
	where:	
	<pre><utc> - UTC time (hhmmss.sss) referred to GGA sentence</utc></pre>	
	<li>latitude&gt; - format is ddmm.mmmm N/S (referred to GGA sentence)</li>	
	where:	
	dd - degrees	
	0090	
	mm.mmmm - minutes	
	00.000059.9999

	0112	
	yy - year	
	0099 - 2000 to 2099	
	<pre><nsat> - nn - Total number of satellites in use (referred to GGA)</nsat></pre>	A sentence)
	0012	
AT\$GPSACP?	Read command has the same meaning as the Execution command	
AT\$GPSACP=?	Test command returns the <b>OK</b> result code	
Example	AT\$GPSACP	
	\$GPSACP:080220.479,4542.82691N,01344.26820E,259.07,3,	2.1,0.1,0.0,0.0,27070
	5,09	
	OV	
	OK	11 ( 1 ( 1
Note	If the GNSS receiver is turned off or its serial line is not physic	ally connected to the
	GSM, the answer might be empty as shown below.	
	AT\$GPSACP \$GPSACP	
	\$GPSACP:	
	OK	
	GE910-GNSS only: since latitude and longitude fields are take \$GPGGA5 NMEA sentence, they are reported in the format DI	

## 3.5.7.18.5. GNSS SiRFInstantFix<sup>TM</sup>

## **3.5.7.18.5.1. GPS SiRFInstantFix<sup>™</sup> - \$GPSIFIX**

80000ST10025a Rev. 24 – 2016-09-07

<mark>\$GPSIFIX – GPS SiRFI</mark> n	IstantFix <sup>TM</sup> SELINT 2
AT\$GPSIFIX=	Set command enables/disables SiRFInstantFix <sup>™</sup> feature available on
<enable>[,</enable>	SiRF StarIV based modules.
<cgee>,</cgee>	
<sgee>[,</sgee>	Parameters:
<update>]]</update>	<pre><enable> - SiRFInstantFix Usage</enable></pre>
"hause 11	0 - Disable (default)
	1 – Enable
	<cgee> - Client Generated Extended Ephemeris (CGEE)</cgee>
	0 - Disable
	1 - Enable (default)
	<sgee> - Server Generated Extended Ephemeris (SGEE)</sgee>
	0 - Disable (default)
	1 – Enable
	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
	0 – Upon Aiding Data Requests coming from GPS chip 1168 – Update rate in hours (168 is the max update rate in case of 7-days
	SGEE files usage)
	Note: SiDEInstantEin nonemators are stored in NVM along with all
	Note: SiRFInstantFix parameters are stored in NVM, along with all
	current GPS parameters, if <b>OK</b> is returned (same as AT\$GPSSAV)
	Note: if < anable>-0 the rest of noremators must be emitted otherwise
	Note: if <b><enable>=0</enable></b> , the rest of parameters must be omitted otherwise <b>ERROR</b> is returned
	ERROR IS returned
	Note: if <anable>-1 and the rest of norematers is emitted the default</anable>
	Note: if <b><enable>=1</enable></b> and the rest of parameters is omitted, the default
	configuration, or a previous stored one, is used
	Note: if < sqaa>-1, the <undate> noremater must be set otherwise</undate>
	Note: if <b><sgee>=1</sgee></b> , the <b><update></update></b> parameter must be set otherwise <b>ERROR</b> is returned
	ERROR IS returned
	Notes if <pre>condition to the following LIDC is used to warm according to the</pre>
	Note: if <b><sgee>=1</sgee></b> the following URC is used to warn, according to the
	<update> value, that the SGEE file has to be updated:</update>
	QUEIVEV COPP File Inter Demonster
	\$SIFIXEV: SGEE File Update Requested
	Note: If <b><sgee>=0</sgee></b> , the <b><update></update></b> parameter must be omitted otherwise
	ERROR is returned
	Note: SiDEInstantEin default and he meters di
	Note: SiRFInstantFix default configuration may be restored by issuing the
	AT\$GPSRST command
AT\$GPSIFIX?	Read command reports the currently selected SiRFInstantFix
	configuration in the format:
	\$GPSIFIX: <enable>[,<cgee>,<sgee>[,<update>]]</update></sgee></cgee></enable>
AT\$GPSIFIX=?	Test command reports the supported range of values for parameters
	<enable>, <cgee>, <sgee>,<update></update></sgee></cgee></enable>
Example	AT\$GPSIFIX=0
	OK

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 624 of 717

80000ST10025a Rev. 24 - 2016-09-07

	AT\$GPSIFIX=1,1,0 OK
Note	The Command is available in "Controlled Mode" only

## 3.5.7.18.5.2. GNSS SiRFInstantFix<sup>™</sup> - \$GNSSIFIX

<b>\$GNSSIFIX – GNSS SiR</b>	FInstantFix <sup>TM</sup> SELINT 2
AT\$GNSSIFIX=	Set command enables/disables the SiRFInstantFix <sup>™</sup> feature available on
<navsystem>,</navsystem>	SiRF StarV-based GNSS modules.
<cgee>,</cgee>	
<sgee></sgee>	Parameters:
	<navsystem> - Constellation for which the SiRFInstantFix<sup>™</sup> feature has to be enabled</navsystem>
	0 - GPS
	1 – GLONASS
	<cgee> - Client Generated Extended Ephemeris (CGEE) 0 – Disable</cgee>
	1 – Enable
	<sgee> - Server Generated Extended Ephemeris (SGEE)</sgee>
	0 – Disable
	1 – Enable
	Note: SE868-V2 firmware comes with CGEE and SGEE enabled by default for both GPS and GLONASS constellations.
	Note: if <b><sgee>=1</sgee></b> the following URC is used to warn, according to the <b><navsystem></navsystem></b> value, that the SGEE file has to be updated:
	- For GPS
	\$SIFIXEV: GPS SGEE File Update Requested
	- For GLONASS
	\$SIFIXEV: GLONASS SGEE File Update Requested
AT\$GNSSIFIX?	Read command reports the current SiRFInstantFix <sup>™</sup> configuration, for both GPS and GLONASS, in the format:
	\$GNSSIFIX: 0, <cgee>,<sgee></sgee></cgee>
AT\$GNSSIFIX=?	\$GNSSIFIX: 1, <cgee>,<sgee>           Test command reports the supported range of values for parameters</sgee></cgee>
AI JUNSSIFIA-:	<pre>rest command reports the supported range of values for parameters <navsystem>, <cgee>, <sgee></sgee></cgee></navsystem></pre>
Example	AT\$GNSSIFIX=0,1,0
LAMPIC	OK

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 625 of 717

80000ST10025a Rev. 24 - 2016-09-07

	AT\$GNSSIFIX=1,1,1 OK
Note	The Command is available in "Controlled Mode" only

### 3.5.7.18.5.3. Get SGEE File for SiRFInstantFix<sup>TM</sup> - \$FTPGETIFIX

<mark>\$FTPGETIFIX – Get SGEE F</mark>	ile for SiRFInstantFix <sup>TM</sup> SELINT 2
AT\$FTPGETIFIX=	Execution command, issued during an FTP connection, opens a data
<filename>,</filename>	connection, downloads a SGEE file from the FTP server and injects it into
<filesize></filesize>	SiRF StarIV or StarV GNSS receiver.
[, <navsystem>]</navsystem>	
	Parameters:
	<filename> - file name, string type</filename>
	<filesize> - SGEE file size in bytes</filesize>
	<navsystem> - Constellation for which the SGEE file has to be</navsystem>
	downloaded and injected
	0 - GPS (default)
	1 – GLONASS
	Note: whenever an FTP connection has not been opened yet, an <b>ERROR</b>
	result code is returned
	Note: whenever an error happens during the SGEE file injection stage, an <b>ERROR</b> result code is returned
	In this case the possible <i><err></err></i> values reported by <i>+CME ERROR</i>
	(numeric format followed by verbose format) may be:
	920 SGEE update initialization stage failed
	921 SGEE file is not newer than the last stored one
	922 SGEE update generic error
	923 SGEE file open error
	Note: The command closure should always be handled by the customer application. In order to avoid download stall situations a timeout should be
	implemented by the application.
	Note: the <b><navsystem></navsystem></b> parameter has a meaning for Sirf StarV-based receivers (e.g. SE868-V2) only; if omitted, the default value will be used
	(GPS).
	Therefore, when a Sirf StarIV-based receiver is used, the <b><navsystem></navsystem></b>
	parameter is accepted but it does not have any effect.
AT\$FTPGETIFIX=?	Test command returns the <b>OK</b> result code
Example	AT\$FTPGETIFIX="packedDifference.f2p3enc.ee",30970
	OK

80000ST10025a Rev. 24 - 2016-09-07

	AT\$FTPGETIFIX="packedDifference.f2p1enc.ee",10742 +CME ERROR: SGEE file is not newer than the last stored one
Note	The Command is available in "Controlled Mode" only

### 3.5.7.18.5.4. Get SGEE File for SiRFInstantFix<sup>™</sup> - \$HTTPGETIFIX

<mark>\$HTTPGETIFIX – Get SGEE</mark>	File for SiRFInstantFix <sup>TM</sup> SELINT 2	
AT\$HTTPGETIFIX= < prof_id >,	Execution command, issued during an HTTP connection, downloads a SGEE file from the HTTP server and injects it into the SiRF StarIV or	
<filesize></filesize>	StarV GNSS receiver, after a HTTP query using a specific Profile Id, GET	
[, <navsystem>]</navsystem>	option, SGEE file name has been sent.	
	Parameters: <prof_id> - Numeric parameter indicating the profile identifier. Range: 0-2 <filesize> - SGEE file size in bytes <navsystem> - Constellation for which the SGEE file has to be downloaded and injected 0 - GPS (default) 1 - GLONASS</navsystem></filesize></prof_id>	
	Note: whenever an HTTP configuration has not been done yet, an <b>ERROR</b> result code is returned	
	Note: whenever an error happens during the SGEE file injection stage, an <b>ERROR</b> result code is returned In this case the possible <i><err></err></i> values reported by <i>+CME ERROR</i> (numeric format followed by verbose format) may be:	
	<ul> <li>920 SGEE update initialization stage failed</li> <li>921 SGEE file is not newer than the last stored one</li> <li>922 SGEE update generic error</li> <li>923 SGEE file open error</li> </ul>	
	Note: the <b><navsystem></navsystem></b> parameter has a meaning for Sirf StarV-based receivers (e.g. SE868-V2) only; if omitted, the default value will be used (GPS). Therefore, when a Sirf StarIV-based receiver is used, the <b><navsystem></navsystem></b>	
	parameter is accepted but it does not have any effect.	
AT\$HTTPGETIFIX=?	Test command returns the <b>OK</b> result code	
Example	AT\$HTTPGETIFIX=0,30970 OK	
	AT\$HTTPGETIFIX=0,10742 +CME ERROR: SGEE file is not newer than the last stored one	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 627 of 717

Note

The Command is available in "Controlled Mode" only

#### 3.5.7.18.6. GNSS Patch Management

## 3.5.7.18.6.1. Write Patch on flash - \$WPATCH

<b>SWPATCH – Write Patcl</b>	1 on flash	SELINT 2
AT\$WPATCH= <patch_file_name>,<size &gt;</size </patch_file_name>	Execution command allows storing a SiRF software patch on flash memory.	to the module's
	The file should be sent using RAW ASCII file transfer. It is important to set properly the port settings. In particular: Flow control: hardware. Baud rate: 115200 bps	
	Parameters: <patch_file_name> - name of the file in NVM, string type (r sensitive). <size> - file size in bytes</size></patch_file_name>	nax 16 chars, case
	The device shall prompt a three character sequence <greater_than><greater_than><greater_than> (IRA 62, 62, 62) then the command line is terminated with a <cr>; after that a from TE, sized <size> bytes.</size></cr></greater_than></greater_than></greater_than>	a file can be sent
	The operations completes when all the bytes are received.	
	If writing ends successfully, the response is OK; otherwise an reported.	error code is
	Note: This command can be used with SIRF ROM-based GPS (AT\$GPSD=2,1, AT\$GPSD=2,2, AT\$GPSD=3,1, AT\$GPSD=3,1, AT\$GPSD=5,2).	2
	Note: The patch file must have a ".pd2" or ".pd3" (AT\$GPS)	D=5,2) extension.
AT\$WPATCH=?	Test command returns the <b>OK</b> result code	
Example	AT\$WPATCH = "GSD4E_4.1.2.pd2",5472 >>> here receive the prompt: depending on your edi it's possible that the prompt overrides the above or send the patch, sized 54 bytes OK	
	Patch has been stored.	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 628 of 717

80000ST10025a Rev. 24 - 2016-09-07

3.5.7.18.6.2. Enable Patch - \$EPATCH

SEPATCH – Enable Patch SELINT 2	
AT\$EPATCH= [ <patch_file_name>]</patch_file_name>	Execution command allows enabling the usage of the SiRF software patch saved onto the module's flash memory.
	Parameters: <patch_file_name> - name of the file in NVM, string type (max 16 chars, case sensitive).</patch_file_name>
	The execution command returns OK but the patching is confirmed by the following unsolicited: - " <i>Patch Manager: Patched</i> "
	Other unsolicited messages can be due to errors occurred during the patching procedure or patch storage errors: - "Patch Manager: Error opening Patch File" - "Patch Manager: Error processing Patch File" - "Patch Manager: Error on Start Request" - "Patch Manager: Error on Load Request" - "Patch Manager: Error on Exit Request"
	Note: This command can be used with SIRF ROM-based GNSS modules only (AT\$GPSD=2,1, AT\$GPSD=2,2, AT\$GPSD=3,1, AT\$GPSD=3,2 or AT\$GPSD=5,2).
	Note: The patch file must have a <b>".pd2"</b> or " <b>pd.3</b> " (AT\$GPSD=5,2) extension.
	Note: A previously applied patch can be removed from the GNSS Patch RAM by issuing a Factory Reset or by powering the GNSS module down and removing the VBatt.
	However, if automatic patch application hasn't been disabled, the patch will be automatically reapplied.
	Note: If the <b><patch_file_name></patch_file_name></b> is omitted, the automatic patch application, at the next startup of the cellular module, is disabled.
	However, the current patch remains applied until it will be not removed as explained above.
	Note: The configuration specified through AT\$EPATCH can be saved by means of the <b>AT\$GPSSAV</b> command.
	Note: "AT\$EPATCH" command returns ERROR.
AT\$EPATCH?	Read command display the patch in use in the format:
	\$EPATCH: <patch_file_name></patch_file_name>

## 3.5.7.18.7. GNSS ST-AGPS<sup>TM</sup>

#### 3.5.7.18.7.1. Enable STAGPSTM Usage - \$GPSSTAGPS

<b>\$GPSSTAGPS – Enable STA</b>	AGPS <sup>™</sup> Usage SELINT 2
AT\$GPSSTAGPS= <enable></enable>	Set command enables/disables the STAGPS <sup>™</sup> feature available on ST TESEOII-based GNSS modules. Parameters: <enable>: 0 – Disable 1 – Enable</enable>
	<ul> <li>Note: This command can be used with ST TESEOII-based GNSS modules only (AT\$GPSD=4).</li> <li>Note: Since the current STAGPS<sup>™</sup> configuration is not saved in NVM this command has to be issued at every power-cycle of both the GNSS receiver and the GSM module.</li> </ul>
AT\$GPSSTAGPS?	Read command reports the currently selected STAGPS™ configuration in the format:         \$GPSSTAGPS: <enable></enable>
AT\$GPSSTAGPS=?	Test command reports the supported range of values for parameter <enable></enable>

## 3.5.7.18.7.2. Get ST-AGPS<sup>TM</sup> seed file for ST-AGPS - \$HTTPGETSTSEED

<b>\$HTTPGETSTSEED – Get ST</b>	-AGPS seed file for ST-AGPS <sup>TM</sup> SELINT 2	
AT\$HTTPGETSTSEED=	Execution command, issued during a HTTP connection, downloads a ST-	
<prof_id>,</prof_id>	AGPS seed file from the HTTP server and creates a decoded version of	
<filesize></filesize>	the file itself.	
	The decoded seed file, is stored onto the module's NVM and can be injected later on by means of the AT\$INJECTSTSEED command. The ST-AGPS seed file size must be retrieved, before issuing the AT\$HTTPGETSTSEED command, by sending a HTTP query using a specific Profile Id, GET option and the ST-AGPS seed file name.	
	Parameters: <prof_id> - Numeric parameter indicating the profile identifier. Range: 0-2 <filesize> - ST-AGPS seed file size in bytes</filesize></prof_id>	
	Note: whenever an HTTP configuration has not been done yet, an <b>ERROR</b> result code is returned	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 632 of 717

AT\$HTTPGETSTSEED=?	Test command returns the <b>OK</b> result code
Example	AT\$HTTPGETSTSEED=0,2199
	OK
Note	The Command is available in "Controlled Mode" only

## 3.5.7.18.7.3. Inject decoded ST-AGPS seed file - \$INJECTSTSEED

\$INJECTSTSEED – Inject dec	oded ST-AGPS s	seed file SELINT 2	
AT\$INJECTSTSEED	Execution command injects a decoded ST-AGPS seed, previously downloaded and stored onto the module's NVM, into TESEOII-based GNSS receivers. Note: whenever an error happens during the decoded ST-AGPS seed file		
	injection stage, an ERROR result code is returned		
	In this case the possible <err> values reported by +CME ERROR (numeric format followed by verbose format) may be:</err>		
	970 STAGPS Seed file open error		
	971 STAGPS Seed file exceeds the maximum allowed one		
	972	STAGPS pre-configuration error	
	973	STAGPS seed injection error	
	974 STAGPS re-configuration error		
	Note: a decoded ST-AGPS seed can be injected only if the GNSS receiver		
	has a valid UTC time from a previous fix, i.e. it is in a warm start condition.		
AT\$INJECTSTSEED=?	Test command r	returns the <b>OK</b> result code	
Note	The command is	s available in "Controlled Mode" only	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 633 of 717

#### 3.5.7.18.8. GNSS MTK EPO

#### **3.5.7.18.8.1.** Get EPO file for MT EPO Aiding - \$HTTPGETEPO

<b>\$HTTPGETEPO – Get EPO</b>	file for MT EPO Aiding SELINT 2		
AT\$HTTPGETEPO=	Execution command, issued during a HTTP connection, downloads an		
<prof_id>,</prof_id>	EPO file from the HTTP server and stores it on the cellular module's		
<filesize></filesize>	NVM for future use.		
	The EPO file can be injected later on by means of the AT\$INJECTEPO command.		
	The EPO file size must be retrieved, before issuing the		
	AT\$HTTPGETEPO command, by sending a HTTP query using a specific		
	Profile Id, GET option and the EPO file name.		
	Parameters: <prof_id> - Numeric parameter indicating the profile identifier. Range: 0-2 <filesize> - EPO file size in bytes Note: whenever a HTTP configuration has not been done yet, an ERROR result code is returned</filesize></prof_id>		
AT\$HTTPGETEPO=?	Test command returns the <b>OK</b> result code		
Example	AT\$HTTPGETEPO=0,129024		
	OK		
Note	This command is available in "controlled mode" only, for MediaTek		
	MT3333-based GNSS modules (e.g. SL871), i.e. whenever is		
	AT\$GPSD=6.		

## 3.5.7.18.8.2. Inject EPO Aiding file - \$INJECTEPO

<b>\$INJECTEPO – Inject EPO Aiding file</b>		SELINT 2		
<b>AT\$INJECTEPO</b>	stored onto the cellul	Execution command injects an EPO file, previously downloaded and stored onto the cellular module's NVM, into MT3333-based GNSS receivers (e.g. SL871).		
	ERROR result code i In this case the possil	Note: whenever an error happens during the EPO file injection stage, an ERROR result code is returned In this case the possible <err> values reported by +CME ERROR (numeric format followed by verbose format) may be:</err>		
	985 In 986 E	NSS file open error valid EPO file PO MTK binary configuration error PO injection error		

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 634 of 717

	988 EPO NMEA configuration error
	Note: only EPO files up to 14-days validity are currently supported. Therefore, if a 30-days EPO file is used, only data for the first 14 days will be injected.
AT\$INJECTEPO=?	Test command returns the <b>OK</b> result code
Note	This command is available in "controlled mode" only, for MediaTek MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT\$GPSD=6.

#### Query EPO Data Status - \$QUERYEPO 3.5.7.18.8.3.

<b>\$QUERYEPO – Query E</b>	PO Data Status SELINT 2	
AT\$QUERYEPO	Execution command queries the EPO data status, in MT3333-base receivers (e.g. SL871), whose answer will be in the form: <b>\$QUERYEPO:</b> < <b>SET&gt;</b> ,< <b>FWN&gt;</b> ,< <b>FTOW&gt;</b> ,< <b>LWN&gt;</b> ,< <b>LTOW&gt;</b> , < <b>FCWN&gt;</b> ,< <b>FCTOW&gt;</b> ,< <b>LCWN&gt;</b> ,< <b>LTOW&gt;</b> , <pre></pre>	d GNSS iver. to the GNSS o the GNSS ly used. d. y used.
AT\$QUERYEPO=?	Test command returns the <b>OK</b> result code	
Example	AT\$QUERYEPO \$QUERYEPO: 56,1832,259200,1834,237600,1832,367200,1832,367200 OK	)
Note	This command is available in "controlled mode" only, for MediaT MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT\$GPSD=6.	ek

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

page 635 of 717

80000ST10025a Rev. 24 - 2016-09-07

# 3.5.7.18.8.4. Delet EPO Data - \$CLEAREPO

SCLEAREPO – Delete EPO Da	ta SELINT 2
AT\$CLEAREPO	Execution command deletes all the EPO data from MT3333-based GNSS receivers (e.g. SL871).
AT\$CLEAREPO=?	Test command returns the <b>OK</b> result code
Note	This command is available in "controlled mode" only, for MediaTek MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT\$GPSD=6.

#### **3.5.7.18.8.5. Enable EASY - \$EASY**

<b>\$EASY – Enable EASY</b>	SELINT 2
AT\$EASY= <enable></enable>	Set command allows enabling or disabling the EASY feature on MT3333- based GNSS receivers (e.g. SL871). Parameters:
	<enable> - Enable/Disable the EASY feature 0 - Disable 1 - Enable</enable>
AT\$EASY?	Read command reports the current EASY status in the format:
	\$EASY: <enable>,<extension_day></extension_day></enable>
	Where:
	<extension_day> - Number of days for which the prediction has been already done 0 – EASY enabled and prediction not finished yet or not available 13 – EASY enabled and prediction finished for 1, 2 and 3 days respectively</extension_day>
AT\$EASY=?	Test command reports the range of supported values for parameter <b><enable></enable></b>
Note	This command is available in "controlled mode" only, for MediaTek MT3333-based GNSS modules (e.g. SL871), i.e. whenever is AT\$GPSD=6.
	The EASY feature is supported starting from SL871 firmware version AXN_3.60_3333_14080800,C012,MT33-1.,1.106
	The default EASY configuration depends on the specific SL871 firmware version used.

80000ST10025a Rev. 24 - 2016-09-07

### 3.5.7.18.8.6. GNSS 5Hz Navigation Mode - \$GNSS5HZ

<mark>\$GNSS5HZ – GNSS</mark>	5Hz Navigation Mode SELINT 2		
AT\$GNSS5HZ= <mode></mode>	Set command allows enabling the 5Hz Navigation Mode on a SiRFStar V Flash- based GNSS receiver (e.g. SE868-V3).		
	Parameter: <mode></mode>		
	0 – Disable 5Hz Navigation Mode (default) 1 – Enable 5Hz Navigation Mode		
AT\$GNSS5HZ?	Read command reports the current value of the <b><mode></mode></b> parameter, in the format:		
	\$GNSS5HZ: <mode></mode>		
AT\$GNSS5HZ=?	Test command reports the range of supported values for parameter <b><mode></mode></b>		
Note	The command is available in "Controlled Mode" only		

#### 3.5.7.18.8.7. GNSS Estimated Position Errors - \$GNSSEPE

<b>\$GNSSEPE – GNSS Estimated</b>	Position Errors SELINT 2
AT\$GNSSEPE?	Read command reports the Estimated Horizontal and Vertical Position Errors for the last GNSS position fix, for SiRF StarIV and SiRF StarV based GNSS receivers, in the format:
	\$GNSSEPE: <ehpe>,<evpe></evpe></ehpe>
	Where:
	<ehpe> - Estimated Horizontal Position Error in meters</ehpe>
	<evpe> - Estimated Vertical Position Error in meters</evpe>
AT\$GNSSEPE=?	Test command returns the <b>OK</b> result code
Note	The command is available in "Controlled Mode" only
	If a GNSS position fix has not been got yet, the answer will be as follows:
	AT\$GNSSEPE?
	\$GNSSEPE: 0.00,0.00
	ОК

#### **3.5.7.19.** SAP AT Commands Set

#### 3.5.7.19.1. Remote SIM Enable - #RSEN

<b>#RSEN – Remote SIM</b>	Enable	SELINT 2
AT#RSEN= <mode></mode>	Set command is used to enable/disable the Remote SIM feature.	The command
[, <sapformat></sapformat>	returns <b>ERROR</b> if requested on a non multiplexed interface	
[, <role></role>

80000ST10025a Rev. 24 - 2016-09-07

<mark>#RSEN – Remote</mark>	SIM Enable	SELINT 2
	0 - disconnected 1 - connected	
AT#RSEN?	Read command returns the SAP connection status in the forma #RSEN: <conn> where <conn> - connection status, as before</conn></conn>	ıt:
AT#RSEN=?	Test command reports the range of values for all the parameter	rs.

#### 3.5.7.20. Telefonica OpenGate M2M AT Commands Set

For more detailed information about the AT commands dedicated for Telefonica Open Gate M2M protocol handling please consult the OpenGate M2M Protocol User Guide.

#### 3.5.7.21. Audio Commands

These are not the only audio commands available. See par. 3.5.4.4.

#### 3.5.7.21.1. Audio Basic configuration

#### 3.5.7.21.1.1. Change Audio Path - #CAP

<b>#CAP - Change Audio</b>	Path	SELINT 0 / 1
<mark>#CAP - Change Audio</mark> AT#CAP[=[ <n>]]</n>	<ul> <li>Set command switches the active audio path depending on paran</li> <li>Parameter:</li> <li><n> - audio path</n></li> <li>0 - audio path follows the AXE input (factory default):</li> <li>if AXE is low, handsfree is enabled;</li> <li>if AXE is high, internal path is enabled</li> <li>1 - enables handsfree external mic/ear audio path</li> </ul>	
	<ul> <li>2 - enables internal mic/ear audio path</li> <li>Note: The audio path are mutually exclusive, enabling one disab</li> <li>Note: when changing the audio path, the volume level is set at the value for that audio path (see +CLVL).</li> <li>Note: issuing AT#CAP<cr> is the same as issuing the Read connote: issuing AT#CAP=<cr> is the same as issuing the same as</cr></cr></li></ul>	he previously stored

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 639 of 717

80000ST10025a Rev. 24 - 2016-09-07

#CAP - Change Audio Path SELIN		SELINT 0/1
	AT#CAP=0 <cr>.</cr>	
AT#CAP?	Read command reports the active audio path in the format:	
	#CAP: <n>.</n>	
AT#CAP=?	Test command reports the supported values for the parameter <b><n></n></b> .	

<mark>#CAP – Change Audio Path</mark>	SELINT 2
AT#CAP[=[ <n>]]</n>	Set command switches the active audio path depending on parameter <b><n></n></b>
	Parameter:
	< <b>n</b> > - audio path
	0 - audio path follows the <b>AXE</b> input (factory default):
	• if <b>AXE</b> is low, handsfree is enabled;
	<ul> <li>if AXE is high, internal path is enabled</li> <li>1 - enables handsfree external mic/ear audio path</li> </ul>
	2 - enables internal mic/ear audio path
	Note: The audio path are mutually exclusive, enabling one disables the other.
	Note: when changing the audio path, the volume level is set at the previously stored value for that audio path (see $+CLVL$ ).
	Note: #CAP=1 is not available for GE865-QUAD despite it is accepted, because GE865-QUAD has only one audio path.
	Note: #CAP=2 on the modules GL865-DUAL V3, GL865-QUAD V3, GL868-DUAL V3, GE866-QUAD and GE910-QUAD V3 disables the
	Class-D audio output and switches to Class-AB audio output.
AT#CAP?	Read command reports the active audio path in the format:
	#CAP: <n>.</n>
AT#CAP=?	Test command reports the supported values for the parameter <b><n></n></b> .

#### 3.5.7.21.1.2. AXE Pin Reading - #AXE

#AXE - AXE Pin Reading SELINT 2	
AT#AXE	Execution command causes the ME to return the current state of <b>AXE</b> pin in the format: # <b>AXE:</b> <state></state>
	where: <state> 0 - Low</state>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

page 640 of 717

80000ST10025a Rev. 24 - 2016-09-07

#AXE - AXE Pin Reading SELINT		SELINT 2
	1 - High	
AT#AXE=?	Test command returns the <b>OK</b> result code.	

#### 3.5.7.21.1.3. Select Ringer Sound - #SRS

<b>#SRS - Select Rin</b>	ger Sound	SELINT 0/1
AT#SRS[=	Set command sets the ringer sound.	
<n>,<tout>]</tout></n>		
	Parameters:	
	< <b>n</b> > - ringing tone	
	0 - current ringing tone	
	1 <i>max</i> - ringing tone number, where <i>max</i> can be a command <b>AT#SRS=</b> ?.	read by issuing the Test
	<tout> - ringing tone playing time-out in seconds.</tout>	
	0 - ringer is stopped (if present) and current ringer sound	
	160 - ringer sound playing for <b><tout></tout></b> seconds and, if <b>&lt;</b> is set as default ringer sound.	<b>n&gt;&gt;0,</b> ringer sound <b><n></n></b>
	Note: when the command is issued with $>0$ and $ tone is played for  seconds and stored as default rin$	
	Note: if command is issued with < <b>n</b> > > <b>0</b> and < <b>tout</b> > = <b>0</b> , is stopped (if present) and < <b>n</b> > ringing tone is set as curre	
	Note: if command is issued with $\langle n \rangle = 0$ and $\langle tout \rangle > 0$ tone is played.	then the current ringing
	Note: if both <b><n></n></b> and <b><tout></tout></b> are <b>0</b> then the default ringin and ringing is stopped.	g tone is set as current
	Note: If all parameters are omitted then the behaviour of as Read command	Set command is the same
AT#SRS?	Read command reports current selected ringing and its sta	tus in the form:
	#SRS: <n>,<status></status></n>	
	where:	
	< <b>n</b> > - ringing tone number	
	1 <i>max</i>	
	< <b>status</b> > - ringing status	
	0 - selected but not playing	
	1 - currently playing	
AT#SRS=?	Test command reports the supported values for the parameter	eters <n> and <tout></tout></n>

**#SRS - Select Ringer Sound** 

<mark>SELINT 2</mark>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 641 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#SRS - Select Ring</b>	ger Sound SELINT 2	
AT#SRS=	Set command sets the ringer sound.	
[ <n>,<tout>]</tout></n>		
	Parameters:	
	< <b>n</b> > - ringing tone	
	0 - current ringing tone	
	1 <i>max</i> - ringing tone number, where <i>max</i> can be read by issuing the Test command <b>AT#SRS=?</b> .	
	<tout> - ringing tone playing timer in units of seconds.</tout>	
	0 - ringer is stopped (if present) and current ringer sound is set.	
	160 - ringer sound playing for <b><tout></tout></b> seconds and, if <b><n>&gt;0</n></b> , ringer sound <b><n></n></b> is set as default ringer sound.	>
	Note: when the command is issued with $\langle n \rangle > 0$ and $\langle tout \rangle > 0$ , the $\langle n \rangle$ ringing tone is played for $\langle tout \rangle$ seconds and stored as default ringing tone.	
	Note: if command is issued with $\langle n \rangle > 0$ and $\langle tout \rangle = 0$ , the playing of the ringin is stopped (if present) and $\langle n \rangle$ ringing tone is set as current.	ıg
	Note: if command is issued with $\langle n \rangle = 0$ and $\langle tout \rangle > 0$ then the current ringing tone is played for $\langle tout \rangle$ seconds.	
	Note: if both <b><n></n></b> and <b><tout></tout></b> are <b>0</b> then the default ringing tone is set as current and ringing is stopped.	
	Note: If all parameters are omitted then the behaviour of Set command is the same as Read command	;
AT#SRS?	Read command reports current selected ringing and its status in the form:	
	#SRS: <n>,<status></status></n>	
	where:	
	< <b>n</b> > - ringing tone number	
	1 <i>max</i>	
	<status> - ringing status</status>	
	0 - selected but not playing	
	1 - currently playing	
AT#SRS=?	Test command reports the supported values for the parameters <b><n></n></b> and <b><tout></tout></b>	

## 3.5.7.21.1.4. Select Ringer Path - #SRP

#### Handsfree Microphone Gain - #HFMICG 3.5.7.21.1.5.

<b>#HFMICG - Handsfr</b>	ee Microphone Gain SELINT 0 / 1
AT#HFMICG[=	Set command sets the handsfree microphone input gain
[ <level>]]</level>	
	Parameter:
	<li>level&gt;: handsfree microphone input gain</li>
	07 - handsfree microphone gain (+6dB/step, factory default = 4)
	Note: issuing <b>AT#HFMICG<cr></cr></b> is the same as issuing the Read command.
	Note: issuing <b>AT#HFMICG=<cr></cr></b> returns the <b>OK</b> result code.
AT#HFMICG?	Read command returns the current handsfree microphone input gain, in the format:
	#HFMICG: <level></level>
AT#HFMICG=?	Test command returns the supported range of values of parameter <b><level></level></b> .

<b>#HFMICG - Handsfre</b>	e Microphone Gain Sl	<mark>ELINT 2</mark>	
AT#HFMICG=	Set command sets the handsfree microphone input gain		
[ <level>]</level>			
	Parameter:		
	<li>level&gt;: handsfree microphone input gain</li>		
	07 - handsfree microphone gain (+6dB/step, factory default = 4)		
AT#HFMICG?	Read command returns the current handsfree microphone input gain, in the format:		
	#HFMICG: <level></level>		
AT#HFMICG=?	Test command returns the supported range of values of parameter <	<level>.</level>	

#### 3.5.7.21.1.6. Analog Microphone Gain - #ANAMICG

<b>#ANAMICG – Analog Microph</b>	ione Gain SELINT 2	
AT#ANAMICG= <gain_level></gain_level>	This command allows setting the microphone analog gain through 15	
	levels by 3 dB steps	
	Parameters: <gain_level>: analog microphone gain</gain_level>	
	014 - analog microphone input gain (+3dB/step, factory default = 8)	
AT#ANAMICG? Read command returns the current analog microphone		
	in the	
	format:	
	#ANAMICG: <gain_level></gain_level>	

80000ST10025a Rev. 24 – 2016-09-07

AT#ANAMICG =?	Test command reports the supported range of values for parameters
	<gain_level>.</gain_level>

## 3.5.7.21.1.7. Digital Microphone Gain - #DIGMICG

<b>#DIGMICG – Digital Microphone G</b>	ain SELINT 2
AT#DIGMICG= <gain_level></gain_level>	This command allows setting the microphone digital gain through 45 levels by 1 dB steps Parameters: <gain_level>: digital microphone input gain 145 - digital microphone input gain (+1dB/step, factory default = 33) <gain_level>: = 0 Microphone is mute NOTE: This command substitutes the #HSMICG command and has the same default value. NOTE: AT#DIGMICG=45 introduces a gain of +12 dB AT#DIGMICG=33 introduces a gain of 0 dB AT#DIGMICG=0 Microphone is mute</gain_level></gain_level>
AT#DIGMICG?	Read command returns the current digital microphone gain level, in the format: #DIGMICG: <gain_level></gain_level>
AT#DIGMICG =?	Test command reports the supported range of values for parameters <gain_level>.</gain_level>

#### 3.5.7.21.1.8. Handset Microphone Gain - #HSMICG

<b>#HSMICG - Handset</b> I	Microphone Gain	<mark>SELINT 0 / 1</mark>
AT#HSMICG[=	Set command sets the handset microphone input gain	
[ <level>]]</level>		
	Parameter:	
	<li>level&gt;: handset microphone input gain</li>	
	07 - handset microphone gain (+6dB/step, factory default = 0)	
	Note: issuing <b>AT#HSMICG<cr></cr></b> is the same as issuing the Re	ad command.
	Note: issuing AT#HSMICG= <cr> returns the OK result code.</cr>	
AT#HSMICG?	Read command returns the current handset microphone input gai	n, in the format:
	#HSMICG: <level></level>	
AT#HSMICG=?	Test command returns the supported range of values of parameter	er <b><level></level></b> .

80000ST10025a Rev. 24 - 2016-09-07

#HSMICG - Handset Microphone Gain SELIN		SELINT 2
AT#HSMICG=	Set command sets the handset microphone input gain	
[ <level>]</level>		
	Parameter:	
	<li>level&gt;: handset microphone input gain</li>	
	07 - handset microphone gain (+6dB/step, factory defaul	t = 0)
AT#HSMICG?	Read command returns the current handset microphone inp	ut gain, in the format:
	#HSMICG: <level></level>	
AT#HSMICG=?	Test command returns the supported range of values of part	ameter <b><level></level></b> .

### 3.5.7.21.1.9. Handsfree Receiver Gain - #HFRECG

<b>#HFRECG - Handsfr</b>	ee Receiver Gain SE	ELINT 2	
AT#HFRECG=	Set command sets the handsfree analogue output gain		
<level></level>			
	Parameter:		
	<li>level&gt;: handsfree analogue output gain</li>		
	06 - handsfree analogue output (-3dB/step, factory default = 0)		
	Note: This parameter is saved in NVM issuing AT&W command.		
AT#HFRECG?	Read command returns the current handsfree analog output gain, in the format:		
	#HFRECG: <level></level>		
AT#HFRECG =?	Test command returns the supported range of values of parameter <	level>.	

#### 3.5.7.21.1.10. Handset Receiver Gain - #HSRECG

<b>#HSRECG - Handset</b>	Receiver Gain	<mark>SELINT 2</mark>
AT#HSRECG=	Set command sets the handset analogue output gain	
<level></level>		
	Parameter:	
	<li>level&gt;: handset analogue output gain</li>	
	06 - handset analogue output (-3dB/step, default value = 0)	
	Note: This parameter is saved in NVM issuing AT&W command.	
AT#HSRECG?	Read command returns the current handset analog output gain, ir	the format:
	#HSRECG: <level></level>	
AT#HSRECG =?	Test command returns the supported range of values of paramete	r <b><level></level></b> .

#### 3.5.7.21.1.11. Set Headset Sidetone - #SHFSD

80000ST10025a Rev. 24 - 2016-09-07

<mark>#SHFSD - Set Head</mark>	set Sidetone SELINT 0 / 1
AT#SHFSD[=	Set command enables/disables the sidetone on headset audio output.
[ <mode>]]</mode>	
	Parameter:
	<mode></mode>
	0 - disables the headset sidetone (factory default)
	1 - enables the headset sidetone.
	Note: This setting returns to default after power off.
	Note: issuing <b>AT#SHFSD<cr></cr></b> is the same as issuing the Read command.
	Note: issuing <b>AT#SHFSD=<cr></cr></b> is the same as issuing the command <b>AT#SHFSD=0<cr></cr></b> .
AT#SHFSD?	Read command reports whether the headset sidetone is currently enabled or not, in
	the format:
	#SHFSD: <mode></mode>
AT#SHFSD=?	Test command returns the supported range of values of parameter <b><mode></mode></b> .

<mark>#SHFSD - Set Hea</mark>	dset Sidetone SELINT 2	
AT#SHFSD=	Set command enables/disables the sidetone on headset audio output.	
[ <mode>]</mode>		
	Parameter:	
	<mode></mode>	
	0 - disables the headset sidetone (factory default)	
	1 - enables the headset sidetone.	
	Note: This setting returns to default after power off.	
AT#SHFSD?	Read command reports whether the headset sidetone is currently enabled or not, in the format:	
	#SHFSD: <mode></mode>	
AT#SHFSD=?	Test command returns the supported range of values of parameter <b><mode></mode></b> .	

#### 3.5.7.21.1.12. Set Handset Sidetone - #SHSSD

#SHSSD - Set Han	dset Sidetone	SELINT 2
AT#SHSSD= <mode></mode>	Set command enables/disables the sidetone on handset audio o	utput.
	Parameter: <b>mode&gt;</b> 0 - disables the handset sidetone 1 - enables the handset sidetone (factory default)	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 647 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#SHSSD - Set Handse</b>	t Sidetone	SELINT 2
	Note: This parameter is saved in NVM issuing AT&W command.	
AT#SHSSD?	Read command reports whether the headset sidetone is currently enabled or not, in	
	the format:	
	#SHSSD: <mode></mode>	
AT#SHSSD=?	Test command returns the supported range of values of parameter	r <b><mode></mode></b> .

#### 3.5.7.21.1.13. Activation and gain setting of side tone - #SIDETG

<b>#SIDETG – Activation and gair</b>	setting of side tone SELINT 2
AT#SIDETG= <mode>[,<gain_ level&gt;]</gain_ </mode>	Setting of side tone       Setting of side tone         This command enables/disables the sidetone and set the sidetone's digital gain through 46 levels by 1 dB steps.         Parameters: <mode>         0 - disables sidetone         1 - enables sidetone         <gain_level>: digital sidetone gain         045 - digital sidetone gain (+1dB/step, factory default=29)         NOTE:         Setting <mode> to 0, the <gain_level> parameter is not accepted.         The <mode> default value changes respect to the product in use; changing audio path thanks to AT#CAP could change default value. Default value is strictly related to AT#SHFSD and AT#SHSSD commands, depending on which audio path is set.</mode></gain_level></mode></gain_level></mode>
AT#SIDETG?	Read command reports the value of <b><mode></mode></b> and <b><gain_level></gain_level></b> parameters in the format: #SIDETG: <b><mode></mode></b> , <b><gain_level></gain_level></b>
AT#SIDETG=?	Test command reports the supported range of values for <b><mode></mode></b> and <b><gain_level></gain_level></b> parameters.

## 3.5.7.21.1.14. Speaker Mute Control - #SPKMUT

<b>#SPKMUT - Speaker</b>	Mute Control	SELINT 2
AT#SPKMUT= <n></n>	Set command enables/disables the global muting of for every audio output ( ring, incoming sms, voice,	· ·
	Parameter: <n> 0 - mute off, speaker active (factory default) 1 - mute on, speaker muted.</n>

80000ST10025a Rev. 24 - 2016-09-07

<mark>#SPKMUT - Speaker</mark>	Mute Control   SELINT 2
	Note: this command mutes/activates both speaker audio paths, internal speaker and external speaker.
AT#SPKMUT?	Read command reports whether the muting of the speaker audio line during a voice call is enabled or not, in the format:
	#SPKMUT: <n></n>
AT#SPKMUT=?	Test command reports the supported values for <b><n></n></b> parameter.

# 3.5.7.21.1.15. Open Audio Loop - #OAP

<b>#OAP - Open Audio L</b>	oop SELINT 2
AT#OAP=[ <mode>]</mode>	Set command sets Open Audio Path.
	Parameter:
	0 - disables Open Audio Path (default)
	1 - enables Open Audio Path
	Note: the audio Loop will be activated on line select by the AXE pin or <b>#CAP</b> com mand.
AT#OAP?	Read command reports whether the Open Audio Path is currently enabled or not, in the format:
	#OAP: <mode></mode>
AT#OAP=?	Test command returns the supported range of values of parameter <b><mode></mode></b> .
Note	The audio loop will be established between microphone and speaker using sidetone scaling value.

#### 3.5.7.21.1.16. HF Speaker Volume - #HFVOL

#HFVOL – HF Speaker Volume SELINT 2		
AT#HFVOL= <level></level>	This command sets the volume of the Loudspeaker.	
	Parameter: <level> : 18 Each level corresponds to a Loudspeaker gain setting expressed in dB:</level>	
	1 - HF gain = 0 dB	
	2 - HF gain = +3 dB	
	3 - HF gain = +6 dB	
	4 - HF gain = +9 dB (default for 16.0x.xxx SW version)	
	5 - HF gain = +12 dB	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 649 of 717

	6 - HF gain = +15 dB (default for 13.0x.xxx SW version) 7 - HF gain = +18 dB 8 - HF gain = +24 dB
	Note: You can use the command <b>AT#SPKMUT</b> to mute the audio path.
AT#HFVOL?	Read command returns the current settings in the format:
	#HFVOL: <level></level>
AT#HFVOL=?	Test command returns the supported range of parameter in the format:
	<b>#HFVOL</b> : (list of supported <level>s)</level>
Example	AT#HFVOL=?
	# HFVOL: (1-8)
	ОК
	AT#HFVOL=4
	OK

#### **3.5.7.21.1.17.** Setting two frequency modes for buzzer - #BUZZERMODE

<b>#BUZZERMODE – Sets</b>	s two frequency modes for buzzer SELINT 2	
AT#BUZZERMODE=	Set two Buzzer Frequency Modes, slow and fast.	
<mode></mode>		
	Parameters:	
	<mode></mode>	
	0 – fast frequency (factory default for all products except GE864-QUAD and	
	GC864-QUAD)	
	1 – frequency halved (factory default for GE864-QUAD and GC864-QUAD)	
	Note: the value is automatically saved in NVM.	
AT#BUZZERMODE?	Read command reports last setting, in the format:	
	#BUZZEMODE: <mode></mode>	
AT#BUZZERMODE=	Test command reports the range of supported values for parameter:	
?	<mode></mode>

## 3.5.7.21.2. Tones configuration

# 3.5.7.21.2.1. Signaling Tones Mode - #STM

<b>#STM - Signaling</b>	Tones Mode   SELINT 0 / 1
AT#STM [= <mode>]</mode>	Set command enables/disables the signaling tones output on the audio path selected with <b>#SRP</b> command
	Parameter: <mode> - signaling tones status 0 - signaling tones disabled 1 - signaling tones enabled Note: AT#STM=0 has the same effect as AT+CALM=2; AT#STM=1 has the same effect as AT+CALM=0.</mode>
	Note: If parameter is omitted then the behaviour of Set command is the same as Read command
AT#STM?	Read command reports whether the current signaling tones status is enabled or not, in the format: #STM: <mode></mode>
AT#STM=?	Test command reports supported range of values for parameter <b><mode></mode></b> .

<b>#STM - Signaling To</b>	ones Mode SELINT 2	
AT#STM=	Set command enables/disables the signaling tones output on the audio path selec	ted
[ <mode>]</mode>	with <b>#SRP</b> command	
	Parameter:	
	<mode> - signaling tones status</mode>	
	0 - signaling tones disabled	
	1 - signaling tones enabled	
	2 - all tones disabled	
	Note:	
	AT#STM=0 has the same effect as AT+CALM=2;	
	AT#STM=1 has the same effect as AT+CALM=0.	
AT#STM?	Read command reports whether the current signaling tones status is enabled or n	ot,
	in the format:	
	#STM: <mode></mode>	ľ
AT#STM=?	Test command reports supported range of values for parameter <b><mode></mode></b> .

3.5.7.21.2.2. Tone Playback - #TONE

<b>#TONE - Tone Playba</b>	ack SELINT 2
AT#TONE= <tone> [,<duration>]</duration></tone>	Execution command allows the reproduction of DTMF tones, standard free tone, standard busy tone and a set of user defined tones for a certain time. Parameters: <tone> - ASCII characters, range is ((0-9),#,*,(A-D),(G-L),Y,Z); - (0-9), #,*,(A-D): DTMF tone - (G-L): User Defined Tones - Y: free tone - Z: busy tone <duration> - Duration of current tone in 1/10 of Sec. 1300 - tenth of seconds (default is 30)</duration></tone>
AT#TONE=?	Test command returns the supported range of values for parameters <b><tone></tone></b> and <b><duration></duration></b> .
Note:	See AT#UDTSET command to set user defined tones

## 3.5.7.21.2.3. Extended tone generation - #TONEEXT

<b>#TONEEXT – Extend</b>	ed tone generation SELINT 2
AT# TONEEXT= <toneid>,<act></act></toneid>	Execution command allows the reproduction of DTMF tones, standard free tone, standard busy tone and a set of user defined tones for a infinite time, or stop the running tone Parameters: < toneId > - ASCII characters in the set (0-9), #,*,(A-D),(G-L),Y,Z ; - (0-9), #,*,(A-D) : DTMF tone - (G-L) : User Defined Tones <sup>41</sup> . - y : free tone - z: busy tone < act > - Action to be performed. - 0: Stop the <toneid> if running. - 1: Start the <toneid>.</toneid></toneid>
AT#TONEEXT=?	Test command returns the range of supported values for parameter <b><toneid>,<act>.</act></toneid></b>

<sup>41</sup> See also AT#UDTSET, AT#UDTRST and AT#UDTSAV command description following in this document.

3.5.7.21.2.4. Tone Classes Volume - #TSVOL

<b>#TSVOL – Tone C</b>	lasses Volume	SELINT 2
AT#TSVOL=	Set command is used to select the volume mode for one or t	more tone classes.
<class>,</class>		
<mode></mode>	Parameters:	
	ode> Parameters:	
	0 <i>max</i> - the value of <i>max</i> can be read issuing the Test com Note: The class DTMF Tones ( <b><class></class></b> =16) refers only to th generated DTMF tones. It doesn't affect the leve generated by the network as result of AT+VTS	he volume for locally el of the DTMF
AT#TSVOL?	Read command returns for each class of tones the last settin <mode> is not 0, of <volume> too, in the format: #TSVOL: 1,<mode1>[,<volume1>]<cr><lf>  #TSVOL:128,<mode128>[,<volume128>]</volume128></mode128></lf></cr></volume1></mode1></volume></mode>	ng of <b><mode></mode></b> and, if
AT#TSVOL=?	Test command returns the supported range of values of para <b><mode></mode></b> and <b><volume></volume></b> .	ameters <b><class></class></b> ,
Example	AT#TSVOL=64,1,5 OK AT#TSVOL? #TSVOL:1,0 #TSVOL:2,0 #TSVOL:4,1,5 #TSVOL:4,1,5 #TSVOL:8,0 #TSVOL:16,1,5

<b>#UDTSET – User De</b>	fined Tone SET SELINT 2	
AT#UDTSET=	Set command sets frequency and amplitude composition for a User Defined Tone.	
<tone></tone>	Parameters:	
, <f1>,<a1></a1></f1>	<tone> - tone index (G,H,I,J,K,L)</tone>	
[, <f2>,<a2></a2></f2>	<fi>- frequency in Hz; range is (300,3000) in step of 1 Hz</fi>	
[, <f3>,<a3>]]</a3></f3>	<ai> - amplitude in dB; range is (10,100) in step of 1 dB</ai>	
	Note: $Ai = 100$ is equal to the max value of the single tone. Lower values attenuate output to the difference between 100 and the selected amplitude (ex: $Ai = 80$ is equal to $100-80 = -20$ dB).	
	Note: issuing AT&F1 or AT&Z has the effect to set the parameters with the last saved in NVM values	
	Note: $Ai = 0$ and $Fi = 0$ are only values for uninitialized parameters and can't be issued by AT command. Every time the set command is issued, the unspecified parameters are automatically reset to zero. (Ai,Fi) issuing needs also (Aj,Fj) with j <i.< th=""></i.<>	
AT# UDTSET?	Read command returns the current settings for the tones:	
	#UDTSET: G, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: H, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: I, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: J, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: J, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: K, <f1>,<a1>,<f2>,<a2>,<f3>,<a3> #UDTSET: L, <f1>,<a1>,<f2>,<a2>,<f3>,<a3></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1></a3></f3></a2></f2></a1></f1>	
AT# UDTSET =?	Test command returns the supported range of values for <b><tone></tone></b> , <b><fi></fi></b> and <b><ai></ai></b> parameters.	

#### 3.5.7.21.2.6. User Defined Tone SAVE - #UDTSAV command

#UDTSAV – User Defined Tone SAVe SELINT 2	
AT#UDTSAV	Execution command saves the actual values of frequency and amplitude parameters that have been set with the command <b>#UDTSET</b>
AT#UDTSAV =?	Test command returns the OK result code.
Example	AT#UDTSAV OK Current tones are saved in NVM

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 655 of 717

80000ST10025a Rev. 24 - 2016-09-07

#### 3.5.7.21.2.7. User Defined Tone Reset - #UDTRST command

#UDTRST – User Defined Tone ReSeT SELINT 2		SELINT 2
AT#UDTRST	Execution command resets to the default set the actual v amplitude parameters that can be set with the command	
AT#UDTRST =?	Test command returns the OK result code.	
Example	AT#UDRST OK	
	The default value tones are restored in NVM	

#### 3.5.7.21.3. Audio profiles

#### 3.5.7.21.3.1. Audio Profile Selection - #PSEL

#PSEL - Audio Profile Selection SELINT 2		SELINT 2
AT#PSEL= <prof></prof>	Set command selects the active audio profile	
	Parameter:	
	<prof>: current profile</prof>	
	0 - standard profile	
	13 - extended profile, modificable.	
	Note: This parameter is saved in NVM issuing AT&W command	d.
AT#PSEL?	The read command returns the active profile in the format:	
	#PSEL: <prof></prof>	
AT#PSEL=?	Test command returns the supported range of values of parame	ter <b><prof></prof></b> .

#### **3.5.7.21.3.2.** Audio Profile Configuration Save - **#PSAV**

<b>#PSAV - Audio F</b>	Profile Configuration Save SELINT 2
AT#PSAV	Execution command saves the actual audio parameters in the NVM of the device. It is not allowed if active audio profile is 0.
	The audio parameters to store are:
	<ul> <li>microphone line gain</li> <li>earpiece line gain</li> <li>side tone gain</li> <li>LMS adaptation speed</li> <li>LMS filter length (number of pageficients)</li> </ul>
	<ul> <li>LMS filter length (number of coefficients)</li> <li>speaker to micro signal power relation</li> <li>noise reduction max attenuation</li> <li>noise reduction weighting factor (band 300-500Hz)</li> </ul>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 656 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#PSAV - Audio Profile</b>	Configuration Save	<mark>SELINT 2</mark>
	<ul> <li>noise reduction weighting factor (band 500-4000Hz)</li> <li>AGC Additional attenuation</li> <li>AGC minimal attenuation</li> <li>AGC maximal attenuation</li> <li>Uplink path biquad filters</li> <li>Downlink path biquad filters</li> </ul>	
AT#PSAV=?	Test command returns the <b>OK</b> result code.	
Example	AT#PSAV	
-	OK	
	Current audio profile is saved in NVM	

# 3.5.7.21.3.3. Audio Profile Factory Configuration - #PRST

<b>#PRST - Audio Pro</b>	ile Factory Configuration SELINT 2	
AT#PRST	Execution command resets the actual audio parameters in the NVM of the devic the default set. It is not allowed if active audio profile is 0. The audio parameters to reset are:	e to
	<ul> <li>microphone line gain</li> <li>earpiece line gain</li> <li>side tone gain</li> <li>LMS adaptation speed (step size)</li> <li>LMS filter length (number of coefficients)</li> <li>speaker to micro signal power relation</li> <li>noise reduction max attenuation</li> <li>noise reduction weighting factor (band 300-500Hz)</li> <li>noise reduction weighting factor (band 500-4000Hz)</li> <li>AGC Additional attenuation</li> <li>AGC minimal attenuation</li> </ul>	
	- AGC maximal attenuation	
AT#PRST=?	Test command returns the <b>OK</b> result code.	
Example	OK Current audio profile is reset

#### 3.5.7.21.4. Audio filters

#### 3.5.7.21.4.1. Cascaded filters - #BIQUADIN

BIQUADIN - Uplink Path Biquad Filters SELINT 2		
AT# BIQUADIN=	Set command allows to configure the parameters of the two cascaded	
<a_{f0}></a_{f0}>	digital <b>biquad filters</b> $H_{First}(z) \cdot H_{Second}(z)$ in Uplink path (sending). It is	
[, <a<sub>F1&gt;</a<sub>	not allowed if active audio profile is 0.	
[, <a<sub>F2&gt;</a<sub>	not anowed if active dudio prome is 0.	
[, <b<sub>F1&gt;</b<sub>	Parameters:	
[, <b<sub>F2&gt;</b<sub>		
[, <a<sub>s0&gt;</a<sub>	$\langle \mathbf{a}_{Fn} \rangle, \langle \mathbf{b}_{Fn} \rangle, \langle \mathbf{a}_{Sn} \rangle, \langle \mathbf{b}_{Sn} \rangle$ - they all are specific parameters for the	
$[,$	calculation of digital <b>biquad filters</b> as follows:	
[, <a<sub>s2&gt;</a<sub>	$a + 2 \cdot a \cdot z^{-1} + a \cdot z^{-2}$	
[, <b<sub>S1&gt;</b<sub>	$H_F(z) = \frac{a_{F0} + 2 \cdot a_{F1} \cdot z^{-1} + a_{F2} \cdot z^{-2}}{1 + 2 \cdot b_{F1} \cdot z^{-1} + b_{F2} \cdot z^{-2}}$	
[, <b<sub>S2&gt;</b<sub>	$1 + 2 \cdot b_{F1} \cdot z^{-1} + b_{F2} \cdot z^{-2}$	
11111111	$a_{xx} + 2 \cdot a_{xx} \cdot z^{-1} + a_{xx} \cdot z^{-2}$	
	$H_{s}(z) = \frac{a_{s0} + 2 \cdot a_{s1} \cdot z^{-1} + a_{s2} \cdot z^{-2}}{1 + 2 \cdot b_{s1} \cdot z^{-1} + b_{s2} \cdot z^{-2}}$	
	$1 + 2 \cdot b_{S1} \cdot z + b_{S2} \cdot z$	
	-3276832767 - each value has to be interpreted as signed fixed point	
	number in two's complement format with 15 fractional	
	bits in a 16 bit word (Q15)	
	Note: in the above formulas pay attention to the multiplier (2) for	
	parameters $\langle \mathbf{a}_{F1} \rangle$ , $\langle \mathbf{a}_{S1} \rangle$ , $\langle \mathbf{b}_{F1} \rangle$ and $\langle \mathbf{b}_{S1} \rangle$	
	Parameters can be saved in NVM using AT#PSAV command and are	
	available for audio profiles 1,2,3. For audio profile 0 the values are fixed.	
	available for audio profiles 1,2,5.1 or audio profile o the values are fixed.	
AT# BIQUADIN?	Read command returns the parameters for the active profile in the format:	
AT# BIQUADIN:	Read command returns the parameters for the active prome in the format.	
	#BIQUADIN:	
	$, , , , , , , , , $	
	It is not allowed if active audio profile is 0.	
AT# BIQUADIN=?	Test command returns the supported range of values for parameters $\langle a_{F0} \rangle$ ,	
	$ a_{F1}\rangle, \langle a_{F2}\rangle, \langle b_{F1}\rangle, \langle b_{F2}\rangle, \langle a_{S0}\rangle, \langle a_{S1}\rangle, \langle a_{S2}\rangle, \langle b_{S1}\rangle, \langle b_{S2}\rangle$	
	$a_{F1}$ , $a_{F2}$ , $v_{F1}$ , $v_{F2}$ , $a_{S0}$ , $a_{S1}$ , $a_{S2}$ , $v_{S1}$ , $v_{S2}$	

# 3.5.7.21.4.2. Cascaded filters - #BIQUADOUT

#BIQUADOUT - Downlink Path Biquad Filters SELINT 2		
AT# BIQUADOUT=	Set command allows to configure the parameters of the two case	caded digital
$< a_{F0} >$ [, $< a_{F1} >$ [, $< a_{F2} >$ [, $< b_{F1} >$	<b>biquad filters</b> $H_{First}(z) \cdot H_{Second}(z)$ in Downlink path (receivin	g). It is not allowed
, <a<sub>F1&gt;</a<sub>	if active audio profile is 0.

3.5.7.21.5.2.	Handsfree Configuration - #HFCFG
---------------	----------------------------------

<i>o</i>		
<b>#HFCFG – Handsfree Configu</b>		
AT#HFCFG=	Set command configures AGC threshold for Double Talk detection and	
<agc_rxtx_en>,</agc_rxtx_en>	digital gain in Uplink.	
<agc_rxtx>,<hf_gain></hf_gain></agc_rxtx>		
	Parameters:	
	<agc_rxtx_en></agc_rxtx_en>	
	0 – disables different threshold for AGC	
	1 – enables different threshold for AGC	
	<age rxtx="">:</age>	
	-960960 - parameter that specifies the threshold for AGC	
	< hf gain >:	
	0 - disables + 18 dB of gain in Uplink path	
	1 – enables +18dB of gain in Uplink path	
	Note: the digital gain in Uplink path should be enabled only reducing by the same amount the other analog/digital gains to avoid saturation.	
	Note: It is not allowed if active audio profile is 0; in this case an ERROR is returned.	
AT#HFCFG?	Read command reports the currently selected parameters in the format:	
	#HFCFG: <agc_rxtx_en>,<agc_rxtx>,<hf_gain></hf_gain></agc_rxtx></agc_rxtx_en>	
	Note: if active audio profile is 0, then an ERROR is returned. If active audio profile is different from 0, then the default value for all the parameters is 0.	
AT#HFCFG =?	Test command returns the supported range of values for all the parameters.	

## 3.5.7.21.5.3. TX Noise Injector configuration - #TXCNI

#TXCNI – TX Noise Injector configuration SELINT 2		SELINT 2
AT#TXCNI = <support> ,<gain>,<floor></floor></gain></support>	Set command enables and configures comf	fort noise injector embedded.
	Parameters:	
	<support> 0 - disable TXCNI functionality</support>	
	1 - enable TXCNI functionality	
	<gain></gain>	
	032767 – gain value of noise injected

80000ST10025a Rev. 24 - 2016-09-07

#SHFEC - Handsfree Echo Canceller SELINT 2		SELINT 2
	<ul> <li>0 - disables echo canceller for handsfree mode (factory default)</li> <li>1 - enables echo canceller for handsfree mode</li> <li>Note: This setting returns to default after power off.</li> </ul>	
AT#SHFEC?	Read command reports whether the echo canceller function on audio handsfree output is currently enabled or not, in the format: #SHFEC: <mode></mode>	
AT#SHFEC=?	Test command returns the supported range of values of parameter	er <b><mode></mode></b> .

#### 3.5.7.21.5.5. Handset Echo Canceller - #SHSEC

<b>#SHSEC - Handset</b>	Echo Canceller SELINT 2
AT#SHSEC =	Set command enables/disables the echo canceller function on audio handset output.
<mode></mode>	
	Parameter:
	<mode></mode>
	0 - disables echo canceller for handset mode (default)
	1 - enables echo canceller for handset mode
	Note: This parameter is saved in NVM issuing AT&W command.
AT#SHSEC?	Read command reports whether the echo canceller function on audio
	handset output is currently enabled or not, in the format:
	#SHSEC: <mode></mode>
AT#SHSEC =?	Test command returns the supported range of values of parameter
	<mode>.</mode>

## 3.5.7.21.5.6. Echo Reducer Configuration - #ECHOCFG

#ECHOCFG – Echo Reducer Configuration SELINT 2		
AT#ECHOCFG= <par_1></par_1>	Set command writes values in echo reducer parameters. It is not allowed if	
[, <par_2>[,,<par_n>]]</par_n></par_2>	active audio profile is 0.	
	The module responds to the set command with the prompt '>' and waits for the data to send.	
	Parameters:	
	<par_1></par_1>	
	0 – configure all parameters, module awaits 39 values	
	1,2,,39 – configure single parameters, module awaits 1 value	
	<pre><par_i> with i = {2;N} 1,2,,39 - configure every parameter specified</par_i></pre>	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 664 of 717

After '>' to complete the operation send Ctrl-Z char $(0x1A hex)$ ; to exit without writing the message send ESC char $(0x1B hex)$ .
Data shall be written in Hexadecimal Form with 4 digits for every < <b>par_i</b> > value provided by set command.
If data are successfully sent, then the response is OK. If data sending fails for some reason, an error code is reported.
Parameters can be saved in NVM using AT#PSAV command and are available for audio profiles 1,2,3. For audio profile 0 the values are fixed.
Note: Configuring single parameters, it is allowed to enter a maximum of 32 parameters.
Note: the default configuration is targeted for almost all common acoustic echo scenarios; if further tuning is needed the customer can change by oneself only the following parameters:
<pre><par_14> 032767 - factory default value is 18384 Additional gain: increasing this parameter average echoes are more attenuated</par_14></pre>
<pre><par_15> 016384 - factory default value is 2000 Total gain lower limit: increasing this parameter small echoes are more attenuated</par_15></pre>
<par_16> 016384 - factory default value is 10000 Total gain upper limit: increasing this parameter load echoes are more attenuated</par_16>
<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
<pre><pre><pre><pre><pre><pre><pre>default value is 8000</pre> Overestimation factor 1: decreasing this parameter increases noise</pre></pre></pre></pre></pre></pre>

	#DTMF: <mode></mode>
AT#DTMF =?	Test command reports supported range of values for all parameters.

## 3.5.7.21.6.2. Embedded DTMF decoder configuration - #DTMFCFG

DTMFCFG – Embedded DTM	F decoder configuration SELINT 2
AT#DTMFCFG= <scaling></scaling>	Set command allows configuration of the embedded DTMF decoder.
, <threshold_1>,<threshold_2></threshold_2></threshold_1>	
	Parameters:
	<scaling>:</scaling>
	311 – this is the scaling applied to the pcm samples in order to manage arithmetic operations. The default value is 7.
	<threshold_1>: 100020000 – this is the numeric threshold used to detect DTMF tones. The default value is 2500.</threshold_1>
	<threshold_2>: 100020000 – this is the numeric threshold used to start DTMF decoding. The default value is 1500.</threshold_2>
	Note: The default values were chosen after a fine tuning, so every change should be done very carefully to avoid wrong decoding.
	Note: the values set by command are not saved and a software or hardware reset restores the default value.
	Note: Default values are referred to standard DMTF decoder (AT#DTMF=1)
AT#DTMFCFG?	Read command reports the currently selected <b><scaling>,<threshold></threshold></scaling></b> in the format:
	# DTMFCFG: <scaling>,<threshold_1>,<threshold_2></threshold_2></threshold_1></scaling>
AT#DTMFCFG =?	Test command reports supported range of values for all parameters.

## **3.5.7.21.7. Digital Voice Interface**

#### 3.5.7.21.7.1. Digital Voiceband Interface - #DVI

<b>#DVI - Digital Voiceband Interface</b> SELINT 0/1/2		
AT#DVI= <mode></mode>	Set command enables/disables the Digital Voiceband Interface.

#### 3.5.7.21.8.2. AMR File Format Play - #SAMR

#SAMR - AMR File Format Play SELINT 2		
AT#SAMR= <mode>,</mode>	Execution command allows user to play an AMR audio stream coming from se	rial
<dir></dir>	port to speaker or uplink audio channel.	
	The audio stream shall have an AMR file format without the 6-byte header	
	(0x23,0x21,0x41,0x4D,0x52,0x0A).	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 674 of 717

	An active speech call is needed when sending to audio channel.
	Parameters:
	<mode>: action to be execute;</mode>
	1 - play AMR stream from serial to selected direction <b><dir></dir></b> .
	<dir>: Select the audio path.</dir>
	0 - send/receive to/from audio front end
	1 - send/receive to/from audio channel
	Note: Execution command switches module in online mode. Module moves back to command mode either after entering the escape sequence +++ or as a consequence of a <b>DTR transition</b> .
	Note: The AMR bit rate shall be set using <b>AT#SAMRCFG</b> command.
	Note: While playing, uplink and downlink speech muting can be set using <b>AT#SAMRCFG</b> command.
AT#SAMR=?	Test command returns the supported range of values for parameters <b><mode></mode></b> and <b><dir></dir></b> .
Example	AT#SAMR=1,0 CONNECT
	+++
	NO CARRIER
	Note: after the CONNECT, audio stream in AMR format has to be sent to serial port

#### 3.5.7.21.8.3. SAMR Configuration - #SAMRCFG

#SAMRCFG – SAMR Configuration SELINT 2	
AT#SAMRCFG= <frame_type< th=""><th>Set command configures the parameters related to the AT#SAMR</th></frame_type<>	Set command configures the parameters related to the AT#SAMR
>[, <play_att>[,<rec_att>[,<mu< th=""><th>command, that allows to play audio streams in the AMR file format.</th></mu<></rec_att></play_att>	command, that allows to play audio streams in the AMR file format.
te_ul>[, <mute_dl>]]]]</mute_dl>	
	Parameters:
	<frame_type></frame_type>
	0 - AMR 4.75 (factory default)
	1 - AMR 5.15
	2 - AMR 5.95
	3 - AMR 6.70
	4 - AMR 7.40
	5 - AMR 7.95
	6 - AMR 10.2
	7 - AMR 12.2

80000ST10025a Rev. 24 - 2016-09-07

	<play_att> 0 - 0dB attenuation (factory default) 130 - 1dB/step attenuation</play_att>
	<rec_att> 0 - 0dB attenuation (factory default) 130 - 1dB/step attenuation</rec_att>
	<mute_ul> 0 – upink muting off (factory default) 1 – upink muting on</mute_ul>
	<mute_dl> 0 – downlink muting off (factory default) 1 – downlink muting on</mute_dl>
AT#SAMRCFG?	Read command reports the currently set parameters in the format: #SAMRCFG: <frame_type>,<play_att>,<rec_att>,<mute_ul>,<mute_dl></mute_dl></mute_ul></rec_att></play_att></frame_type>
AT#SAMRCFG=?	Test command returns the supported range of values for parameters <frame_type>, <play_att>, <rec_att>, <mute_ul> and <mute_dl>.</mute_dl></mute_ul></rec_att></play_att></frame_type>

## 3.5.7.21.8.4. Delete all audio files - #ADELA

#ADELA – Delete all audio files	5	<mark>SELINT 2</mark>
AT#ADELA	This command deletes all PCM audio files stored in the system.	modem file
AT#ADELA=?	Test command returns the OK result code	

#### 3.5.7.21.8.5. Delete audio file - #ADELF

#ADELF – Delete audio file	SELINT 2
AT#ADELF=	This command deletes a specific PCM audio file.
<filename></filename>	
	Parameter:
	<filename> - file name, string type with .pcm extension</filename>
AT#ADELF=?	Test command returns the OK result code

#### 3.5.7.21.8.6. List audio file - #ALIST

#### <mark>#ALIST – List audio file</mark>

<mark>SELINT 2</mark>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

AT#ALIST	This command lists all PCM audio files stored in the modem file system
	The response format is: #ALIST: <filename>,<filesize>,<crc><cr><lf></lf></cr></crc></filesize></filename>
	Parameter: <b><filename></filename></b> - file name, string type <b><filesize></filesize></b> - file size in bytes <b><crc></crc></b> - CRC16 poly (x^16+x^12+x^5+1) of file in hex format
	Note: CRC16 is calculated using the standard CRC16-CCITT $x^{16+x^{12}+x^{5+1}}$ polynomial (0x1021 representation) with initial value FFFF.
	Note: If a file is in use, CRC16 can't be calculated and execution command does not report <crc> for that file. Note: CRC calculation time depends on file size.</crc>
AT#ALIST=?	Test command returns the OK result code

# 3.5.7.21.8.7. Play an audio file - #APLAY

#APLAY – Play an audio file	SELINT 2
AT#APLAY= <mode>[,<dir>,<filename>]</filename></dir></mode>	This command plays PCM audio file on the speaker or uplink path. It's mandatory to specify the file extension and it's necessary to write file name between a couple of double inverted commas.
	Parameters: <mode></mode>
	<ul> <li>0 - stop to play, Optional parameters are not allowed (default value)</li> <li>1 - start to play, Optional parameters are mandatory</li> </ul>
	<dir>: select audio path. 0 - send to the speaker(default value) 1 - send to the uplink path</dir>
	<filename> - file name, string type with .pcm extension</filename>
	When the playing is stopped or an error occurs, an URC is provided with the following format:
	#APLAYEV: <result></result>
	Where: <result></result>
	0 – pcm play done 1 – pcm play error

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 677 of 717

80000ST10025a Rev. 24 - 2016-09-07

	Note: Feature supported only in idle mode Note: The format of mono PCM audio file is 8k samples/sec and 16 bits/sample.
AT#APLAY?	Read command reports the currently selected <b><mode>,<dir></dir></mode></b> in the format: #APLAY: <b><mode>,<dir></dir></mode></b>
AT#APLAY=?	Test command reports the supported range of values for the parameters <b><mode>,<dir></dir></mode></b> in the format: <b>#APLAY: (0,1),(0,1)</b>
Example	AT#APLAY = 1,0,"rec.pcm" OK #APLAYEV: 0

### 3.5.7.21.8.8. Record an audio file - #ARECD

#ARECD – Record an audio fil	
AT#ARECD= <mode>[,<filename>]</filename></mode>	This command records speech data coming from microphone in the modem file system with a PCM audio file format. It's mandatory to specify the file extension and it's necessary to write file name between a couple of double inverted commas.
	Parameter:
	<mode> 0 - stop to record, Optional parameter is not allowed (default value) 1 - start to record, Optional parameter is mandatory</mode>
	<filename> - file name, string type with .pcm extension</filename>
	When the recording is stopped or an error occurs, an URC is provided with the following format:
	#ARECDEV: <result></result>
	Where: <result> 0 – pcm record done 1 – pcm record error</result>
	Note: Feature supported only in idle mode Note: Filename has a maximum of 16 characters excluding double inverted commas.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 678 of 717

80000ST10025a Rev. 24 - 2016-09-07

	Note: The total size of all audio files must not be over <total size=""> in #ASIZE Note: Below 200 Kb of free space the file system could stop the recording and no more recordings are allowed.</total>	
AT#ARECD?	Read command reports the currently selected <b><mode></mode></b> in the format: #ARECD: <b><mode></mode></b>	
AT#ARECD=?	Test command reports the supported range of values for the parameters <mode> in the format: #ARECD: (0,1)</mode>	
Example	AT# ARECD =1,"rec.pcm" OK AT# ARECD =0 OK #ARECDEV: 0	

### 3.5.7.21.8.9. Receive an audio file - #ARECV

<b>#ARECV – Receive an audio fil</b>	e SELINT 2
AT#ARECV= <filename></filename>	This command allows user to receive a PCM audio file stored in the modem file system. It's mandatory to specify the file extension and it's necessary to write file name between a couple of double inverted commas. Parameters:
	<filename> - file name, string type with .pcm extension Note: The file should be sent using RAW ASCII file transfer. Hardware flow control</filename>
AT#ARECV =?	Test command returns the OK result code
Example	AT#ARECV= <filename> CONNECT</filename>
	Note: after the CONNECT, a PCM audio file has to be received from serial port

## 3.5.7.21.8.10. Send an audio file - #ASEND

#ASEND – Send an audio file SELINT 2

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 679 of 717

80000ST10025a Rev. 24 - 2016-09-07

AT#ASEND-	This command allows upon to cond a DCM and is file to point as the st
AT#ASEND= <filename>,<filesize></filesize></filename>	This command allows user to send a PCM audio file to serial port and store in the modem file system. It's mandatory to specify the file extension and it's necessary to write file name between a couple of double inverted
	commas.
	Parameters:
	<filename> - file name, string type with .pcm extension</filename>
	<filesize> - file size in bytes</filesize>
	When the sending is stopped or an error occurs, an URC is provided with the following format:
	#ASENDEV: <result></result>
	Where:
	<result></result>
	0 – pcm storing done
	1 – pcm storing error
	Note: Filename has a maximum of 16 characters excluding double inverted
	commas
	Note: Total size of all audio files must not be over <total size=""> in #ASIZE</total>
	Note: The file should be sent using RAW ASCII file transfer. Hardware flow control.
AT#ASEND=?	Test command returns the OK result code
Example	AT#ASEND="test.pcm",159182
Example	CONNECT
	OK
	#ASENDEV: 0
	Note: after the CONNECT, an audio file of 159182 bytes has to be sent to
	serial port

#### 3.5.7.21.8.11. Audio available size - #ASIZE

#ASIZE – Audio available size	SELINT 2
AT#ASIZE	This command shows residual space in bytes available to store PCM audio files.
	The response format is:
	#ASIZE: <total size="">,<used size="">,<free size=""></free></used></total>
	Note: Some configuration files are stored in file system and with empty

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

80000ST10025a Rev. 24 - 2016-09-07

	storage the <used_size> could be not zero. Moreover the file size on storage could differ from actual size due to block allocation.</used_size>
AT#ASIZE=?	Test command returns the OK result code

# 3.5.7.21.8.12. Find a specific audio file - #AFIND

#AFIND – Find a specific audio file		<mark>SELINT 2</mark>
AT#AFIND= <filename></filename>	This command finds a specific audio file.	
	Parameter: < <b>filename</b> > - file name, string type	
	Note: filename has a maximum of 16 characters.	
AT#AFIND=?	Test command returns the OK result code	

### 3.5.7.21.9. Miscellaneous commands

## 3.5.7.21.9.1. TeleType Writer - #TTY

<b>#TTY - TeleType Writ</b>	er SELINT 2
AT#TTY= <support></support>	Set command enables/disables the TTY functionality.
	Parameter: <support> 0 - disable TTY functionality (factory default) 1 - enable TTY functionality</support>
AT#TTY?	Read command returns whether the TTY functionality is currently enabled or not, in the format: #TTY: <support></support>
AT#TTY=?	Test command reports the supported range of values for parameter <b><support></support></b> .

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

## 3.5.7.22. Emergency call and eCall Management

#### 3.5.7.22.1. Dial an emergency call - #EMRGD

<mark>#EMRGD –</mark> dial an emergen	
AT#EMRGD[= <par>]</par>	This command initiates an emergency call.
	Parameters: <par>: 0 – initiates an emergency call without specifying the Service Category. (default value)</par>
	<ul> <li>131 - sum of integers each representing a specific Emergency Service Category:</li> <li>1 - Police</li> <li>2 - Ambulance</li> <li>4 - Fire Brigade</li> <li>8 - Marine Guard</li> <li>16 - Mountain Rescue</li> </ul>
	32 - Manually Initiated eCall (if eCall is supported – Rel8 feature)
	64 - Automatically Initiated eCall (if eCall is supported- Rel8 feature)
	When the emergency call can initiate, an indication of the Service Categories selected is shown before the OK in the following format:
	#EMRGD: <serv>[,<serv>[,<serv]]< th=""></serv]]<></serv></serv>
	Where
	<serv>     "Police     "Ambul"     "FireBrig"     "MarineGuard"     "MountRescue"     "MIeC"     "AIeC"</serv>
	Example:
	AT#EMRGD=17 #EMRGD: "Police"," MountRescue "
	ОК

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 682 of 717

80000ST10025a Rev. 24 - 2016-09-07

AT#EMRGD	The execution command initiates an emergency call without specifying the Service Category.
AT#EMRGD?	The read command reports the emergency numbers received from the network (Rel5 feature) and the associated service categories in the format
	[#EMRGD: <num1>[,<par1>,<serv>[,<serv>[,<serv]]] [#EMRGD: <num<i>n&gt;[,<par<i>n&gt;,<serv>[,<serv>[,<serv]]]]< th=""></serv]]]]<></serv></serv></par<i></num<i></serv]]] </serv></serv></par1></num1>
	Where
	< <b>num</b> <i>n</i> > Is the emergency number (that can be dialled with ATD command).
	<parn> 131 - sum of integers each representing a specific Emergency Service Category: <ul> <li>1 - Police</li> <li>2 - Ambulance</li> <li>4 - Fire Brigade</li> <li>8 - Marine Guard</li> <li>16 - Mountain Rescue</li> </ul></parn>
	32 - Manually Initiated eCall (if eCall is supported – Rel8 feature)
	64 - Automatically Initiated eCall (if eCall is supported-Rel8 feature)
	Example:
	AT#EMRGD? #EMRGD: 123,2,"Ambul" #EMRGD: 910,5,"Police","FireBrig"
	ОК
AT#EMRGD=?	Test command reports the supported range of values for parameter <b><par></par></b> .
	If eCall is supported 0-32,64
	If eCall is not supported 0-31

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 683 of 717

80000ST10025a Rev. 24 - 2016-09-07

<mark>#MSDPUSH – IVS push</mark>	mode activation	SELINT 2
AT#MSDPUSH	Execution command enables IVS to iss transmission. It reuses downlink signal to the PSAP.	
AT#MSDPUSH=?	Test command returns the <b>OK</b> result co	ode.

#### 3.5.7.22.3. Sending MSD data to IVS - #MSDSEND

#MSDSEND – Sending MSD d	ata to IVS SELINT 2
AT#MSDSEND	Execution command allows to send 140 bytes of MSD data to the IVS embedded while modem is in command mode.
	The device responds to the command with the prompt '>' and waits for the MSD to send.
	To complete the operation send <b>Ctrl-Z</b> char ( <b>0x1A</b> hex); to exit without writing the message send <b>ESC</b> char ( <b>0x1B</b> hex).
	If data are successfully sent, then the response is <b>OK</b> . If data sending fails for some reason, an error code is reported
	Note: the maximum number of bytes to send is 140; trying to send more data will cause the surplus to be discarded and lost.
AT#MSDSEND=?	Test command returns the <b>OK</b> result code.

#### 3.5.7.22.4. Read MSD - #MSDREAD

#MSDREAD- Read MSD	SELINT 2
AT#MSDREAD	Execution command returns the last MSD set by <b>#MSDSEND</b>
AT#MSDREAD?	Read command returns the last MSD set by <b>#MSDSEND</b>
AT#MSDREAD=?	Test command returns OK
Example	
	AT#MSDREAD
	> 234234234234
	OK
	AT#MSDREAD
	#MSDREAD:

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 684 of 717

80000ST10025a Rev. 24 - 2016-09-07

$\begin{array}{c} 234234234234000000000000000000000000000$
OK

### 3.5.7.22.5. Initiate eCall - +CECALL

+CECALL – Initiate eCall	SELINT 2
AT+CECALL= <type of<br="">eCall&gt;</type>	Set command is used to trigger an eCall to the network. Based on the configuration selected, it can be used to either trigger a test call, a reconfiguration call, a manually initiated call or an automatically initiated call. Parameters: <type ecall="" of="">: 0 – test call 1 – reconfiguration call 2 – manually initiated eCall 3 – automatically initiated eCall</type>
AT+CECALL?	Read command returns the type of eCall that is currently in progress in the format: +CECALL: [ <type ecall="" of="">]</type>
AT+CECALL=?	Test command reports the supported range of values for parameter <b><type< b=""> of eCall&gt;.</type<></b>

## 3.5.7.22.6. Embedded IVS inband modem enabling - #ECALL

#ECALL – Embedded IVS inband modem enabling SELINT 2		SELINT 2
AT#ECALL= <mode></mode>	Set command enables/disables the embedded IVS moder	m.
	Parameters:	
	<mode>:</mode>	
	0 - disable IVS (default)	
	1 - enables IVS	
	Note: This functionality has to be enabled only with	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 685 of 717

	AT#CPUMODE=3 (only in 10.0X.XXX and 16.0X.XXX SW releases).
	Note: the sending of a MSD is pointed out with an unsolicited message through AT interface that can report the HL-ACK data bits or an error code in the following format:
	#ECALLEV: <prim>,<data></data></prim>
	<prim>: 0 - Pull-IND 1 - Data_CNF 2 - AL-Ack 16 - sync loss</prim>
	<data>: Data content of Application Layer message (only with AL-Ack)</data>
	Note: the value set by command is not saved and a software or hardware reset restores the default value. The value can be stored in NVM using profiles.
	Note: When IVS modem is enabled PCM playing, PCM recording and DTMF decoding are automatically disabled (AT#SPCM or AT#DTMF will return error).
	Note: +CECALL command supersedes this command because it enables automatically eCall functionality.
AT#ECALL?	Read command reports the currently selected <b><prim></prim></b> in the format:
	#ECALL: <mode></mode>
	<mode>: 0 – IVS disabled 1 – IVS enabled</mode>
AT#ECALL =?	Test command reports supported range of values for all parameters.

#### 3.5.7.22.7. Set eCall Only mode - #ECONLY

<b>#ECONLY – set eCall Only mod</b>	le	<mark>SELINT 2</mark>
AT#ECONLY= <mode></mode>	This command enables/disables the eCall Only mode of	operation.

80000ST10025a Rev. 24 - 2016-09-07

	<ul> <li>Parameters:</li> <li><mode>:</mode></li> <li>0 - disable eCall Only mode, normal mode</li> <li>1 - enable eCall Only mode if eCall only subscription is available (default)</li> <li>2 - enable eCall Only mode even if eCall only subscription is not available</li> <li>Note: the value set by command is directly stored in NVM and doesn't depend on the specific CMUX instance.</li> <li>Note: the new setting can cause an automatic reboot of module.</li> </ul>
AT#ECONLY?	Read command reports the currently selected <mode> and <status> in the format:         #ECONLY: <mode>,<status>         Parameters:         <status>:         0 - eCall only mode doesn't apply         1 - eCall only mode applies         2 - eCall only mode applies, but T3242 or T3243 are running</status></status></mode></status></mode>
AT#ECONLY=?	Test command reports the supported range of values for parameter <b><mode></mode></b> .

## 3.5.7.22.8. Configure Network Deregister Timer - #ECALLNWTMR

<b>#ECALLNWTMR – Configure</b>	Network Deregister Timer	<mark>SELINT 2</mark>
AT#ECALLNWTMR=	Set command sets timers which are related network deregistration	
[ <deregister_timer>]</deregister_timer>		
	Parameters:	
	<pre><deregister_timer> - integer</deregister_timer></pre>	
	Timer value in units of minutes:	
	12184 – Set the time after which the GSM and UMTS module terminates network registration (default value:	
	Note: The setting is saved in NVM and available on for	llowing reboot.
AT# ECALLNWTMR?	Read command reports the current parameter value.	
AT# ECALLNWTMR=?	Test command reports the supported range of values fo	r parameters

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 687 of 717

80000ST10025a Rev. 24 - 2016-09-07

## 3.5.7.23. Reconfigure eCall Timer - #ECALLTMR

<b>#ECALLTMR - Reconfigure eC</b>	CALL Timer SELINT 2
AT#ECALLTMR=	Set command sets timers related eCall.
[ <al_ack_period></al_ack_period>	
, <signal_duration></signal_duration>	Parameters:
, <send_msd_period></send_msd_period>	<al_ack_period> - integer</al_ack_period>
, <msd_max_trasmit_ti< th=""><th>Timer value in units of milliseconds:</th></msd_max_trasmit_ti<>	Timer value in units of milliseconds:
ME>	100065535 – set AL-ACK Period (default value: 5000)
]	
	<signal_duration> - integer</signal_duration>
	Timer value in units of milliseconds:
	1000 65535 – set the IVS initiation signal duration (default value: 2000)
	<send_msd_period> - integer</send_msd_period>
	Timer value in units of milliseconds:
	100065535 – set the SEND_MSD duration (default value: 5000)
	MOD MAN TDAGMIT TIMES
	< <u>MSD_MAX_TRASMIT_TIME&gt;</u> - integer
	Timer value in units of seconds:
	1065535 – set the maximum MSD transmission duration (Default
	value:20).
	If a value is omitted for a particular parameter then this parameter will be
	keep old set value
	keep old set value
	Note: The setting is saved in NVM and available without reboot.
AT# ECALLTMR?	Read command reports the current parameter value.
	read commune reports die current parameter value.
AT# ECALLTMR=?	Test command reports the supported range of values for parameters

#### 3.5.7.24. SSL Commands

### **3.5.7.24.1.** Configure general parameters of a SSL socket - #SSLCFG

<b>#SSLCFG – Configure gen</b>	eral parameters of a SSL socket	SELINT 2
AT#SSLCFG= <ssid>,</ssid>	This command allows configuring SSL connect	tion parameters.
<cid>,<pktsz>,</pktsz></cid>		
<maxto>,</maxto>	Parameters:	
<defto>,<txto>[,</txto></defto>	<ssid> - Secure Socket Identifier</ssid>	
<sslsringmode>[,</sslsringmode>	1 - Until now SSL block manages only one so	cket
<nocarriermode>[,</nocarriermode>		
<unused_1>[,</unused_1>	<cid> - PDP Context Identifier.</cid>	
<unused_2>]]]]</unused_2>	1 - Until now only context one is supported.	
	<pre><pktsz> - packet size to be used by the SSL/TC 0 - select automatically default value (300).</pktsz></pre>	CP/IP stack for data sending.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 688 of 717

11500 - packet size in bytes.
<maxto> - exchange timeout (or socket inactivity timeout); in online mode, if there's no data exchange within this timeout period the connection is closed. 0 - no timeout</maxto>
165535 - timeout value in seconds (default 90 s.)
<defto> - Timeout that will be used by default whenever the corresponding parameter of each command is not set. 105000 - Timeout in tenth of seconds (default 100).</defto>
<txto> - data sending timeout; in online mode after this period data are sent also if they're less than max packet size.</txto>
0 - no timeout 1255 - timeout value in hundreds of milliseconds (default 50).
<sslsringmode> - sslSRing unsolicited mode.</sslsringmode>
0 – SSLSRING disabled
1 – SSLSRING enabled in the format SSLSRING: <ssid>,<recdata></recdata></ssid>
where <ssid> is the secure socket identifier and <recdata> is the amount of</recdata></ssid>
data received and decoded by the SSL socket.
A new unsolicited is sent whenever the amount of data ready to be read changes. Only a record is decoded at once so, any further record is received and decoded only after the first have been read by the user by means of the #SSLRECV command. 2 – SSLSRING enabled in the format
SSLSRING: <ssid>,<datalen>,<data></data></datalen></ssid>
where <ssid> is the secure socket identifier, <datalen> is the length of the current chunk of data (the minimum value between the available bytes and 256) and <data> is data received (<datalen> bytes) displayed in ASCII format.</datalen></data></datalen></ssid>
<nocarriermode> - this parameter permits to choose NO CARRIER indication format when the secure socket is closed as follows:</nocarriermode>
0 - NO CARRIER
(default) Indication is sent as usual, without additional information
1 – NO CARRIER:SSL, <ssid></ssid>
Indication of current <b><ssid></ssid></b> secure socket connection is added. The fixed "SSL" string allows the user to distinguish secure sockets from TCP sockets
2 – NO CARRIER:SSL, <ssid>,<cause></cause></ssid>
Indication of current <b><ssid></ssid></b> secure socket connection and closure <b><cause></cause></b>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

page 689 of 717

80000ST10025a Rev. 24 – 2016-09-07

	are added.
	Following the possible <b><cause></cause></b> values are listed:
	0 – not available (secure socket has not yet been closed
	1 – the remote TCP connection has been closed with a fatal error
	(RST is included within this case)
	2 – socket inactivity timeout
	3 – network deactivation (PDP context deactivation from network)
	4 – SSL "Close Notify Alert" message has been received
	5 – SSL EOF condition occurred. It means that a TCP FIN has been
	received
	6 – Closure due to any other SSL alert different from the previous
	ones.
	Note: if secure socket is not enabled using <b>#SSLEN</b> only test requests can
	be made. Read command can be issued if at least a <ssid> is enabled.</ssid>
	Note: these parameters cannot be changed if the secure socket is connected.
	Note: these values are automatically saved in NVM.
AT#SSLCFG?	Read command reports the currently selected parameters in the format:
AI#SSLCFG:	Read command reports the currentry selected parameters in the format.
	#SSLCFG:
	<ssid1>,<cid>,<pktsz>,<maxto>,<defto><txto>,<sslsringmod< th=""></sslsringmod<></txto></defto></maxto></pktsz></cid></ssid1>
	e>, <nocarriermode>,0,0</nocarriermode>
AT#SSLCFG =?	Test command returns the range of supported values for all the parameters.
	#SSLCFG: (1),(1),(0-1500),(0-65535),(10-5000),(0-255),(0-2),(0-2),(0),(0)

### 3.5.7.24.2. Opening a socket SSL to a remote server - #SSLD

#SSLD – Opens a socket SSL to a remote server SELINT 2	
AT#SSLD= <ssid>,</ssid>	Execution command opens a remote connection via socket secured through
<rport>,<ipaddress>,</ipaddress></rport>	SSL. Both command and online modes can be used.
<closuretype>[,</closuretype>	In the first case 'OK' is printed on success, and data exchange can be
<connmode>[,</connmode>	performed by means of #SSLSEND and #SSLRECV commands.
<timeout>]]</timeout>	In online mode ' <b>CONNECT</b> ' message is printed, and data can be sent/received directly to/by the serial port. Communication can be suspended by issuing the escape sequence (by default +++) and restored with #SSLO command.
	Parameters:
	<ssid> - Secure Socket Identifier</ssid>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 690 of 717

1 - Until now SSL block manage only one socket
< <b>rPort</b> > - Remote TCP port to contact 165535
<ipaddress> - address of the remote host, string type. This parameter can be either:</ipaddress>
<ul> <li>any valid IP address in the format: "xxx.xxx.xxx."</li> <li>any host name to be solved with a DNS query</li> </ul>
<b>ClosureType&gt; -</b> how to close SSL socket 0 – SSL session id and keys are free then <b>AT#SSLFASTD</b> can't be used to recover the last SSL session [default].
1 - SSL session id and keys are saved and a new connection can be made without a complete handshake using <b>AT#SSLFASTD</b> .
<connmode> - connection mode 0 - online mode connection.</connmode>
1 - command mode connection (factory default).
<b>Timeout&gt;</b> - time-out in 100 ms units. It represents the maximum allowed TCP inter-packet delay. It means that, when more data is expected during the handshake, the module awaits <timeout> * 100 msecs for the next packet. If no more data can be read, the module gives up the handshake and raises an ERROR response. Note: IT'S NOT the total handshake timeout or, in other words, it's not the absolute maximum time between the #SSLD issue and the CONNECT/OK/ERROR response. Though by changing this parameter you can limit the handshake duration (for example in case of congested network or busy server), there's no way to be sure to get the command response within a certain amount of time, because it depends on the TCP connection time, the handshake time and the computation time (which depends on the authentication mode and on the size of keys and certificates). 105000 - hundreds of ms (factory default is 100)</timeout>
Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.
Note: if timeout is not set for SSL connection the default timeout value, set by <b>AT#SSLCFG</b> , is used.
Note: in online mode the socket is closed after an inactivity period (configurable with #SSLCFG, with a default value of 90 seconds), and the ' <b>NO CARRIER</b> ' message is printed.
Note: in online mode data are transmitted as soon as the data packet size is

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 691 of 717

	<ul> <li>reached or as after a transmission timeout. Both these parameters are configurable by using #SSLCFG.</li> <li>Note: if there are input data arrived through a connected socket and not yet read because the module entered command mode before reading them (after an escape sequence or after #SSLD has been issued with <connmode> set to command mode connection), these data are buffered and we receive the SSLSRING URC (if any of its presentation formats have been enabled by means the #SSLCFG command); it's possible to read these data afterwards issuing #SSLRECV. Under the same hypotheses it's possible to send data while in command mode issuing #SSLSEND.</connmode></li> <li>Note: Before opening a SSL connection the GPRS context must have been activated by AT#SGACT=1,1.</li> <li>Note: Before opening a SSL connection, make sure to have stored the needed secure data (Certificate, CA certificate, private key), using AT#SSLSECDATA, for the security level set through AT#SSLSECCFG.</li> </ul>
AT#SSLD=?	Test command returns the range of supported values for all the parameters: #SSLD: (1),(1-65535),,(0,1),(0,1),(10-5000)

## 3.5.7.24.3. Enabling a SSL socket - #SSLEN

<b>#SSLEN – Enable a SSL so</b>	cket SELINT 2
AT#SSLEN= <ssid>,<en< th=""><th>This command enables a socket secured by SSL</th></en<></ssid>	This command enables a socket secured by SSL
able>	Parameters:
	<ssid> - Secure Socket Identifier</ssid>
	1 – Until now SSL block manages only one socket
	<enable></enable>
	0 – deactivate secure socket [default]
	1 – activate secure socket
	Note: if secure socket is not enabled only test requests can be made for every SSL command except #SSLS (SSL status) which can be issued also if the socket is disable Read commands can be issued if at least a <ssid> is enabled.</ssid>
	Note: these values are automatically saved in NVM.
	Note: a SSL socket cannot be disabled by issuing #SSLEN=1,0 if it is connected.
AT#SSLEN?	Read command reports the currently enable status of secure socket in the

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 692 of 717

80000ST10025a Rev. 24 - 2016-09-07

#SSLEN – Enable a S	#SSLEN – Enable a SSL socket	
	format: #SSLEN: <ssid>,<enable><cr><lf> <cr><lf> OK</lf></cr></lf></cr></enable></ssid>	
AT#SSLEN=?	Test command returns the range of support parameters: #SSLEN: (1),(0,1)	ed values for all the

## 3.5.7.24.4. Fast redial of a SSL socket - #SSLFASTD

#SSLFASTD – Fast redial of	a SSL socket SELINT 2
AT#SSLFASTD= <ssid>[,</ssid>	This command allows to restart the last SSL connection without a
<connmode>[,</connmode>	complete handshake. In this way the dial is performed faster and with a
<timeout>]]</timeout>	lower amount of tCP payload.
	Parameters:
	<b>SSId&gt;</b> - Secure Socket Identifier
	1 - Until now SSL block manage only one socket.
	<connmode> - connection mode</connmode>
	0 - online mode connection.
	1 – command mode connection (factory default).
	< <b>Timeout</b> > - time-out in 100 ms units. It represents the TCP inter-packet delay.
	Note: it DOES NOT represent the total handshake timeout.
	105000 - hundreds of ms (factory default is 100).
	Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.
	can be made.
	Note: if timeout is not set for SSL connection the default timeout value, set by <b>AT#SSLCFG</b> , is used.
	Note: Before opening a SSL connection the GPRS context must have been activated by <b>AT#SGACT=X,1</b> .
	Note: if an error occurs during reconnection, the socket can not be reconnected and then a new connection has to be done.
	Note: if the remote server cleans SessionID cache before

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 693 of 717

	reconnection the full handshake will be made.
AT#SSLFASTD=?	Test command returns the range of supported values for all the parameters:
	#SSLFASTD: (1),(0,1),(10-5000)

#### 3.5.7.24.5. Closing a SSL socket - #SSLH

#SSLH – Close a SSL socket	SELINT 2
AT#SSLH= <ssid>[,</ssid>	This command allows closing the SSL connection.
<closuretype>]</closuretype>	
	Parameters:
	<ssid> - Secure Socket Identifier</ssid>
	1 - Until now SSL block manage only one socket.
	< ClosureType >: how to close SSL socket
	0 – SSL session id and keys are free then <b>AT#SSLFASTD</b> can not be
	used to recover the last SSL session.
	1 - SSL session id and keys are saved and a new connection can be made without a complete handshake using <b>AT#SSLFASTD</b> .
	Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.
	Note: in client side if < ClosureType > is not set the value set into AT#SSLD is used.
AT#SSLH=?	Test command returns the range of supported values for all the parameters:
	#SSLH: (1),(0,1)

## 3.5.7.24.6. Restoring a SSL socket after a +++ - #SSLO

#SSLO – Restore a SSL so	<mark>cket after a +++</mark>	SELINT 2
AT#SSLO= <ssid></ssid>	This command allows to restore a SS suspended by an escape sequence (++ CONNECT message is printed. Please note that this is possible even command mode (#SSLD with <conn< th=""><th>++). After the connection restore, the if the connection has been started in</th></conn<>	++). After the connection restore, the if the connection has been started in
	Parameters: <b>SSId&gt;</b> - Secure Socket Identifier 1 - Until now SSL block manage on	ily one socket.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 694 of 717

	Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made. Note: Before opening a SSL connection the GPRS context must
	have been activated by <b>AT#SGACT=X,1</b> . Note: if an error occur during reconnection the socket can not be reconnected then a new connection has to be done.
AT#SSLO=?	Test command returns the range of supported values for all the parameters: #SSLO: (1)

## 3.5.7.24.7. Reading data from a SSL socket - #SSLRECV

<mark>#SSLRECV –</mark> Read data froi
AT#SSLRECV - Kead data iroi AT#SSLRECV= <ssid>, <maxnumbyte> [,<timeout>]</timeout></maxnumbyte></ssid>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 695 of 717

	If data are received the device respondes: #SSLRECV: NumByteRead <cr><lf> (Data read) <cr><lf> <cr><lf> OK</lf></cr></lf></cr></lf></cr>
	Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.
	Note: if timeout is not set for SSL connection the default timeout value, set through <b>AT#SSLCFG</b> , is used.
	Note: before receiving data from the SSL connection it has to be established using <b>AT#SSLD</b> .
AT#SSLRECV=?	Test command returns the range of supported values for all the parameters:
	#SSLRECV: (1),(1-1000),(1-5000)

## **3.5.7.24.8.** Reporting the status of a SSL socket - #SSLS

<mark>#SSLS – Report the sta</mark>	SSLS – Report the status of a SSL socket SELINT 2	
AT#SSLS= <ssid></ssid>	This command reports the status of secure sockets.	
	Parameters:	
	<ssid> - Secure Socket Identifier 1 - Until now SSL block manages only one socket</ssid>	
	If secure socket is connected the device responds to the command:	
	#SSLS: <ssid>,2,<ciphersuite></ciphersuite></ssid>	
	otherwise:	
	#SSLS: <ssid>,<connectionstatus></connectionstatus></ssid>	
	<connectionstatus> available values are:</connectionstatus>	
	0 – Socket Disabled	
	1 – Connection closed	
	2 – Connection open	
	Note: this command can be issued even if the <ssid> is not enabled.</ssid>	

80000ST10025a Rev. 24 - 2016-09-07

AT#SSLS=?	Test command returns the range of supported values for all the parameters.
	#SSLS: (1)

## 3.5.7.24.9. Configuring security parameters of a SSL socket - #SSLSECCFG

<b>#SSLSECCFG - Config</b>	ure security parameters of a SSL socket	SELINT 2
AT#SSLSECCFG=	This command allows configuring SSL connection	parameters.
<ssid>,</ssid>		
<ciphersuite>,</ciphersuite>	Parameters:	
<auth_mode></auth_mode>	< <b>SSId&gt;</b> - Secure Socket Identifier	
	1 - Until now SSL block manage only one socket	
	<ciphersuite></ciphersuite>	
	0 - Chiper Suite is chosen by remote Server [defa	ultl
	1 - TLS RSA WITH RC4 128 MD5	
	2 - TLS RSA WITH RC4 128 SHA	
	3 - TLS_RSA_WITH_AES_256_CBC_SHA	
	<auth_mode></auth_mode>	
	0 - SSL verify none [default]	
	1 - Manage server authentication	
	2 - Manage server and client authentication if req remote server	uested by the
	Temote server	
	Note: if SSL verify none is set no security data are	needed(Client certificate.
	Server CAcertificate and Client private key).	,
	Note: if only server authentication is managed ther	
	CAcertificate has to be stored through AT#SSLSE	CCDATA.
	Note: if server and client authentication are manag	ad than alight
	certificate and private key, and server CAcertificat	
	AT#SSLSECDATA. Please note that private keys	
	supported,	with pussword are not
	11	
	Note: only "rsa_sign" certificates are supported by	the Telit Module in client
	authentication. The remote server must support this	s certificate type, otherwise
	the handshacke will fail.	
		<b>T</b> 1 4 4 4 1
	Note: if secure socket is not enabled using <b>#SSLE</b> made. Read command can be issued if at least a <s< th=""><th></th></s<>	
	maue. Reau commanu can de issueu îl al least a <3	
	Note: these values are automatically saved in NVM	4.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 697 of 717

AT#SSLSECCFG?	Read command reports the currently selected parameters in the format:
	#SSLSECCFG: <ssid1>,<ciphersuite>,<auth_mode></auth_mode></ciphersuite></ssid1>
AT#SSLSECCFG =?	Test command returns the range of supported values for all the parameters.

#### 3.5.7.24.10. Managing the security data - #SSLSECDATA

<b>#SSLSECDATA – Mana</b>	ze the security data SELINT 2
AT#SSLSECDATA	This command allows to store, delete and read security data (Certificate,
= <ssid>,<action>,</action></ssid>	CAcertificate, private key) into NVM.
<datatype>[,<size>]</size></datatype>	
	Parameters:
	<ssid> - Secure Socket Identifier</ssid>
	1 - Until now SSL block manages only one socket.
	<action> - Action to do.</action>
	0 – Delete data from NVM.
	1 – Store data into NVM.
	2 – Read data from NVM .
	<datatype></datatype>
	0 – Certificate.
	1 - CA certificate.
	2 – RSA Private key.
	<size> - Size of security data to be stored</size>
	12047
	If the <action> parameter is 1 (store data into NVM) the device</action>
	responds to the command with the prompt '>' and waits for the data to store.
	To complete the operation send Ctrl-Z char $(0x1A \text{ hex})$ ; to exit without
	writing the message send ESC char $(0x1B hex)$ .
	If data are successfully stored, then the response is OK; if it fails for some
	reason, an error code is reported.
	If the <b><action></action></b> parameter is 2 (read data from NVM), data specified by
	<b>DataType&gt;</b> parameter is shown in the following format:
	#SSLSECDATA: <connid>,<datatype></datatype></connid>
	#SSLSECDATA: <connid>,<datatype></datatype></connid>
	ОК

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 698 of 717

	If <b><datatype></datatype></b> data has not been stored (or it has been deleted) the response has the following format: #SSLSECDATA: <b><connid>,<datatype></datatype></connid></b> No data stored OK
	Note: Secured data has to be in PEM format.
	Note: private keys with password ARE NOT supported.
	Note: only "rsa_sign" certificates are supported by the Telit Module in client authentication. The remote server must support this certificate type, otherwise the handshacke will fail.
	Note: <b><size></size></b> parameter is mandatory if the <write> action is issued, but it has to be omitted for <delete> or <read> actions are issued.</read></delete></write>
	Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.
	Note: If socket is connected an error code is reported.
AT#SSLSECDATA?	Read command reports what security data are stored in the format:
	#SSLSECDATA: <ssid 1="">,<certisset>,<cacertisset>,<privkeyisset></privkeyisset></cacertisset></certisset></ssid>
	<certisset>, <cacertisset>, <privkeisset> are 1 if related data are stored into NVM otherwise 0.</privkeisset></cacertisset></certisset>
AT#SSLSECDATA =?	Test command returns the range of supported values for all the parameters:
	#SSLSECDATA: (1),(0-2),(0-2),(1-2047)

#### 3.5.7.24.11. Sending data through a SSL socket - #SSLSEND

ugh a SSL socket	<mark>SELINT 2</mark>
This command allows sending data through a se	cure socket.
Parameters:	
<ssid> - Secure Socket Identifier</ssid>	
1 - Until now SSL block manage only one sock	ket.
	This command allows sending data through a se Parameters:

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 699 of 717

AT#SSLSEND=?	Note: Before sending data through the SSL connection it has to be established using AT#SSLD.         Test command returns the range of supported values for all the
	Note: if timeout is not set for SSL connection the default timeout value, set by <b>AT#SSLCFG</b> , is used.
	Note: if secure socket is not enabled using <b>AT#SSLEN</b> only test requests can be made.
	Note: the maximum number of bytes to send is 1023; trying to send more data will cause the surplus to be discarded and lost.
	If data are successfully sent, then the response is OK. If data sending fails for some reason, an error code is reported
	The device responds to the command with the prompt '>' and waits for the data to send. To complete the operation send Ctrl-Z char ( $0x1A$ hex); to exit without writing the message send ESC char ( $0x1B$ hex).
	< Timeout > - socket send timeout, in 100 ms units. 15000 - hundreds of ms (factory default is 100)

## 3.5.7.24.12. Sending data through a secure socket in Command Mode extended - #SSLSENDEXT

#SSLSENDEXT – Send data through a secure socket in Command Mode extended SELINT 2	
AT#SSLSENDEXT=	This command allows sending data through a secure socket.
<ssid>,<bytestosend>[,</bytestosend></ssid>	
<timeout>]</timeout>	Parameters:
	<ssid> - Secure Socket Identifier</ssid>
	1 - Until now SSL block manage only one socket.
	 bytestosend> - number of bytes to be sent
	Please refer to test command for range
	<timeout> - time-out in 100 ms units</timeout>
	15000 - hundreds of ms (factory default is 100)
	The device responds to the command with the prompt '>' <greater than=""><space> and waits for the data to send.</space></greater>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 700 of 717

	<ul> <li>When <bytestosend> bytes have been sent, operation is automatically completed.</bytestosend></li> <li>If data are successfully sent, then the response is OK.</li> <li>If data sending fails for some reason, an error code is reported.</li> <li>Note: if secure socket is not enabled using AT#SSLEN only test requests can be made.</li> <li>Note: if timeout is not set for SSL connection the default timeout value, set by AT#SSLCFG, is used.</li> <li>Note: Before sending data through the SSL connection it has to be established using AT#SSLD.</li> <li>Note: all special characters are sent like a generic byte. (For instance: 0x08 is simply sent through the socket and don't behave like a BS, i.e. previous character is not deleted).</li> </ul>
AT#SSLSENDEXT =?	Test command returns the range of supported values for parameters <\$SId>, <bytestosend> and <timeout>.#SSLSENDEXT: (1),(1-1500),(1-5000)</timeout></bytestosend>
Example	Open the socket in command mode: at#ssld=1,443, <port>,"IP address",0,1 OK Give the command specifying total number of bytes as second parameter: at#sslsendext=1,256,100</port>

#### 3.5.7.25. m2mAIR Cloud Commands

#### 3.5.7.25.1. Configure deviceWISE parameters - #DWCFG

<b>#DWCFG – configure d</b>	eviceWISE parameters SELINT 2
AT#DWCFG=[ <server< th=""><th>1 – auto-reconnect lazy - reconnect on next send and every 3600 seconds.</th></server<>	1 – auto-reconnect lazy - reconnect on next send and every 3600 seconds.
Url>[, <deviceidselecto< th=""><th>2 - auto-reconnect moderate (default) - reconnect 120 seconds, then every 3600</th></deviceidselecto<>	2 - auto-reconnect moderate (default) - reconnect 120 seconds, then every 3600
r>[, <apptoken>[,<sec< th=""><th>seconds after the first day.</th></sec<></apptoken>	seconds after the first day.
urity>[, <heartbeat>[,&lt;</heartbeat>	3 – auto-reconnect aggressive - reconnect every 120 seconds.
autoReconnect>[, <over< th=""><th></th></over<>	
flowHandling>[, <atrun< th=""><th><pre><overflowhandling> - Flag indicating if the way to handle overflows in data</overflowhandling></pre></th></atrun<>	<pre><overflowhandling> - Flag indicating if the way to handle overflows in data</overflowhandling></pre>
InstanceId>[, <servicet< th=""><th>management.</th></servicet<>	management.
imeout>[, <contextid>]</contextid>	0 – FIFO (default)
, <unused_1>[,<unused< th=""><th>1 - LIFO</th></unused<></unused_1>	1 - LIFO
_2>]]]]]]]]]]	
1111111111	<atruninstanceid> - AT instance that will be used by the service to run the AT Command. Default 4 Range 0 – 4</atruninstanceid>
	<servicetimeout> - It defines in seconds the maximum time interval for a service request to the server. Default 5 Range 1 – 120</servicetimeout>
	<contextid> - the PDP context used for the network connection. Default 1 Range 1 – 5</contextid>
AT#DWCFG?	Read command returns the current settings in the format:
	#DWCFG: <serverurl>,<deviceidselector>,<apptoken>,<security>,<heartbeat>,<auto Reconnect&gt;,<overflowhandling>,<atruninstanceid>,<servicetimeout>,<cont extID&gt;,0,0</cont </servicetimeout></atruninstanceid></overflowhandling></auto </heartbeat></security></apptoken></deviceidselector></serverurl>
AT#DWCFG=?	Test command returns the supported range of parameters <deviceidselector>, <security>, <heartbeat>, <autoreconnect>, <coverflowhandling>, <atruninstanceid> , <servicetimeout>,<contextid>, <unused_1> and <unused_2>, and the maximum length of <serverurl> and <apptoken> parameters.</apptoken></serverurl></unused_2></unused_1></contextid></servicetimeout></atruninstanceid></coverflowhandling></autoreconnect></heartbeat></security></deviceidselector>

#### 3.5.7.25.2. Connect to M2M Service - #DWCONN

 #DWCONN - connect to M2M Service
 SELINT 2

 AT#DWCONN=<connect>
 Set command connects/disconnects to the M2M Service.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 702 of 717

-

## AT Commands Reference Guide

80000ST10025a Rev. 24 - 2016-09-07

	Parameters: < <b>connect&gt;</b> - flag to connect/disconnect to the M2M Service 0 – disconnect (default) 1 – connect Note: <b>AT#DWCONN=1</b> performs the socket connection and the MQTT connection. <b>AT#DWCONN=0</b> performs the socket disconnection. Note: the PDP Context used for the network connection is the first ( <b><cid>=1</cid></b> has to be previously defined with <b>AT+CGDCONT</b> command and activated with <b>AT#SGACT</b> command) Note: if the secure mode connection has been enabled, it cannot be used contemporarily to any command starting an SSL connection (including SSL sockets, FTPS, secure SMTP and HTPS).
AT#DWCONN?	Read command returns the current settings for all parameters in the format: #DWCONN: <connect>&gt;,<status></status></connect>
	Where:
	<connect> is defined as above <status> is the real connection status. Values:</status></connect>
	0 = disconnected
	1 = trying to connect
	2 = connected 3 = waiting to connect
AT#DWCONN=?	Test command reports the supported range of values for all parameters

## 3.5.7.25.3. Query connection status - #DWSTATUS

#DWSTATUS - query con	nection status SELINT 2
AT#DWSTATUS	Execution command returns the status of the connection, including some runtime statistics. Note, all statistics should be stored in RAM, not NVM. The Cloud will return a generic structure
	<pre>#DWSTATUS: <connected><lasterrorcode>,<latency>,<pktsin>,<pktsout>,<bytesi n&gt;,<bytesout> <connected>: 3 = waiting to connect, 2 = connected, 1 = trying to</connected></bytesout></bytesi </pktsout></pktsin></latency></lasterrorcode></connected></pre>

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 703 of 717

80000ST10025a Rev. 24 - 2016-09-07

	<pre>connect, 0 = disconnected <lasterrorcode>: last error code encountered by the client <latency> : milliseconds measured between last request and reply. <pktsin> : number of packets received, tracked by the server <pktsout> : number of packets sent. <bytesin> : number of bytes received, TCP/IP payload <bytesout> : number of bytes sent.</bytesout></bytesin></pktsout></pktsin></latency></lasterrorcode></pre>
AT#DWSTATUS=?	Test command reports <b>OK</b> result code

### 3.5.7.25.4. Send data to M2M Service - #DWSEND

#DWSEND – send da	ta to M2M Service	SELINT 2
AT#DWSEND=	Execution command permits to send formatted data to the M	M2M Service.
<type>,<param_1></param_1></type>		
, <param_2>[,</param_2>	Parameters:	
,param_n]]]	<type> - type code for the type of message to send.</type>	
	0 - normal request	
	1 - method request	
	2 - method update	
	3 - method ack	
	The meaning of the following parameters ( <b><param_1></param_1></b> on the value of the first parameter <b><type></type></b> :	<param_n>) changes depending</param_n>
	Type 0 message format (API execution request):	
	<pre><param_1> - command – the API command to execute. <param_2+> - string parameters required by the method, i They are key-value pairs indicating the i-th parameter, does not require input variables, these parameters can be </param_2+></param_1></pre>	with i=0,,12. If the current API
	Type 1 message format (remote method execution reque	est):
	<pre>&gt;param 1&gt; - "thingKey" - the key of a thing to execute.</pre>	
	<pre><pre>&gt; - timeout - time to wait in milliseconds before <pre>&gt; - timeout - time to wait in milliseconds before <pre>param_3&gt; - method - the method key of a thing to execute </pre></pre></pre></pre>	
	$<$ param_4> - is <i>singleton</i> – 0 or 1. 1 if no more than one of	of these instances can exist.
	<pre><pre>ram 5+&gt; - string parameters required by the method, it</pre></pre>	
	They are key-value pairs indicating the i-th parameter,	
	method does not require input variables, these parameter	
	Type 2 message format (method update):

80000ST10025a Rev. 24 - 2016-09-07

<mark>#DWSEND – send d</mark>	ata to M2M Service SELINT 2
	<pre><param_1> - id - the identification of the method instance. <param_2> - message - a message represents the current status of the method.</param_2></param_1></pre>
	Type 3 message format (method acknowledgement):
	<pre><pre><pre><pre><pre><pre><pre><pre></pre></pre></pre></pre></pre></pre></pre></pre>
	<ul> <li>Note: there is no limit on the length of the single <param_i>, but there is a limit in the total length of the AT command string, that cannot exceed 400 characters. If this threshold is exceeded, then an ERROR is raised.</param_i></li> <li>There is also a limit of 20 messages on the receive queue. If the queue is full, the consequent send will still succeed but the response for that particular request will be dropped until an item is removed from this queue (See command AT#DWRCV and AT#DWRCVR).</li> <li>Note: the response to the AT#DWSEND command reports the <msgid> value that identifies the sending.</msgid></li> </ul>
	<ul> <li>the sending.</li> <li>Note: if data are successfully sent, then the response is OK.</li> <li>If data sending fails for some reason, an error code is reported.</li> <li>Note: it's possible to use AT#DWSEND only if the connection has been opened with</li> </ul>
AT#DWSEND=?	AT#DWCONN.  Test command reports the maximum length of <b><type></type></b> parameter.

#### 3.5.7.25.5. Send raw data to deviseWISE server - #DWSENDR

#DWSENDR – send raw data to M2M Service SELINT		<mark>SELINT 2</mark>
AT#DWSENDR= <datalen></datalen>	Execution command permits to send raw data Content must be valid JSON.	to the M2M Service.
	Parameters: <b>dataLen&gt;</b> - number of bytes to be sent Range: 1 - 1500	
	The module responds to the command with the <greater_than><space> and waits for the data When <b><datalen></datalen></b> bytes have been sent, opera</space></greater_than>	to send.

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 705 of 717

80000ST10025a Rev. 24 - 2016-09-07

	completed. If data are successfully sent, then the response is OK. If data sending fails for some reason, an error code is reported.
	Note: the response to the <b>AT#DWSENDR</b> command reports the <b><msgid></msgid></b> value that identifies the sending. There is also a limit of 20 messages on the receive queue. If the queue is full, the consequent send will still succeed but the response for that particular request will be dropped until an item is removed from this queue (See command AT#DWRCV and AT#DWRCVR).
	Note: it's possible to use <b>AT#DWSENDR</b> only if the connection has been opened with <b>AT#DWCONN</b>
AT#DWSENDR=?	Test command reports the supported range of values for <b><datalen></datalen></b> parameter

### 3.5.7.25.6. Receive data from deviseWISE server - #DWRCV

#DWRCV – Receive data fr	om M2M Service SELINT	<mark>Г 2</mark>
AT#DWRCV= <msgid></msgid>	Execution command permits the user to read formatted data arriving f M2M Service; the module is notified of these data by the URC <b>#DWRING</b> .	ìrom
	Parameters: <b>msgId&gt;</b> - index of the data message to receive, as indicated in the U <b>#DWRING</b> Range: >=1	RC
	If the received data are the consequence of a previous data sending is by <b>AT#DWSEND</b> , then the <b><msgid></msgid></b> value is the same of the <b><msgi< b=""> value reported in the answer of <b>AT#DWSEND</b>.</msgi<></b>	
	The incoming Server data are notified by the URC <b>#DWRING</b> with t following format:	he
	#DWRING: <type>,<msgid>,<len></len></msgid></type>	
	where:	
	<type> - type of message to receive <msgid> - index of the data message to receive <len> - length of data message to receive</len></msgid></type>	
	If the incoming data are accepted with <b>AT#DWRCV</b> , then the format data are received and showed with the following URC:	tted
	#DWDATA:	

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 706 of 717

80000ST10025a Rev. 24 - 2016-09-07

<b>#DWRCV – Receive data from</b>	M2M Service SELINT 2
<mark>#DWRCV – Receive data from</mark>	<pre><msgid>,<error>,<len>,<param_1>[,<param_2>[,[,<param_n>]]] where: <msgid> - defined as above <error> - error code of the message to receive, 0 if there is no error. <len> - defined as above <param_i> - string parameter indicating the i-th parameter associated to the type specified Note: it is possible to use AT#DWRCV only if the connection has been opened with AT#DWCONN, else the ME is raising an error.</param_i></len></error></msgid></param_n></param_2></param_1></len></error></msgid></pre>
	If the data received are the consequence of a previous data sending issued by <b>AT#DWSEND</b> , then they can be read only using <b>AT#DWRCV</b> command and not <b>AT#DWRCVR</b> command (i.e.: <b>AT#DWRCV</b> and <b>AT#DWRCVR</b> are not interchangeable).
AT#DWRCV=?	Test command reports the supported range of values for all parameters.

## 3.5.7.25.7. Receive raw data from deviseWISE server - #DWRCVR

<b>#DWRCVR – Receive raw da</b>	ta from M2M Service	SELINT 2
AT#DWRCVR= <msgid></msgid>	Execution command permits the user to read raw data and Service; the module is notified of these data by the URC	
	Parameters: <b>msgId&gt;</b> - index of the data message to receive, as indic <b>#DWRING</b> Range: >=1	ated in the URC
	If the data received are the consequence of a previous da by <b>AT#DWSENDR</b> ), then the <b><msgid></msgid></b> value is the sam <b><msgid></msgid></b> value reported in the answer of <b>AT#DWSEND</b>	ne of the
	The incoming Server data are notified by the URC <b>#DW</b> following format:	<b>RING</b> with the
	#DWRING: <type>,<msgid>,<len></len></msgid></type>	
	where: <type> - type of the data message to receive <msgid> - index of the data message to receive <len> - length of data message to receive</len></msgid></type>	
	If the incoming data are accepted with <b>AT#DWRCVR</b> , treceived and showed with the following URC:	then the data are

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2 page 707 of 717

<b>#DWRCVR – Receive ra</b>	w data from M2M Service SELINT 2	
	#DWRDATA: <msgid>,<error>,<len>,<data></data></len></error></msgid>	
	where: <b>msgId&gt;</b> - defined as above <b>error&gt;</b> - error code of the message to receive, 0 if there is no error. <b>error</b> - defined as above <b>error</b> - M2M Service data	
	Note: it is possible to use <b>AT#DWRCVR</b> only if the connection has bee opened with <b>AT#DWCONN</b> , else the ME is raising an error.	'n
	If the data received are the consequence of a previous data sending issue by <b>AT#DWSENDR</b> , then they can be read only using <b>AT#DWRCVR</b> command and not <b>AT#DWRCV</b> command (i.e.: <b>AT#DWRCV</b> and <b>AT#DWRCVR</b> are not interchangeable).	d
AT#DWRCVR=?	Test command reports the supported range of values for all parameters.	

#### List information on messages pending from deviseWISE server - #DWLRCV 3.5.7.25.8.

<b>#DWLRCV – List informati</b>	ion on messages pending from M2M Service SELINT 2
AT#DWLRCV	Execution command permits the user to obtain information regarding the messages pending from M2M Service in the following format: #DWLRCV: <msg_number>[,<msgid_1>,<msg_1_len>[,<msgid_2>,<msg_2_len>[, <msgid_n>,<msg_n_len>]]] where: <msg_number> - number of messages pending from M2M Service</msg_number></msg_n_len></msgid_n></msg_2_len></msgid_2></msg_1_len></msgid_1></msg_number>
	Range: >=0 <msgid_i> - index of the i-th data message to receive <msg_i_len> - length of the i-th data message to receive Note: it is possible to use AT#DWLRCV only if the connection has been opened with AT#DWCONN, else the ME is raising an error.</msg_i_len></msgid_i>
AT#DWLRCV=?	Test command reports <b>OK</b> result code

#### 3.5.7.25.9. **Enable agentfeatures - #DWEN**

Reproduction forbidden without Telit Communications S.p.A. written authorization - All Rights Reserved Mod. 0809 2011-07 Rev.2

page 708 of 717

Set command permits to enable/disable up to 8 different deviceWISE
reatures.
Parameters:
< <b>feat&gt;</b> - feature to enable or disable; range (0-7)
0 – remote at commands
$1 \dots 7$ – reserved for future use.
<en> - enable or disable the features</en>
0 - disable the feature
1 – enable the feature
<optionx> where X=1,,5 - optional parameters depending on the feature (string)</optionx>
Note: feature 0 (Remote AT commands) has no option.
Note: the <b><en></en></b> value is considered only at the very first connection to M2M Service ( <b>AT#DWCONN=1</b> ) after a device power on or reboot.
Read command returns the current settings for each feature in the format:
#DWEN:
<feat>,<en>,<option1>,<option2>,<option3>,<option4>,<option5></option5></option4></option3></option2></option1></en></feat>
Test command reports the supported range of values for parameters <b><feat></feat></b> and <b><en></en></b> and the maximum length of <b><optionx></optionx></b> (where X=1,,5) parameters

# 4. List of acronyms

ARFCN	Absolute Radio Frequency Channel Number
AT	Attention command
BA	BCCH Allocation
BCCH	Broadcast Control Channel
CA	Cell Allocation
CBM	Cell Broadcast Message
CBS	Cell Broadcast Service
CCM	Current Call Meter
CLIR	Calling Line Identification Restriction
CTS	Clear To Send
CUG	Closed User Group
DCD	Data Carrier Detect
DCE	Data Communication Equipment
DCS	Digital Cellular System
DGPS	Differential GPS, the use of GPS measurements, which
2015	are differentially corrected
DNS	Domain Name System
DSR	Data Set Ready
DTE	Data Terminal Equipment
DTMF	Dual Tone Multi Fraquency
DTR	Data Terminal Ready
GGA	GPS Fix data
GLL	Geographic Position – Latitude/Longitude
GLONASS	Global positioning system maintained by the Russian
	Space Forces
GMT	Greenwich Mean Time
GNSS	Any single or combined satellite navigation system (GPS,
	GLONASS and combined GPS/GLONASS)
GPRS	Global Packet Radio Service
GPS	Global Positioning System
GSA	GPS DOP and Active satellites
GSM	Global System Mobile
GSV	GPS satellites in view
HDLC	High Level Data Link Control
HDOP	Horizontal Dilution of Precision
IMEI	International Mobile Equipment Identity
IMSI	International Mobile Subscriber Identity
IP	Internet Protocol
IRA	International Reference Alphabet
IWF	Interworking Function
ME	Mobile Equipment
МО	Mobile Originated
